MECHANICAL SYMBOLS

NOT ALL SYMBOLS ARE NECESSARILY USED ON THIS PROJECT

(A)	AIR DEVICE DESIGNATION	12x12	DUCT (SIZE IN INCHES, FIRST FIG. SIDE SHOWN)
(T)	THERMOSTAT		90 DEGREE RECTANGULAR ELBOW UP
	PIPE CAP OR BLIND FLANGE		90 DEGREE RECTANGULAR ELBOW DOWN
	RISER DOWN (ELBOW)		DUCT SECTION - SUPPLY
	RISER UP (ELBOW)	— CD —	CONDENSATE DRAIN LINE
(R)	INDICATING LIGHT (R=RED: Y=YELLOW: G=GREEN)		POINT OF CONNECTION - NEW TO EXISTING
— F —	FIRE LINE		FLOW DIRECTION
— PD —	PUMP DISCHARGE LINE		DUCT SECTION - EXHAUST, RETURN, OUTSIDE OR RELIEF
— D —	DRAIN LINE	[S]	CARBON MONIXIDE SENSOR
	FIRE HOSE VALVE		ROADWAY DRAIN

ABBREVIATIONS AND SERVICE DESIGNATIONS

AC	ABOVE CEILING
ACFM	ACTUAL CUBIC FEET PER MINUTE
AD	AIR DRYER
AMB	AMBIENT
AMP	AMPERE
ARCH	ARCHITECTURE
ASR	AUTOMATIC SPRINKLER RISER
AUX	AUXILIARY
AVG	AVERAGE
AFF	ABOVE FINISHED FLOOR
BE	BOTTOM ELEVATION
BF	BELOW FLOOR, BOILER FEEDWATER
BFC	BELOW FINISHED CEILING
BFF	BELOW FINISHED FLOOR
BG	BELOW GRADE
BLDG	BUILDING
BOD	BOTTOM OF DUCT
BOP	BOTTOM OF PIPE
BOT	BOTTOM
BTUH	BRITISH THERMAL UNITS PER HOUR
BYP	BYPASS
C/B	CIRCUIT BREAKER
CAP	CAPICITY
CFH	CUBIC FEET PER HOUR
CFM	CUBIC FEET PER MINUTE
CIP	CAST IRON PIPE
CKT	CIRCUIT
CL	CENTER LINE
CLG	CEILING
CO	CLEAN OUT
COL	COLUMN
COND'S	CONDITIONS
CONN	CONNECTION
CU	CONDENSING UNIT
DET	DETAIL
DF	DRINKING FOUNTAIN
DIA	DIAMETER
DISCH	DISCHARGE
DN	DOWN
DWG	DRAWING
DS	DOWNSPOUT (STORM SEWER)
D	DRAIN
E	EXISTING
EA	EACH
EAT	ENTERING AIR TEMPERATURE
EDH	ELECTRIC DUCT HEATER
EF	EXHAUST FAN
EFF	EFFICIENCY
ELEC	ELECTRICAL
EP	EXPLOSION PROOF
ENT	ENTERING
EUH	ELECTRIC UNIT HEATER
EXP	EXPANSION
EXT	EXTERNAL
ELEV	ELEVATION
EWC	ELECTRICAL WATER COOLER
FCU	FAN COIL UNIT
F	FAHRENHEIT
FCO	FLOOR CLEANOUT
FD	FIRE DAMPER
FD-1	FLOOR DRAIN, TYPE 1
FDC	FIRE DEPARTMENT CONNECTION
FEXT	FIRE EXTINGUISHER
FLEX	FLEXIBLE
FPB	FAN POWER BOX
FPI	FINS PER INCH
FPM	FEET PER MINUTE
FPS	FEET PER SECOND
FT	FOOT, FEET
FT2	SQUARE FEET
FLA	FULL LOAD AMPERES
FS	FREEZE STAT
FEC	FIRE EXTINGUISHER CABINET
G	GAS LOW PRESSURE
GA	GAGE
GAL	GALLON
GCO	GRADE CLEANOUT
GPM	GALLONS PER MINUTE
GPH	GALLONS PER HOUR
HAD	HEAT ACTUATING DEVICE
HD	HUB DRAIN
HGT	HEIGHT
HORI	HORIZONTAL
HP	HORSEPOWER
HZ	HERTZ
IE	INVERT ELEVATION
IN	INCH
KW	KILOWATT
LAT	LEAVING AIR TEMPERATURE
LG	LENGTH
LVG	LEAVING
MAN	MANUAL
MAX	MAXIMUM
MECH	MECH
MIN	MINIMUM, MINUTE
MVD	MANUAL VOLUME DAMPER
NO	NORMALLY OPEN, NUMBER
NTS	NOT TO SCALE
NC	NORMALLY CLOSED, NOISE CRITERIA
OA	OUTSIDE AIR
OBD	OPPOSED BLADE DAMPER
OD	OVERFLOW DRAIN
PC	PUMPED CONDENSATE
PH	PHASE
3PH	THREE PHASE
PL	PLACES
PRESS	PRESSURE
PRV	PRESSURE REDUCING VALVE
PSI	POUNDS PER SQUARE INCH
PW	POTABLE (DOMESTIC) WATER
R	RETURN, RED
RA	RETURN AIR
RD	ROOF DRAIN
RECIRC.	RECIRCULATING
RH	RELATIVE HUMIDITY
RM	ROOM
RPM	REVOLUTIONS PER MINUTE
RRT	REMOTE RESET THERMOSTAT
RT	RAINTIGHT
RTU	ROOF TOP UNIT
S	SUPPLY
SS	SANITARY SEWER
SC	SCALE
SD	STORM SEWER
SECT	SECTION
SENS	SENSIBLE
SF	SUPPLY FAN
SOL	SOLENOID
SP	STATIC PRESSURE
SA	SUPPLY AIR
TEMP	TEMPERATURE
TYP	TYPICAL
UH	UNIT HEATER
UL	UNDERWRITERS LAB
V	VENT, VOLT
VA	VALVE
VEL	VELOCITY
VERT	VERTICAL
VF	VENT FAN
VTR	VENT THRU ROOF
WB	WET BULB
WCO	WALL CLEANOUT
WG	WATER GAUGE

GENERAL NOTES:

A. ALL LOCATION OF EXISTING PIPING, DUCT AND EQUIPMENT ARE APPROXIMATE AND SHALL BE FIELD VERIFIED BY THE CONTRACTOR PRIOR TO COMMENCEMENT OF WORK. CONTRACTOR SHALL NOTIFY OWNERS REPRESENTATIVE IN WRITING IF CONDITIONS ARE FOUND TO BE DIFFERENT THAN SHOWN ON THE DRAWING BEFORE PROCEEDING.

B. BEFORE ENERGIZING NEW EQUIPMENT OR CONNECTING TO EXISTING POWER SOURCES, THE CONTRACTOR SHALL COORDINATE WITH THE OWNER'S REPRESENTATIVE.

C. ALL WORK IS NEW UNLESS OTHERWISE INDICATED TO BE EXISTING, REMOVED OR RELOCATED.

D. COMPLY WITH APPLICABLE CODES AND STANDARDS AS INDICATED IN SPECIFICATION SECTION 15011.

E. PROVIDE ALL NEW PIPING WITH NEW NAME LABELS AND COLOR CODING TO CORRELATE TO THE DESIGNATION USED ON THE DRAWINGS.

F. ALL STATIONING AND DIMENSIONAL INFORMATION IS APPROXIMATE AND SHALL BE FIELD VERIFIED AND COORDINATED WITH ALL OTHER TRADES PRIOR TO CONSTRUCTION.

KEY NOTES:

1. FASTEN THE CARBON MONOXIDE SENSOR ACCORDING TO THE MANUFACTURERS RECOMMENDATIONS.
2. COORDINATE WITH THE ELECTRICAL CONTRACTOR. PULL CONTROL WIRING IN CONDUIT AND J-BOXES PROVIDED BY ELECTRICAL CONTRACTOR.
3. THE RECESS IS SIZED FOR THE SENSOR SPECIED. IF AN ALTERNATE MANUFACTURED IS USED, COORDINATE SIZE OF RECESS WITH GENERAL CONTRACTOR PRIOR TO CONSTRUCTION OF WALKWAY. RECESS SHALL BE OF SUFFICIENT SIZE TO ALLOW REMOVAL AND REPLACEMENT OF SENSOR
4. PROVIDE AND INSTALL 1X1X3/8" ANGLE INSIDE THE CURB OPENING TO SUPPORT THE DUCT. LOCATE AND SEAL ACCORDING TO THE MANUFACTURER'S CURB DETAIL.
5. PROVIDE AND INSTALL 1X1X3/8" ANGLE TO SPAN THE BOTTOM OF THE ROOF DECK OPENING FOR DUCT AND AIR DEVICE SUPPORT. MATCH THE SUPPORT PATTERN USED AT THE TOP OF THE DUCTS.
6. SEAL CURB ACCORDING TO MANUFACTURER'S RECOMMENDATIONS. PROVIDE SPACER ALONG TOP OF CURB IF NECESSARY TO MAINTAIN 1/4" + GAP BETWEEN THE CURB AND CABINET PERIMETER FLANGE.

PROVIDE CONTROL PANEL IN STAINLESS STEEL WEATHERPROOF CABINET WITH LOCKING COVER. LOCATE IN THE ELECTRIC ROOM AT THE WEST PORTAL.

2 / P141 - VENTILATION FAN CONTROL PANEL
NO SCALE

GENERAL NOTES:

A. MOUNT FAN STARTERS ON NORTH WALL OF TUNNEL.

B. VENTILATION FAN CONTROL PANEL IN ELECTRICAL ROOM AT WEST PORTAL OVERRIDES ALL OTHER CONTROLS.

C. INPUT FROM FIRE ALARM SYSTEM INCLUDES PULL STATIONS AND HEAT DETECTORS.

D. PROVIDE AN EMPTY 2" CONDUIT FROM THE TOLL PLAZA AREA TO THE VENTILATION CONTROL PANEL IN ELECTRICAL ROOM AT WEST PORTAL FOR FUTURE INPUT FROM REMOTE MONITORING STATION.

E. A SIGNAL FROM A PULL STATION OR HEAT DETECTOR EAST OF STA. 18+00 SHALL START ALL TUNNEL VENTILATION FANS IN THE "DISCHARGE EAST" MODE. A SIGNAL FROM A PULL STATION OR HEAT DETECTOR WEST OF STA. 18+00 SHALL START ALL TUNNEL VENTILATION FANS IN THE "DISCHARGE WEST" MODE. IF SIGNALS ARE RECEIVED FROM HEAT DETECTORS OR PULL STATIONS ON BOTH SIDES OF STATION 18+00, ALL TUNNEL VENTILATION FANS SHALL GO TO THE "DISCHARGE "WEST" MODE.

F. A SIGNAL FROM ANY CARBON MONOXIDE SENSOR SHALL START ALL TUNNEL VENTILATION FANS IN THE DISCHARGE WEST MODE.

G. PROVIDE ALL CONDUIT, WIRING, TRANSFORMERS, RELAYS AND DEVICES NECESSARY FOR A COMPLETE AND OPERATING FAN CONTROL SYSTEM WITH OPERATING SEQUENCE AS INDICATED ABOVE.

H. PROVIDE A 30 SECOND DELAY BETWEEN ANY FAN REVERSAL, WHETHER FROM THE FIRE ALARM SYSTEM INPUT OR MAIN CONTROL PANEL INPUT.

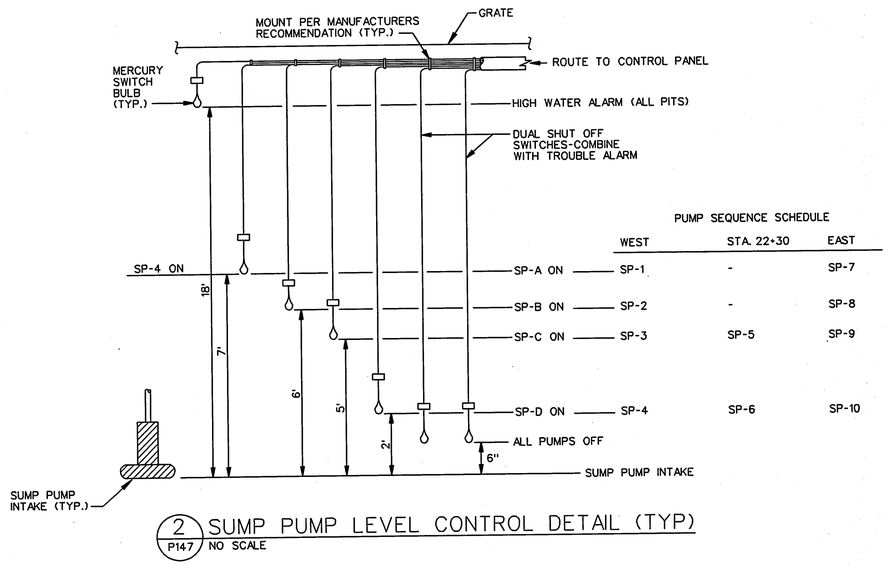
1 / P147 SUMP PUMP CONTROL SCHEMATIC
NO SCALE



2 / P147 SUMP PUMP LEVEL CONTROL DETAIL (TYP)
NO SCALE

SEQUENCE OF OPERATION:

PROVIDE EACH PUMP WITH AN H-O-A SWITCH AT THE PUMP CONTROL PANEL. THE FOLLOWING SEQUENCE OCCURS FOR EACH SWITCH POSITION.

AUTO POSITION

1. AS THE SUMP PIT WATER LEVEL RISES ABOVE 6IN. THE "ALL PUMPS OFF" BULB SWITCH CLOSES.
2. AS THE SUMP PIT WATER LEVEL RISES ABOVE 2 FT. THE "SP-D" BULB SWITCH CLOSES AND THE RELATED PUMP STARTS.
3. OPERATION 2 IS REPEATED FOR "SP-C", "SP-B" AND "SP-A" BULB SWITCHES AS WATER LEVEL REACHES TABLE LEVELS RESPECTIVELY.
4. AS WATER LEVEL REACHES 18 FT. THE HIGH WATER ALARM IS ACTIVATED.
5. ALL PUMPS STARTED WILL REMAIN ON UNTIL THE, SUMP PIT WATER LEVEL IS LOWERED TO 1 FT. OR UNTIL OVERLOAD CONTACTS ARE OPENED, OR UNTIL MANUALLY DISCONNECTED.

OFF POSITION

1. PUMPS ARE OFF REGARDLESS OF WATER LEVEL WHEN ALL PUMP CONTROLS ARE IN THE OFF POSITION.
2. EACH PUMP MAY BE INDIVIDUALLY PLACED IN THE OFF POSITION, DISABLING THE PUMP.

HAND POSITION

1. PUMPS ARE ON REGARDLESS OF WATER LEVEL WHEN PUMP CONTROLS ARE IN THE HAND POSITION.
2. EACH PUMP MAY BE INDIVIDUALLY PLACED IN THE HAND POSITION, ENABLING THE PUMP.

W	DUALITE-N4X4I-HEAT-40G HUBBELL N46-25-2-MOD	277V	2	SELF-CONTAINED H7553 12 WATT HALOGEN	SUSPENDED/CHAIN (8'-0" A.F.F.)	SUPPLEMENTAL EMERGENCY LIGHTING: PROVIDE COMPLETE WITH SELF DIANOSTICS, WIRE GUARD, HEATER OPTION, PURE LEAD BATTERY. CONTRACTORSHALL PROVIDE WALL-MOUNT BRACKET AND FIELD ADJUST HEADS SO AS TO ILLUMINATE WALKWAYS.
X	DUALITE EX 21XOI HUBBELL D42 SERIES	277V	NA	SELF-CONTAINED	SURFACE/WALL CEILING (UNIVERSAL)	EXIT LIGHT: EMERGENCY VANDAL PROOF EXIT WITH SELF DIANOSTICS, PURE LEAD BATTERY

LIGHTING FIXTURE SCHEDULE NOTES:

1. TUNNEL ILLUMINATION IS BASED ON LUMINANCEVALUES IN ACCORDANCE WITH IES/ANSI STANDARD RP-22-87, MEASURED IN CD/M2 LIGHTING DESIGN IS BASED ON FIXTURE AS SCHEDULES. COMPUTER GENERATED STATISTICAL POINT-BY-POINT LUMINANCE/PHOTOMETRIC CALCULATION DATA SCALE DRAWING SHALL BE SUBMITTED FOR REVIEW AND APPROVAL AS SHOP DRAWING DATA.
2. FIXTURE LOCATED AT EXTERIOR OF ELECTRICAL ROOM SHALL BE MOUNTED 6 INCHES CLEAR BELOW ROOF LINE, OR 8'-0" ABOVE FINISHED FLOOR/GRADE.
3. PIT LIGHTING SHALL BE MOUNTED 6 INCHES MINIMUM BELOW INSTALLED GRATE.
4. COORDINATE/VERIFY FIXTURE LAMP DATA WITH MANUFACTURER PRIOR TO OPERATING.

GENERAL NOTES:

A. ALL ELECTRICAL INSTALLATIONS SHALL CONFORM TO THE LATEST EDITION OF THE NATIONAL ELECTRICAL CODE, NATIONAL ELECTRICAL SAFETY CODE, NATIONAL FIRE PROTECTION ASSOCIATION, UNDERWRITERS LABORATORIES, LOCAL AND STATE CODES, AS ADOPTED BY THE CITY OF ADDISON: SEE SPECIFICATIONS.

B. ALL DRAWINGS ARE DIAGRAMMATIC REPRESENTATIONS: COORDINATE/VERIFY EXACT LOCATIONS OF LIGHTING FIXTURES, DEVICES, EQUIPMENT, ETC., AS INDICATED WITH OTHER DISCIPLINES, TUNNEL STRUCTURAL PLANS, EQUIPMENT AND APPURTENANCES.

C. ALL ELECTRICAL PROVISIONS/APPURTENANCES PROVIDED BY THESE DRAWINGS SHALL BE CORROSION RESISTANT/WEATHERPROOF. CONDUIT UTILIZED THROUGHOUT THIS PROJECT SHALL BE ¾" MINIMUM, UNLESS INDICATED OTHERWISE.

D. HOMERUNS TO PANELBOARD SHALL UTILIZE NO. 10 AWG CONDUCTORS UNLESS INDICATED OTHERWISE OR BY SPECIFICATIONS: EMPTY CONDUIT SHALL BE PROVIDED WITH PULL-WIRE.

E. CONDUIT SHALL BE PVC COATED GALVANIZED RIGID STEEL (GRS) EMBEDDED IN CONCRETE WHERE POSSIBLE, AND PROPERLY SECURED IN PLACE (DUE TO CONCRETE PLACEMENT UNDER HIGH-PRESSURE/MACHINERY): COORDINATE WITH STRUCTURAL CONTRACTOR. ALL EXPOSED CONDUIT AND STUB-UPS SHALL BE GRS, UNLESS INDICATED OTHERWISE.

F. LIGHTING, POWER, COMMUNICATIONS, EMERGENCY, FIRE ALARM, LIFE SAFETY SYSTEMS ARE SEPARATE SYSTEMS AND SHALL BE PROVIDED WITH THEIR OWN CONDUIT, FITTINGS AND APPURTENANCES: I.E., RACEWAY SYSTEMS SHALL NOT BE SHARED.

G. WHERE FEEDERS ARE IN EXCESS OF 400 FT. AND/OR CONDUIT RUNS REQUIRE 360 DEGREE OR MORE OF BENDING RADIUS, PULL-BOXES SHALL BE PROVIDED IN ACCORDANCE WITH THE NATIONAL ELECTRICAL.

GENERAL NOTES:

A. FIXTURES SHALL BE LOCATED AT STATIONS AS SHOWN UNLESS INDICATED OTHERWISE. IN GENERAL, FIXTURE SPACING BEGINS AT BOTH THE WEST AND EAST PORTALS AND PROGRESSES TOWARDS THE TUNNEL MIDPOINT. CIRCUITING NOT INDICATED ON THIS PLAN FOR CLARITY: REFERENCE DETAIL 1/E165, "TYPICAL TUNNEL LIGHTING PLAN" FOR TYPICAL CIRCUIT.

B. REFERENCE DETAIL 2/E166, "TYPICAL TUNNEL CONDUIT SYSTEM DETAIL" FOR GENERAL CONDUIT ROUTING INFORMATION.

C. BRANCH CIRCUITS SERVING BOTH 480 VOLT, SINGLE-PHASE LIGHTING FIXUTRES AND 277 VOLT, SINGLE-PHASE LIGHTING FIXTURES SHALL BE PROVIDED WITH NEUTRAL CONDUCTOR(S).

D. TUNNEL LIGHTING IS REDUCED DURING NIGHT-TIME HOURS BY SWITCHING-OFF FEEDERS SERVING PANELBOARD FOR SELECTED FIXTURES. PROVIDE CONTACTOR CONTROLLED BY PHOTO-ELECTRIC CELL FOR EACH PANELBOARD INDICATED; SEE DETAIL 1/E161 AND 4/E167 FOR FURTHER INFORMATION.

KEY NOTES:

1. ① WEATHERPROOF IG RECEPTACLE (TAYMACK #10370 OR EQUAL)FOR SECURITY CAMERA. RECEPTACLE SHALL BE SERVED FROM PANELBOARD "LWA-2". EXTEND CONDUCTORS AND PROVIDE PULL BOXES AS REQUIRED. REFER TO SHEET 2/E160 FOR ADDITIONAL INFORMATION. VERIFY EXACT LOCATION WITH SECURITY CONSULTANT PRIOR TO INSTALLATION.

GENERAL NOTES:

A. FIXTURES SHALL BE LOCATED AT STATIONS AS SHOWN UNLESS INDICATED OTHERWISE. IN GENERAL, FIXTURE SPACING BEGINS AT BOTH THE WEST AND EAST PORTALS AND PROGRESSES TOWARDS THE TUNNEL MIDPOINT. CIRCUITING NOT INDICATED ON THIS PLAN FOR CLARITY: REFERENCE DETAIL 1/E165, "TYPICAL TUNNEL LIGHTING PLAN" FOR TYPICAL CIRCUIT.

B. REFERENCE DETAIL 2/E166, "TYPICAL TUNNEL CONDUIT SYSTEM DETAIL" FOR GENERAL CONDUIT ROUTING INFORMATION.

C. BRANCH CIRCUITS SERVING BOTH 480 VOLT, SINGLE-PHASE LIGHTING FIXUTRES AND 277 VOLT, SINGLE-PHASE LIGHTING FIXTURES SHALL BE PROVIDED WITH NEUTRAL CONDUCTOR(S).

D. TUNNEL LIGHTING IS REDUCED DURING NIGHT-TIME HOURS BY SWITCHING-OFF FEEDERS SERVING PANELBOARD FOR SELECTED FIXTURES. PROVIDE CONTACTOR CONTROLLED BY PHOTO-ELECTRIC CELL FOR EACH PANELBOARD INDICATED: SEE DETAIL 1/E161 AND 4/E167 FOR FURTHER INFORMATION.

KEY NOTES:

1. WEATHERPROOF, IG RECEPTACLE (TAYMAC *10370 OR EQUAL)FOR SECURITY CAMERA. RECEPTACLE SHALL BE SERVED FROM PANELBOARD "LWA-2". EXTEND CONDUCTORS AND PROVIDE PULL BOXES AS REQUIRED. REFER TO SHEET 2/E160 FOR ADDITIONAL INFORMATION. VERIFY EXACT LOCATION WITH SECURITY CONSULTANT PRIOR TO INSTALLATION.
2. WEATHERPROOF, IG RECEPTACLE (TAYMAC *10370 OR EQUAL) FOR SECURITY CAMERA. RECEPTACLE SHALL BE SERVED FROM PANELBOARD "LCA-7". EXTEND CONDUCTORS AND PROVIDE PULL BOXES AS REQUIRED. REFER TO SHEET 4/E160 FOR ADDITIONAL INFORMATION. VERIFY EXACT LOCATION WITH SECURITY CONSULTANT PRIOR TO INSTALLATION.
3. WEATHERPROOF, IG RECEPTACLE (TAYMAC *10370 OR EQUAL) FOR SECURITY CAMERA. RECEPTACLE SHALL BE SERVED FROM PANELBOARD "LEA-6". EXTEND CONDUCTORS AND PROVIDE PULL BOXES AS REQUIRED. REFER TO SHEET 3/E160 FOR ADDITIONAL INFORMATION. VERIFY EXACT LOCATION WITH SECURITY CONSULTANT PRIOR TO INSTALLATION.

GENERAL NOTES:

A. IN GENERAL, DEVICE SPACING BEGINS AT BOTH THE EAST AND WEST ENTRIES AND PROGRESSES TOWARDS THE TUNNEL MID-POINT; DEVICE LOCATIONS SHALL BE AS INDICATED. REFERENCE MECHANICAL DRAWINGS FOR STATION LOCATIONS OF MECHANICAL EQUIPMENT AND DEVICES.

B. SEE DETAIL 2/E165, "TYPICAL TUNNEL CONDUIT SYSTEM DETAIL" FOR GENERAL CONDUIT ROUTING/CIRCUITING INFORMATION.

C. FIRE ALARM SYSTEM DEVICES, EMERGENCY TELEPHONE SYSTEM DEVICES AND CARBON MONOXIDE (CO) SYSTEM DEVICES SHALL BE PROVIDED WITH APPROPRIAT JUNCTION-BOXES/BACK-BOXES AND CONDUIT AS REQUIRED.

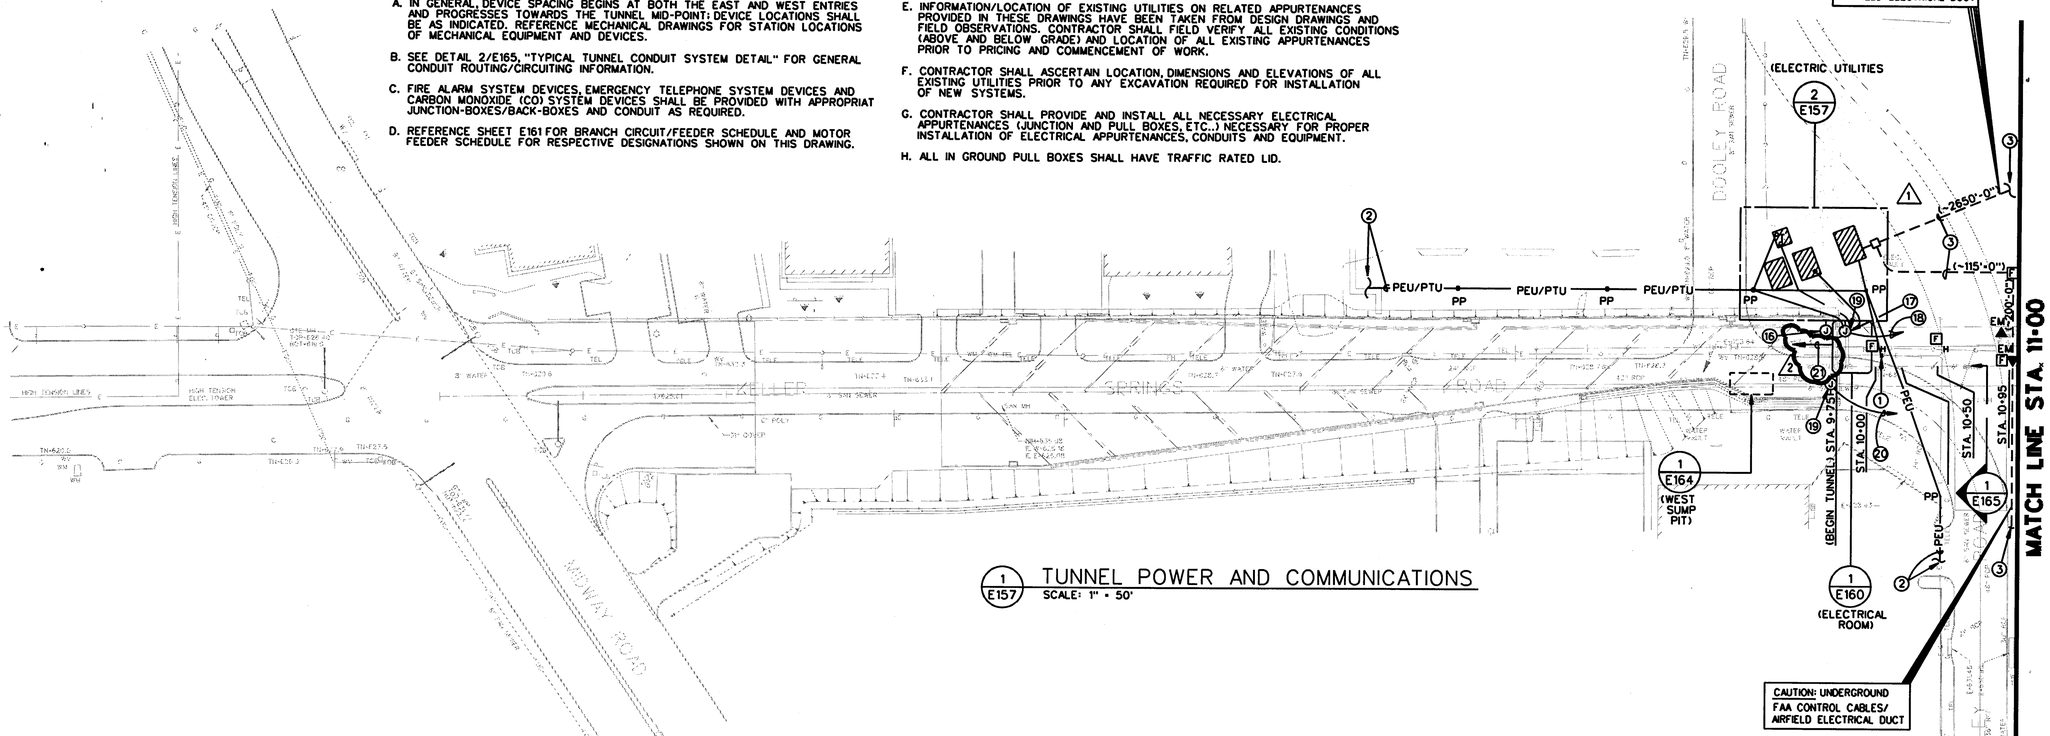
D. REFERENCE SHEET E161 FOR BRANCH CIRCUIT/FEEDER SCHEDULE AND MOTOR FEEDER SCHEDULE FOR RESPECTIVE DESIGNATIONS SHOWN ON THIS DRAWING.

E. INFORMATION/LOCATION OF EXISTING UTILITIES ON RELATED APPURTENANCES PROVIDED IN THESE DRAWINGS HAVE BEEN TAKEN FROM DESIGN DRAWINGS AND FIELD OBSERVATIONS. CONTRACTOR SHALL FIELD VERIFY ALL EXISTING CONDITIONS (ABOVE AND BELOW GRADE) AND LOCATION OF ALL EXISTING APPURTENANCES PRIOR TO PRICING AND COMMENCEMENT OF WORK.

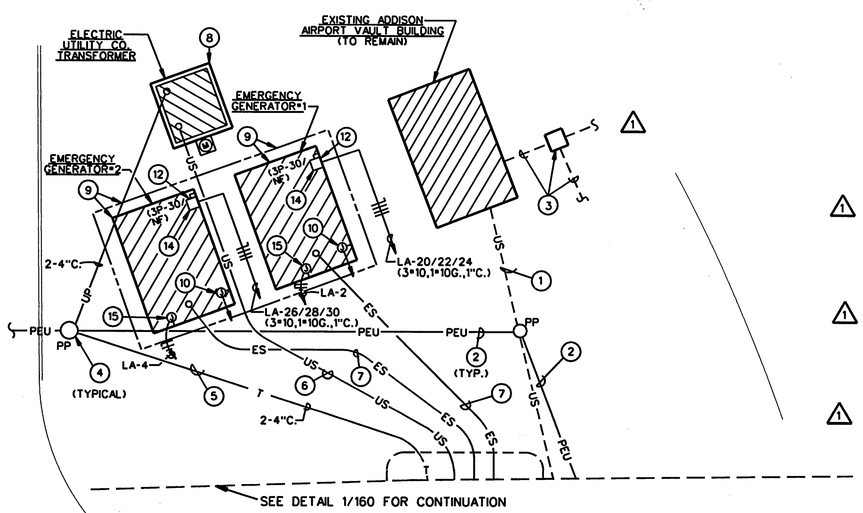
F. CONTRACTOR SHALL ASCERTAIN LOCATION, DIMENSIONS AND ELEVATIONS OF ALL EXISTING UTILITIES PRIOR TO ANY EXCAVATION REQUIRED FOR INSTALLATION OF NEW SYSTEMS.

G. CONTRACTOR SHALL PROVIDE AND INSTALL ALL NECESSARY ELECTRICAL APPURTENANCES (JUNCTION AND PULL BOXES, ETC..) NECESSARY FOR PROPER INSTALLATION OF ELECTRICAL APPURTENANCES, CONDUITS AND EQUIPMENT.

H. ALL IN GROUND PULL BOXES SHALL HAVE TRAFFIC RATED LID.



1 E157 TUNNEL POWER AND COMMUNICATIONS
SCALE: 1" = 50'



2 E157 PARTIAL SITE PLAN - ELECTRICAL
SCALE: 1" = 10'-0"

KEY NOTES:

1. EXISTING ELECTRIC UTILITY DUCTBANK TO ADDISON AIRPORT ELECTRICAL VAULT.
2. PROPOSED OVERHEAD PRIMARY POWER LINES BY ELECTRIC UTILITY.
3. EXISTING AIRFIELD HAND-HOLE/MAN-HOLE AND EXISTING UNDERGROUND FAA CONTROL CABLE/AIRFIELD ELECTRICAL DUCT TO REMAIN; COORDINATE NEW CONSTRUCTION IN THIS AREA WITH EXISTING.
4. PROPOSED OVERHEAD PRIMARY POWER POLE PROVIDED AND INSTALLED BY ELECTRIC UTILITY.
5. NEW UNDERGROUND DUCT FOR TUNNEL TELEPHONE UTILITIES.
6. NEW UNDERGROUND DUCT FOR TUNNEL ELECTRICAL SERVICE TO MAIN SWITCHBOARD 'MSB'.
7. NEW UNDERGROUND DUCTS FOR TUNNEL EMERGENCY GENERATOR ELECTRICAL SERVICE TO AUTOMATIC TRANSFER SWITCH 'ATS'.
1. 8. PROPOSED PAD-MOUNTED TRANSFORMER AND WATT-HOUR METER PROVIDED AND INSTALLED BY ELECTRIC UTILITY. PROVIDE TRANSFORMER PAD IN ACCORDANCE WITH ELECTRIC UTILITY CO. STANDARDS; COORDINATE EXACT REQUIREMENTS WITH ELECTRIC UTILITY COMPANY. UNDERGROUND CONDUIT RISER FOR TRANSFORMER PRIMARY SERVICE SHALL BE PROVIDED & INSTALLED BY THE CONTRACTOR.
9. PROVIDE AND INSTALL EMERGENCY GENERATOR COMPLETE WITH WEATHER-PROOF HOUSING AND CONCRETE PAD; PAD SHALL EXTEND 3'-0" MINIMUM BEYOND HOUSING.
1. 10. EXTEND 1-1/2" CONDUIT WITH PULL-WIRE MINIMUM TO RESPECTIVE AUTOMATIC TRANSFER SWITCH "ATS" AND ANNUNCIATOR PANEL FOR GENERATOR CONTROL WIRING.
11. NOT USED.
12. BLOCK HEATER.
13. NEW UNDERGROUND TRANSFORMER PRIMARY SERVICE (2-4").
1. 14. CONTRACTOR SHALL PROVIDE AND INSTALL UNISTRUT SUPPORTS FOR PROPER INSTALLATION OF THIS DEVICE INSIDE ENCLOSURE.
15. POWER FOR GENERATOR RECEPTACLE AND ENCLOSURE LIGHTING.
16. 12"x12"x6" JUNCTION-BOX EMBEDED IN WALL. REF. 568 FOR LOCATION.
17. STUB-OUT A 2" AND 1½" GRS CONDUITS TO IN GROUND PULL-BOX (BROOKS CAT #38).
18. ½"C. AND 2"C. TO JUNCTION BOX IN ELECTRICAL ROOM REF. SHT. E160 FOR LOCATION.
19. IN GROUND PULL-BOX (BROOKS CAT #38).
20. 1½" GRS CONDUIT TO JUNCTION BOX IN ELECTRICAL ROOM REF. SHT. E160 FOR LOCATION.
2. 21. 1-2½" CONDUIT WITH PULL STRING ROUTED ALONG NORHT SIDE OF ROADWAY TO ADDISON TOLL PLAZA. PROVIDE PULL-BOX(ES) AS REQUIRED. REFER TO SHEET E160 FOR ADDITIONAL TOLL PLAZA REQUIREMENTS.

C. FIRE ALARM SYSTEM DEVICES, EMERGENCY TELEPHONE SYSTEM DEVICES AND CARBON MONOXIDE (CO) SYSTEM DEVICES SHALL BE PROVIDED WITH APPROPRIAT JUNCTION-BOXES/BACK-BOXES AND CONDUIT AS REQUIRED.

D. REFERENCE SHEET E161 FOR BRANCH CIRCUIT/FEEDER SCHEDULE AND MOTOR FEEDER SCHEDULE FOR RESPECTIVE DESIGNATIONS SHOWN ON THIS DRAWING.

E. INFORMATION/LOCATION OF EXISTING UTILITIES ON RELATED APPURTENANCES PROVIDED IN THESE DRAWINGS HAVE BEEN TAKEN FROM DESIGN DRAWINGS AND FIELD OBSERVATIONS. CONTRACTOR SHALL FIELD VERIFY ALL EXISTING CONDITIONS (ABOVE AND BELOW GRADE) AND LOCATION OF ALL EXISTING APPURTENANCES PRIOR TO PRICING AND COMMENCEMENT OF WORK.

F. CONTRACTOR SHALL ASCERTAIN LOCATION, DIMENSIONS AND ELEVATIONS OF ALL EXISTING UTILITIES PRIOR TO ANY EXCAVATION REQUIRED FOR INSTALLATION OF NEW SYSTEMS.

G. CONTRACTOR SHALL PROVIDE AND INSTALL ALL NECESSARY ELECTRICAL APPURTENANCES (JUNCTION AND PULL BOXES, ETC..) NECESSARY FOR PROPER INSTALLATION OF ELECTRICAL APPURTENANCES, CONDUITS AND EQUIPMENT.

KEY NOTES:

(1) CARBON MONOXIDE (CO) SENSOR/DETECTOR PROVIDED AND INSTALLED BY MECHANICAL CONTRACTOR: FURNISH AND INSTALL JUNCTION-BOX/BACK-BOX AND CONDUIT RACEWAY SYSTEM AS REQUIRED (STANDARD 4" J-BOXES INTER-CONNECTED BY 1" CONDUIT WITH PULL-WIRE MINIMUM AND EXTENDED TO 'CO' PANEL LOCATED AT ELECTRICAL ROOM): SEE MECHANICAL DRAWINGS FOR FURTHER INFORMATION.

(2) IN GROUND PULL-BOX (BROOKS CAT#38) REFERENCE SHEET T130 FOR LOCATION.

(3) 1½"C. TO JUNCTION-BOX IN EAST ELECTRICAL NICHE 'E'.

GENERAL NOTES:

A. WHERE FEEDERS ARE IN EXCESS OF 400 FT. AND/OR CONDUIT RUNS REQUIRE 360 DEGREE OR MORE OF BENDING RADIUS, PULL-BOXES SHALL BE PROVIDED IN ACCORDANCE WITH ARTICLE 370 OF THE NATIONAL ELECTRICAL CODE, ARTICLE 370.

KEY NOTES:

(1) FULLY-RATED CIRCUIT BREAKER/ATS.

(2) PANELBOARD CONTACTOR (ASCO MODEL NO. 920-3-100-9 OR APPROVED EQUAL) CONTROLLED BY PHOTOCELL LOCATED AT EXTERIOR OF ELECTRICAL ROOM, RE: SHEET 1/E160.

(3) PANELBOARD CONTACTOR (ALSO MODEL No. 920-3-22J-9 OR APPROVED EQUAL) CONTROLLED BY PHOTOCELL LOCATED AT EXTERIOR OF ELECTRICAL RM. REF: SHEET 1/E160.

(4) ELECTRIC UTILITY CO. PROVIDED AND INSTALLED PAD MOUNTED TRANSFORMER. CONTRACTOR SHALL PROVIDE XFR PAD FOR UTILITY STDS. & PRIMARY SERVICE CONDUITS/RISER TO POLE. UTILITY CO. WILL PRIVIDE PRIMARY SERVICE CONDUCTORS TO TRANSFORMER AND WILL MAKE ALL PRIMARY AND SECONDARY CONDUCTORS CONNECTIONS TO TRANSFORMER.

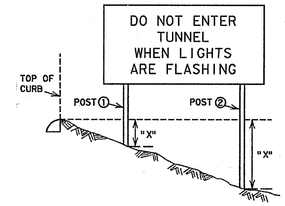
[A] CANTILEVER OVERHEAD SIGN SUPPORT

[B] STRUCTURE MOUNTED

[C] FOR CONTRACTOR'S INFORMATION ONLY



The "X" dimension is the elevation difference at the post between the ground and the edge of pavement or top of curb.

Sign supports shall be located as shown on the plans, except that the Engineer may shift the sign supports, within design guidelines, where necessary to secure a more desirable location or to avoid conflict with utilities. Unless otherwise shown on the plans, the Contractor shall stake and the Engineer will verify all sign support locations.

The post lengths listed here are approximations, The corrected post lengths will be furnished by the Engineer after the contractor has placed the stud posts.

Tower heights shall be verified with the Engineer before fabrication.

THE SEAL APPEARING ON THIS DOCUMENT WAS AUTHORIZED BY RICHARD K. LAIRD, P.E. NO. 59187 ON JANUARY 12, 1999. ALTERATION OF A SEALED DOCUMENT WITHOUT PRIOR NOTIFICATION TO THE RESPONSIBLE ENGINEER IS AN OFFENSE UNDER THE TEXAS ENGINEERING PRACTICE ACT.

Sign supports shall be located as shown on the plans, except that the Engineer may shift the sign supports, within design guidelines, where necessary to secure a more desirable location or to avoid conflict with utilities. Unless otherwise shown on the plans, the Contractor shall stake and the Engineer will verify all sign support locations.

Reflective sheeting will be designated as:

Type C - High Specific Intensity

* FOR STRUCTURE MOUNTING DETAILS, SEE SHEETS 15 THRU 17.

Note:

1. The DNT and the Addison Toll Tunnel Logo Sign Trailblazers will come from the NTTA for installation by the contractor.

THE SEAL APPEARING ON THIS DOCUMENT WAS AUTHORIZED BY RICHARD K. LAIRD, P.E. NO. 59187 ON JANUARY 12, 1999. ALTERATION OF A SEALED DOCUMENT WITHOUT PRIOR NOTIFICATION TO THE RESPONSIBLE ENGINEER IS AN OFFENSE UNDER THE TEXAS ENGINEERING PRACTICE ACT.

NO. & SIZE OF H.S. BOLTS IN CHORD ANGLE TO TOWER CONNECTION PLATE	4~ 5/8"ϕ	4~ 5/8"ϕ or 3~ 3/4"ϕ ea.	6~ 5/8"ϕ or 5~ 3/4"ϕ ea.	6~ 5/8"ϕ or 5~ 3/4"ϕ ea.	9~ 5/8"ϕ or 7~ 3/4"ϕ ea.

All truss members are angles.

Number of High Strength bolts required in truss connection or splice are indicated thus ③ after the member size.

Deflections shown include the design loads for Truss, Sign Panel, Lights and Walkways.

GENERAL NOTES:

Steel for tower pipe shall conform to ASTM A53 Grade B or to ASTM A501. Tower pipe wall thickness shown is the minimum allowable. Fabricator may use the wall thickness shown or pipe of the same diameter with greater wall thickness.

All other structural steel shall conform to ASTM A36 except where noted HS 50 which shall be ASTM A441, ASTM A572 or ASTM A588.

All connection bolts shall conform to ASTM A325 or ASTM A449.

All structural steel, connection bolts, nuts and washers shall be galvanized in accordance with the Specifications.

Compensate for truss deflection at free end by offsetting upper and lower bolt holes at truss-to-tower connection.

For truss details see sheet 2 of 3.

For base and foundation details see sheet 3 of 3.

For cantilever truss lengths falling between those shown use sizes called for in the next longer span.

Towers for cantilever sign supports are designed for the equivalent area of a 10 foot deep sign panel over 100% of the span length. Design includes 3 lb./□' for sign panel and 20 lb./lin. ft. for lights and 50 lb./lin. ft. for walkways all placed as specified for the design sign panel.

Details called for hereon are applicable for Design Wind Heights up to 30' inclusive.

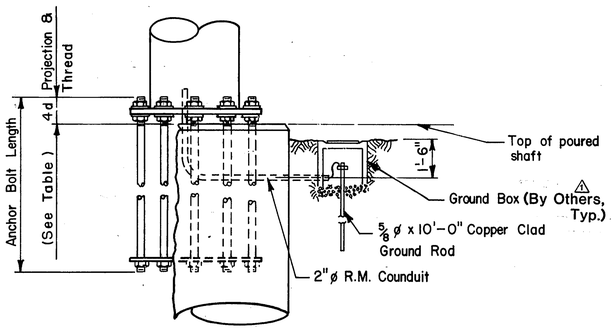
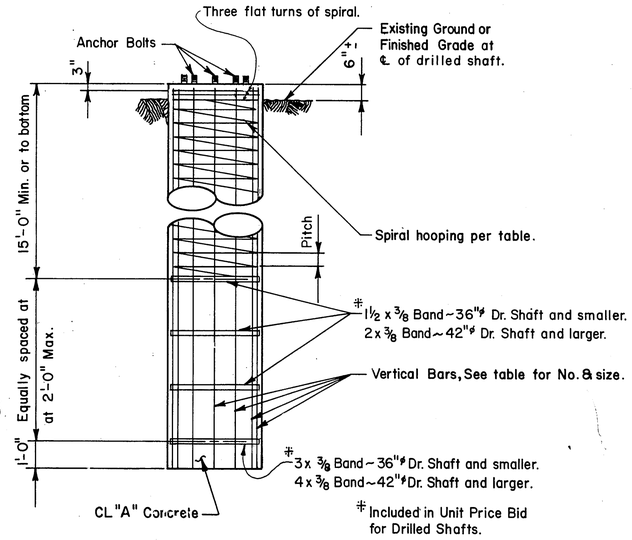
ANCHOR BOLT ASSEMBLY
(PRIOR TO INSTALLATION)



BEARING SEAT ELEVATION



FOUNDATION DETAIL

GENERAL NOTES:

Concrete shall be Class "A".
Reinforcing shall conform to item 440.
Anchor bolts shall conform to ASTM A193-B7. Nuts for anchor bolts shall be heavy hex and shall conform to ASTM A194-2H. Thread for anchor bolts and nuts shall be 8 UN. Unless noted otherwise, anchor bolt top end projection plus 6" shall be galvanized. Nuts and washers at the base plate shall be galvanized. Nuts shall be tapped or chased after galvanizing. Bolts and nuts shall have Class 2A and 2B fit tolerances.
Anchor bolts shall be rigidly held in position during concrete placement using steel templates at the top and bottom. The top templates shall be removed after the concrete has set.
After the structure has been aligned in its final position, tack weld anchor bolt nuts to washer, and tack weld washers to base plate. Galvanizing in welded area shall be reparied in accordance with the Specification.
Unless shown otherwise welded steel bands may be replaced with spiral as noted on the foundation detail.
All vertical reinforcing shall be carried to the bottom of the Dr. Shaft.

FUSED CONNECTOR ASSEMBLY

ELECTRICAL NOTES AND SPECIFICATIONS

GENERAL NOTES

ALL WORK, MATERIALS, AND SERVICES NOT SHOWN ON THE PLANS, WHICH MAY BE NECESSARY FOR COMPLETE AND PROPER CONSTRUCTION, SHALL BE PERFORMED, FURNISHED, AND INSTALLED BY THE CONTRACTOR. THE LOCATION OF CONDUCTOR, CONDUIT, OTHER ELECTRICAL EQUIPMENT, AND SERVICE POLE IS DIAGRAMMATIC ONLY AND MAY BE SHIFTED BY THE ENGINEER TO ACCOMMODATE LOCAL CONDITIONS. ALL SPECIFICATIONS AND PROVISIONS NOT COVERED HEREIN SHALL BE IN ACCORDANCE WITH THE STANDARD SPECIFICATION ITEMS AND ANY SPECIAL PROVISIONS THERETO. CONDUIT AND EQUIPMENT SHALL BE SECURELY ATTACHED TO THEIR SUPPORTS.

CONDUCTORS

ALL CONDUCTORS SHALL COMPLY TO ITEM "ELECTRICAL CONDUCTOR" OF THE SPECIFICATIONS.

CONDUIT

ALL INSULATED CONDUCTORS ABOVE GROUND, EXCEPT CONDUCTORS IN PIPE TOWER LEGS, SHALL BE INSTALLED IN CONDUIT BETWEEN EQUIPMENT. CONDUIT SHALL BE PLACED ALONG AND ATTACHED TO THE POLE OR STRUCTURAL FRAME UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

CONDUIT ALONG THE MAST OR TOWER LEG SHALL BE RIGID METAL. CONDUIT FROM THE MAST OR TOWER LEG TO AND BETWEEN FIXTURES, AND CONDUIT BETWEEN FIXTURES SHALL PREFERABLY BE RIGID METAL, POLYVINYL CHLORIDE (PVC) OR ELECTRICAL METALLIC TUBING (EMT). HOWEVER, AT PLACES WHERE RIGID METAL, PVC OR EMT IS NOT FEASIBLE, CONDUIT MAY, WITH THE APPROVAL OF THE ENGINEER, BE LIQUID-TIGHT FLEXIBLE CONDUIT. CONDUIT BURIED IN TRENCH OR CONCRETE SHALL BE EITHER RIGID METAL, PVC OR HIGH DENSITY POLETHYLENE (HDP) AS INDICATED ON THE PLANS OR AS DETERMINED BY THE ENGINEER FROM THE SOIL CHARACTERISTICS. ALL BURIED CONDUIT SHALL HAVE STANDARD BUSHINGS AT THE EXTREMITIES.

CIRCUIT PROTECTOR ASSEMBLY (NOT IN CONTRACT)

THE AMPERE RATING OF THE CIRCUIT BREAKER SHALL BE 1.25 TIMES THE CALCULATED CIRCUIT LOAD CURRENT. THE RATING OF THE ASSEMBLY SHALL BE CONSISTENT WITH THE LOAD SERVED AND SHALL BE AS INDICATED ON THE PLANS OR AS DIRECTED BY THE ENGINEER. THE CIRCUIT BREAKERS SHALL BE DOUBLE POLE, THERMAL-MAGNETIC, FRONT MOUNTED, RATED AT THE SUPPLIED VOLTAGE. THE BREAKER OPERATING HANDLE SHALL BE TRIP FREE SO CONTACT CANNOT BE HELD AGAINST SHORT CIRCUIT OR ABNORMAL OVERLOAD. THE SHORT CIRCUIT INTERRUPTING CAPACITY SHALL BE 15,000 AMPERES SYMMETRICAL.

SERVICE POLE (NOT IN CONTRACT)

THE POLE LENGTH SHALL BE 25 FEET UNLESS OTHERWISE NOTED ON THE PLANS. SERVICE POLE SHALL BE CREOSOTE-TREATED TO 8 POUNDS PER CUBIC FOOT RETENTION OR PENTACHLOROPHENOL TREATED TO 0.4 POUNDS PER CUBIC FOOT RETENTION IN ACCORDANCE WITH THE ITEM "TIMBER PRESERVATIVE AND TREATMENT". FOR A PROJECT REQUIRING 10 OR LESS POLES, THE CONTRACTOR MAY PURCHASE POLES LOCALLY IF SOURCE AND TREATMENT ARE DOCUMENTED.

PHOTOELECTRIC CONTROL (NOT IN CONTRACT)

THE PHOTOELECTRIC CONTROL SHALL BE OF THE SINGLE POLE, SINGLE THROW TYPE, DOUBLE BREAK, RATED AT THE SUPPLIED VOLTAGE. CONTROLLER SHALL HAVE FOOTCANDLE ADJUSTMENT, MAGNETICALLY OPERATED RELAY, OPAQUE COVER, AND SHALL BE THE DIRECT ORIENTATION TYPE. THE MOUNTING BRACKET AND CONTROL SHALL BE MOUNTED ON THE SERVICE POLE. THE CONTROL SHALL BE ORIENTED NORTH OR AS SPECIFIED BY THE MANUFACTURER. THE PHOTOELECTRIC CONTROL CIRCUIT SHALL HAVE A THREE POSITION HAND-OFF-AUTOMATIC SELECTOR SWITCH AT A CONVENIENT LOCATION.

MAGNETIC CONTACTOR (NOT IN CONTRACT)

THE MAGNETIC CONTACTOR SHALL BE OF THE TWO POLE TYPE WITH A MINIMUM CONTACT RATING OF 480 VOLTS AND A MINIMUM CONTACT RATING OF 30 AMPS.

GROUNDING

ALL SERVICE POLES AND SIGN STRUCTURE TOWERS SHALL BE GROUNDED IN ACCORDANCE WITH THE NATIONAL ELECTRICAL CODE AND DETAILS SHOWN ON THE PLANS. GROUND RODS SHALL BE 5/8" DIAMETER COPPER CLAD STEEL. WHERE DRILLED HOLES ARE REQUIRED, THE RODS SHALL BE 8 FEET LONG AND THE BACKFILL MATERIAL SHALL HAVE AN ADMIXTURE OF COMMON SALT. DRIVEN GROUND RODS SHALL BE 10 FEET LONG.

ENCLOSURES (NOT IN CONTRACT)

ALL ENCLOSURES HOUSING ELECTRICAL EQUIPMENT SHALL BE GALVANIZED, RAINTIGHT, AND DESIGNED FOR OUT-DOOR INSTALLATION IN ACCORDANCE WITH THE NATIONAL ELECTRICAL MANUFACTURES ASSOCIATION SPECIFICATIONS. THE MAGNETIC CONTACTOR AND CIRCUIT PROTECTOR SHOWN ON THE SERVICE POLE MAY, AT THE CONTRACTOR'S OPTION, BE GROUPED IN ONE ENCLOSURE, OR MAY BE HOUSED IN SEPARATE ENCLOSURES. EACH ENCLOSURE SHALL BE PROVIDED WITH A LOCK AND THE CONTRACTOR SHALL PROVIDE THE ENGINEER WITH THREE COPIES OF A MASTER KEY.

PAYMENT

ALL ITEMS NECESSARY TO ACCOMPLISH THE ILLUMINATION OF THE SIGNS SHALL BE MEASURED AND PAID FOR AS STATED IN THE SPECIFICATIONS.

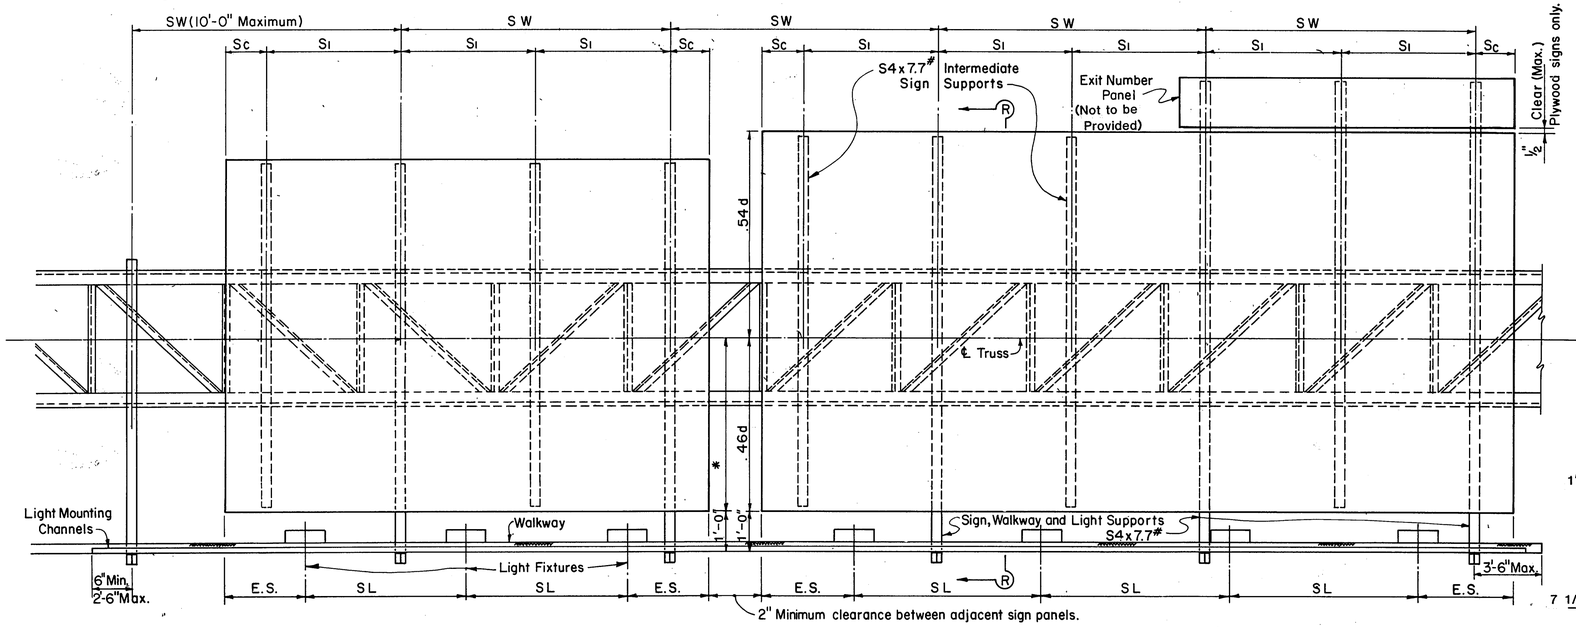
PART PLAN

(Showing Truss, Signs, Walkways and Lights)



PART ELEVATION

* Where signs of different depths are used, the bottom edges of all signs may be placed in line. Where this is done, all signs should be so positioned that the bottom edges are approximately 0.46 of the depth of the deepest sign below the ℄ of the truss. When signs are spaced thusly, SI is determined by the deepest sign.

See Overhead Sign Bridge Detail Sheets for Spacing SL & E.S.
See Standard Drawing No. SS-19 for Aluminum Sign Details & Max. Spa. for SI.
Sc = 6" Minimum, .25 SI Maximum.

GENERAL NOTES:

Design conforms to the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals.

Materials, Fabrication, Construction and Erection shall conform with the requirements of specifications for Interstate Signing and Delineation Projects and Texas Department of Highways and Public Transportation Standard Specifications for Construction of Highways, Streets and Bridges. Structural Steel shall conform with A.S.T.M. Specification A36 unless noted otherwise.

Bolts shall have Hexagon Heads and Nuts and conform with A.S.T.M. Specification A307.

All parts shall be galvanized after fabrication

Sign Walkways shall not be provided for this Project.

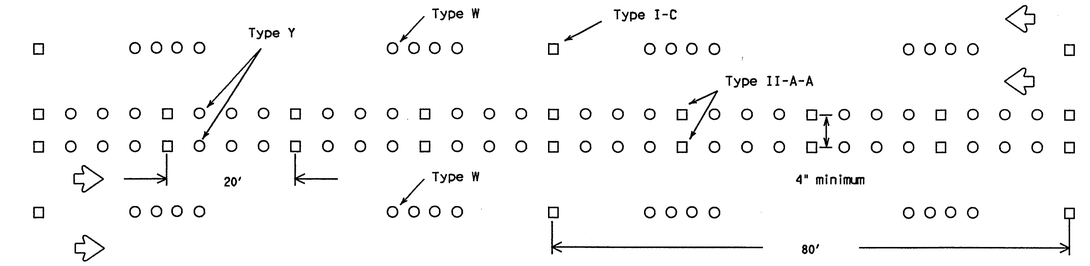
EDGE LINES AND LANE LINES FOR DIVIDED HIGHWAYS

Raised pavement markers Type II-C-R, clear face toward normal traffic and red face toward wrong-way traffic, shall be spaced on 80-foot centers.

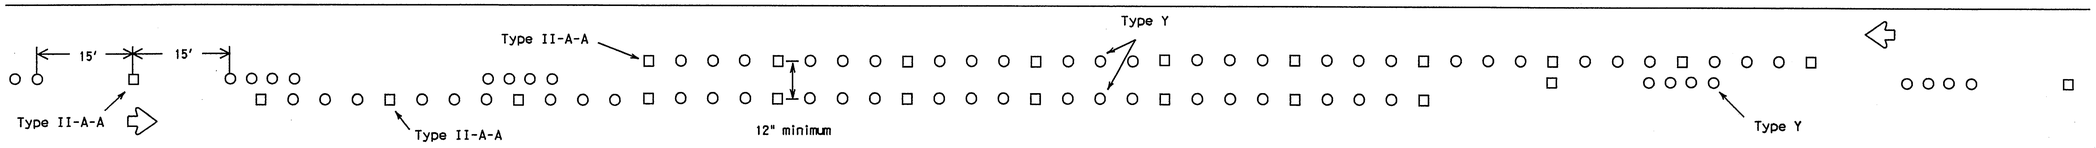
As required by the Engineer or shown elsewhere in the plans, Type II-C-R markers shall be placed on 40-foot centers for the below listed conditions:

1. Vertical curves with grades over 2 percent and less than 1000 feet long,
2. horizontal curves,
3. or continously illuminated sections.

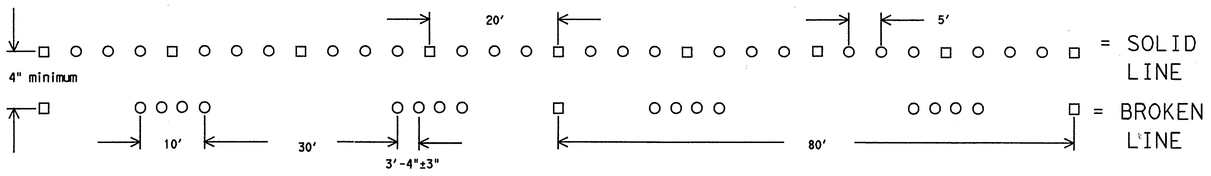


LANE LINES & CENTERLINES FOR MULTI-LANE UNDIVIDED HIGHWAYS

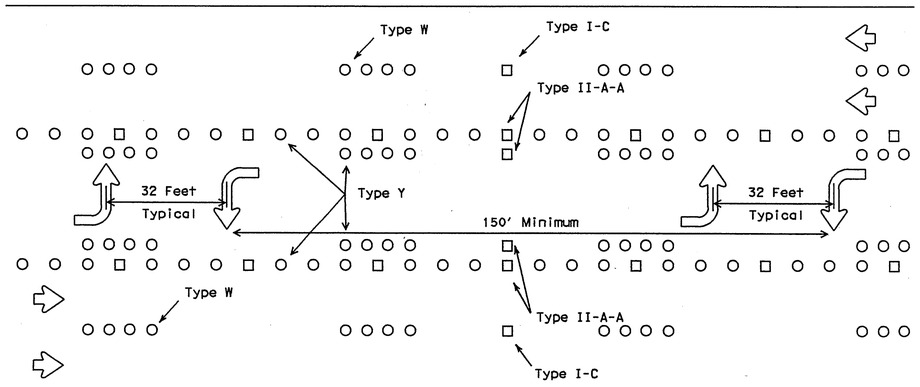
Raised pavement marker Type I-C, clear face toward normal traffic, shall be placed on 80-foot centers.



CENTERLINE & NO-PASSING ZONE BARRIER LINES FOR TWO LANE TWO-WAY HIGHWAYS



PATTERN DETAIL



TWO-WAY LEFT TURN LANE

LEGEND:

- ○ TRAFFIC BUTTON (NONREFLECTORIZED)
- □ RAISED PAVEMENT MARKER (REFLECTORIZED)

GENERAL NOTES:

All raised pavement markers placed in broken lines shall be placed in line with and midway between the stripes.

First and last raised pavement marker in a no-passing line shall be a reflective marker.

On concrete pavements, the raised pavement markers should be placed to one side of the longitudinal joints.

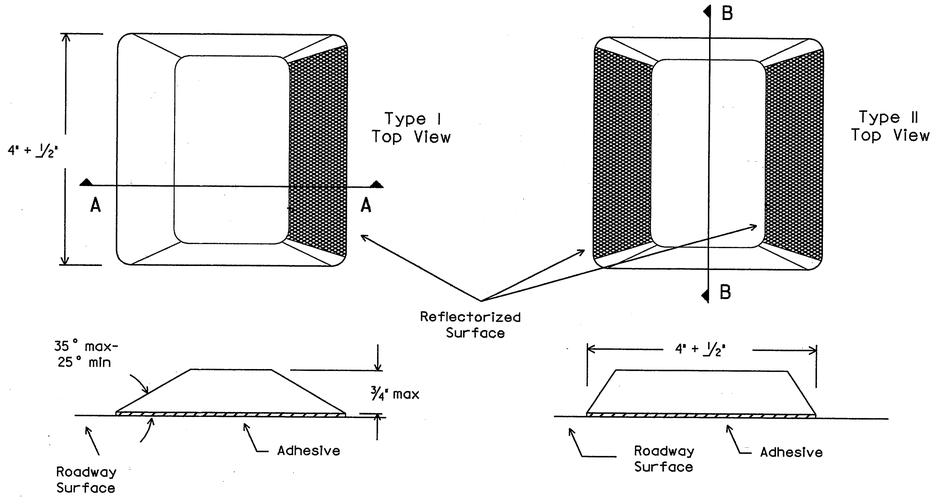
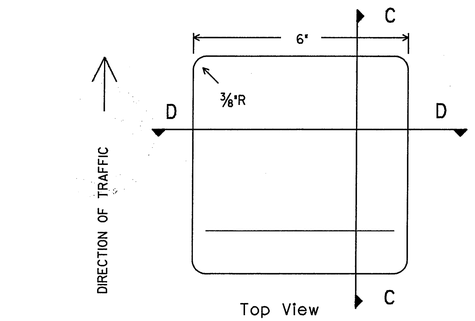
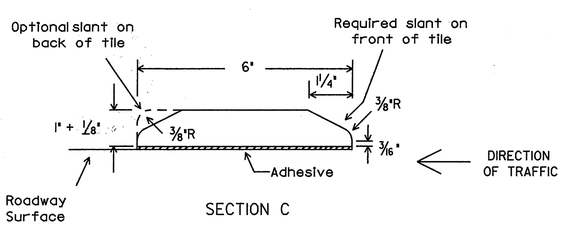
TRAFFIC BUTTONS
(NON-REFLECTORIZED)

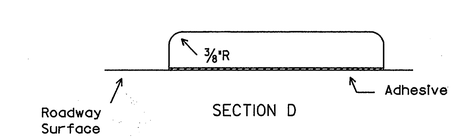
NOTE: Minimum area of markers shall be not less than 12.5 square inches.
Either shape may be used but the same shape shall be used through out the project.



RAISED PAVEMENT MARKERS
(REFLECTORIZED)

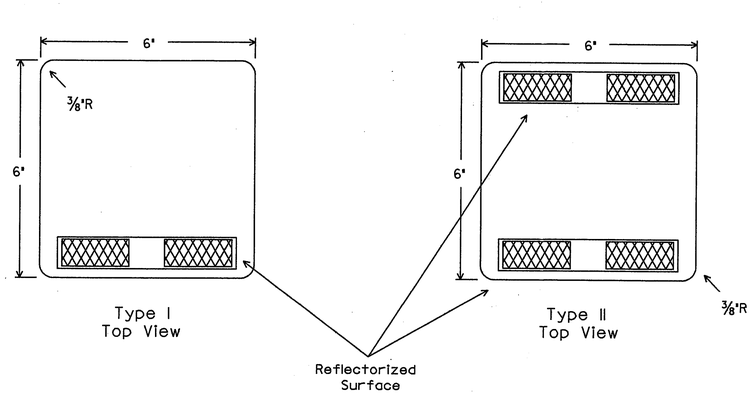


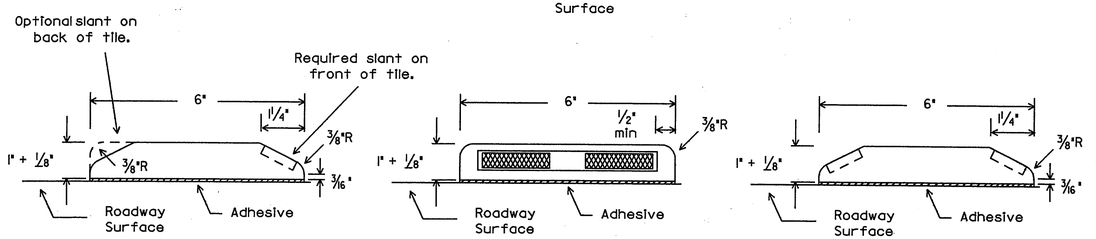




JIGGLE BAR TILES
(NON-REFLECTORIZED)

"Jiggle Bars" consist of a number of Jiggle Bar Tiles placed in a linear configuration.





JIGGLE BAR TILES
(REFLECTORIZED)

SPECIFICATION REFERENCE TABLE
MATERIALS AND TEST SPECIFICATIONS (D-9)

JIGGLE BAR TILE	D-9-4100
PAVEMENT MARKERS (REFLECTORIZED)	D-9-4200
TRAFFIC BUTTONS	D-9-4300
BITUMINOUS ADHESIVE	D-9-6130

GENERAL NOTES:

RAISED PAVEMENT MARKERS (RPMs) MAY CONSIST OF TRAFFIC BUTTONS, PAVEMENT MARKERS AND/OR JIGGLE BAR TILES. PAVEMENT SURFACE SHALL BE PREPARED AND CLEANED SUBJECT TO APPROVAL OF THE ENGINEER BEFORE ADHESIVE AND RPMs ARE PLACED.

JIGGLE BARS SHALL BE ORIENTED PERPENDICULAR TO ROADWAY. JIGGLE BARS SHALL ALSO BE PLACED AT SUCH OTHER LOCATIONS AS SHOWN IN PLANS OR AS DIRECTED BY THE ENGINEER.

MARKERS, BUTTONS AND JIGGLE BAR TILES SHOWN ARE FOR ILLUSTRATION PURPOSES ONLY AND NOT INTENDED TO SPECIFY ANY PARTICULAR PRODUCT. ALL PAVEMENT MARKERS PROVIDED SHALL BE OF THE SAME MANUFACTURER.

ALL DIMENSIONS ARE + 1/8" UNLESS OTHERWISE NOTED.

ALUMINUM SIGN BLANKS	D-9-7110 △
REFLECTIVE SHEETING, TYPE C (HIGH SPECIFIC INTENSITY)	D-9-8300
VINYL NON-REFLECTIVE DECAL SHEETING	D-9-8320

GENERAL NOTES:

The alphabets and lateral spacing between letters and numerals shall conform with the Texas 'Manual on Uniform Traffic Control Devices for Streets and Highways', latest edition, and any approved changes thereto. Lateral spacing of text shall provide a balanced appearance. All materials shall conform to Department Specifications.

Legend (except where noted), shall be black and applied by screening process, cut-out vinyl non-reflective decal sheeting or combination thereof. Background shall be yellow reflective sheeting (Type C).

Sign blanks shall be one piece 0.080 inch thick sheet aluminum alloy (Type A), unless otherwise noted elsewhere in the plans. △

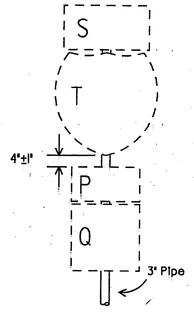
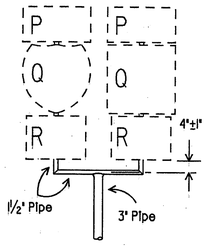
Type A

THIS TYPE PIPE MOUNT OR YELLOW FIBERGLASS REINFORCED PLASTIC (FRP) SUPPORT MAY BE USED FOR ANY SIGN OR COMBINATION OF SIGNS WITH THE SIGN AREAS INDICATED BELOW, EXCEPT FR6-1 AND W1-6 SIGNS (SEE TYPE D-1):
MAX. OF 10 SQ. FT. FOR 2" PIPE MOUNT
MAX. OF 16 SQ. FT. FOR 3" FRP MOUNT
THE AREA OF THE REGULATORY OR WARNING SIGN SUPPLEMENTARY PLAQUES SHALL NOT BE USED IN DETERMINING THE ABOVE SIGN AREA.



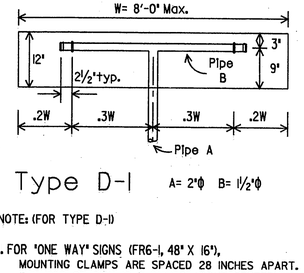
Type A-1

THIS TYPE PIPE MOUNT TO BE USED FOR A 36" OR 45" INTERSTATE ROUTE MARKER WITH A 24" OR 30" ROUTE MARKER ON MAIN LANES OR AS A SPECIFIED OPTIONAL SUBSTITUTE FOR TYPE B.



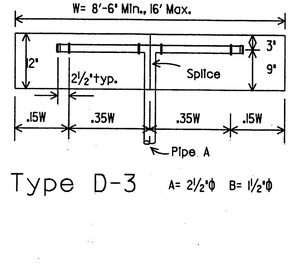
Type B

THIS TYPE PIPE MOUNT TO BE USED WITH 2 ROUTE MARKER ASSEMBLIES.



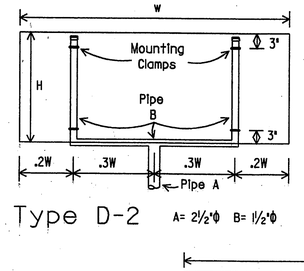
Type D-1

A= 2"ϕ B= 1½"ϕ



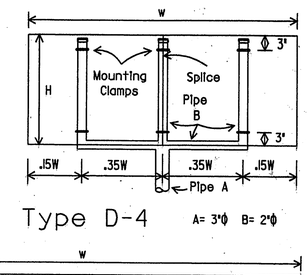
Type D-3

A= 2½"ϕ B= 1½"ϕ



Type D-2

A= 2½"ϕ B= 1½"ϕ



Type D-4

A= 3"ϕ B= 2"ϕ

NOTE: (FOR TYPE D-1)

1. FOR "ONE WAY" SIGNS (FR6-1, 48" X 16"), MOUNTING CLAMPS ARE SPACED 28 INCHES APART. THE TOP OF SIGN IS 8 INCHES ABOVE CENTERLINE OF PIPE B.
2. FOR "LARGE ARROW" SIGN (W1-6 , 48" X 24"), MOUNTING CLAMPS ARE SPACED 30 INCHES APART.

MOUNT TYPE	H	W Min	W Max
D-2	24"	n/a	8'
	30"	n/a	6'6"
	36"	n/a	5'6"
D-4	24"	8'6"	12'6"

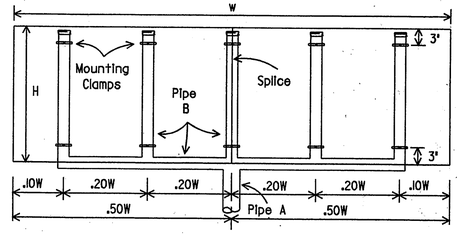
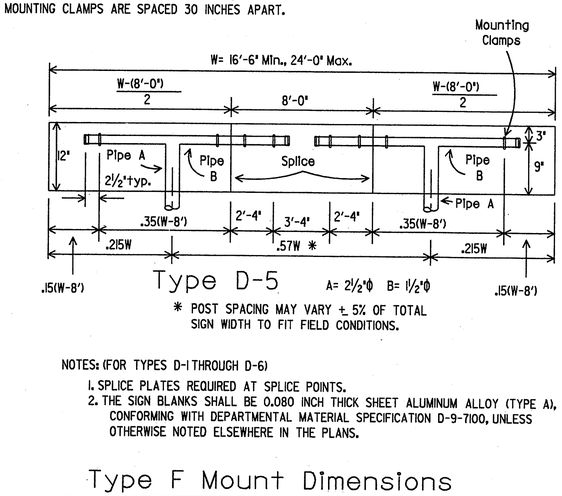
	36"	6'0"	8'0"
D-6	24"	13'0"	13'6"
	30"	10'0"	11'0"
	36"	8'6"	9'0"



Type D-6

A= 3"ϕ B= 2"ϕ



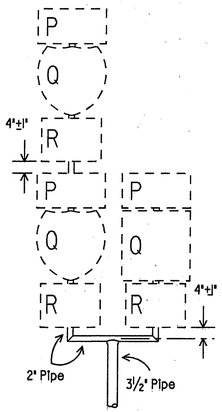
Type D-5

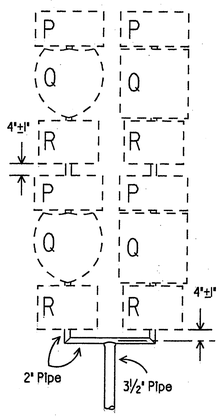
A= 2½"ϕ B= 1½"ϕ

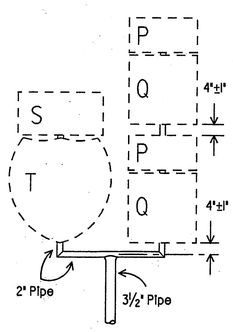
* POST SPACING MAY VARY ± 5% OF TOTAL SIGN WIDTH TO FIT FIELD CONDITIONS.

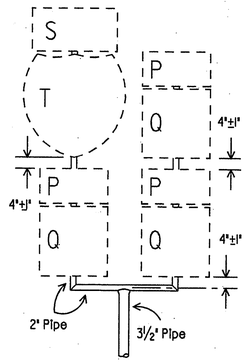
NOTES: (FOR TYPES D-1 THROUGH D-6)

1. SPLICE PLATES REQUIRED AT SPLICE POINTS.
2. THE SIGN BLANKS SHALL BE 0.080 INCH THICK SHEET ALUMINUM ALLOY (TYPE A), CONFORMING WITH DEPARTMENTAL MATERIAL SPECIFICATION D-9-7100, UNLESS OTHERWISE NOTED ELSEWHERE IN THE PLANS. △





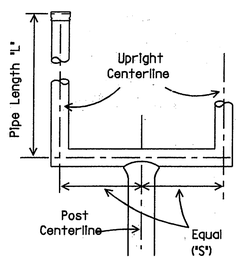




Type C

THIS TYPE PIPE MOUNT TO BE USED:

1. WHEN 3 OR 4 ROUTE MARKERS ARE REQUIRED; OR
2. FOR A 36 INCH OR 45 INCH INTERSTATE ROUTE MARKER WITH 2 OR 3 24 INCH AND/OR 30 INCH ROUTE MARKERS.



See table at right for values of "L"

P = 24"x12" Cardinal Direction Marker
Q_1 = 24"x24" Interstate, US or State Route Marker
Q_2 = 30"x24" Interstate or US Route Marker
R = 21"x15" Direction Arrow
S = 30"x15" Cardinal Direction Marker
T_1 = 36"x36" (2) digit Interstate Route Marker
T_2 = 45"x36" (3) digit Interstate Route Marker

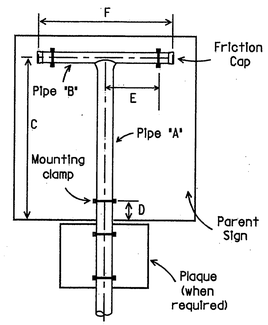
Marker Combinations	"L"
2P+2Q+2R+7"	9'-1"
P+2Q+2R+7"	8'-1"
2Q+2P+7"	6'-7"
Q+R+3"	3'-6"
S+T+3"	4'-6"
P+Q+R+3"	4'-6"
P+Q+S+T+7"	7'-10"

DIMENSION "S"

DIMENSION "S" EQUALS THE DISTANCE FROM THE CENTERLINE OF UPRIGHT TO THE CENTERLINE OF CLEARANCE BETWEEN SIGN GROUP.

"S" = 1'-4 1/2 " for Q_1
"S" = 1'-7 1/2 " for Q_2

"S" = 1'-10 1/2 " for T_1
"S" = 2'-3" for T_2



Type F Mount

GENERAL NOTES FOR SIGN SUPPORT TYPES A, B, C, D AND F

1. TYPE A SUPPORT SHALL BE PIPE OR YELLOW FRP. FRP MOUNTS SHALL MEET DEPARTMENT SPECIFICATION D-9-4410.
2. PIPE COLLAR COUPLING SHALL BE USED FOR ALL SIGNS SUPPORTED ON 2" AND 2 1/2" PIPE POSTS.
3. TRIANGULAR SLIP BASE SHALL BE USED FOR SIGNS SUPPORTED ON 3" AND 3 1/2" PIPE POSTS.
4. MOUNTING CLAMP, VERTICAL CLEARANCE AND LATERAL CLEARANCE DETAILS ARE SHOWN ON STANDARD SMD(I-2) (MOD.). △
5. WELDED PIPE MOUNT, FRICTION CAP, PIPE COLLAR COUPLING, TRIANGULAR SLIP BASE AND FOUNDATION DETAILS ARE SHOWN ON STANDARD SMD(I-3) AND SMD(I-4) (MOD.). △

Type F Mount Dimensions

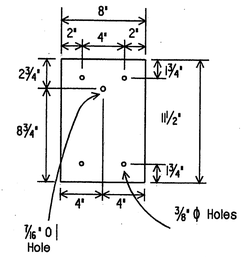
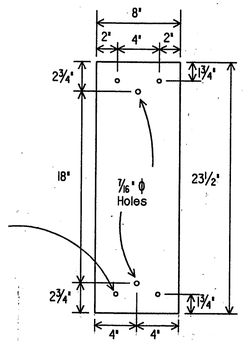
	SS2-1	3"ϕ	2"ϕ	30"	6"	12"	30"	3





Splice Plates

SPLICE PLATES SHALL BE 1/8" STEEL PLATE (ASTM A36) OR 1/8" ALUMINUM PLATE (ASTM B209 ALLOY 6061-T6 OR 5052-H38). STEEL SHALL BE GALVANIZED IN ACCORDANCE WITH ASTM A123.

△1 INCLUDES PARENT SIGNS OF THIS SIZE WHICH HAVE SUPPLEMENTARY PLAQUE. EXAMPLE: WHEN "DO NOT ENTER" SIGN (SR5-1, 48" X 48") IS MOUNTED IN COMBINATION WITH THE "RAMP" PLAQUE (R5-1T, 48" X 18"), THE "DO NOT ENTER" IS MOUNTED AS A 48" X 48" REGULATORY SIGN AND THE "RAMP" IS MOUNTED AS A PLAQUE.

△2 SPEED LIMIT SIGNS FR2-2, FR2-3 AND FR2-4 ARE MOUNTED ONLY IN COMBINATION WITH "SPEED LIMIT" FR2-1ON TYPE G MOUNT. "TRUCK SPEED LIMIT" SIGN (FR2-2A, 48" X 72") IS TO BE MOUNTED INDEPENDENTLY ON TYPE G MOUNT, SEE STANDARD SMD (TY G) FOR DETAILS. WHEN "WRONG WAY" SIGN (SR5-1A, 48" X 36") IS MOUNTED IN COMBINATION WITH "DO NOT ENTER" SIGN (SR5-1, 48" X 48"), TYPE G MOUNT IS USED.

△3 SCHOOL ADVANCE (SSI-1, 48" X 48") AND SCHOOL CROSSING (SS2-1, 48" X 48") SYMBOL SIGNS SHALL BE MOUNTED ON A TYPE F MOUNT.

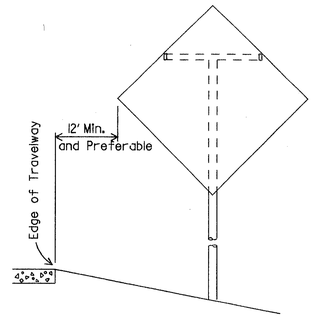
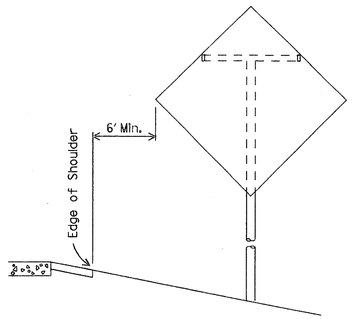
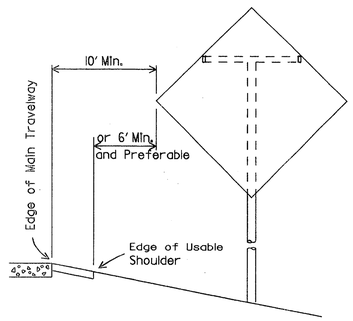
VERTICAL CLEARANCE OF SMALL SIGNS ALL TYPES OF ROADWAYS



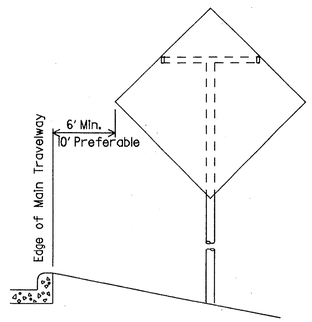
Rural Conventional Highway without shoulder.



Rural Conventional Highway with shoulder.

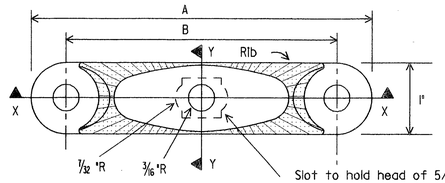


Expressways or Freeways without curb or with mountable curb.

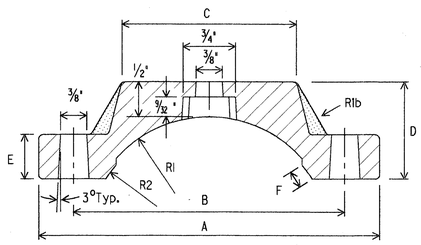


Expressways or Freeways with unmountable curb.

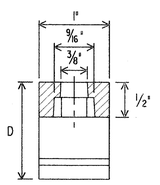
LATERAL CLEARANCE OF SMALL SIGNS TO THE RIGHT OR LEFT SIDE OF ROADWAY



Slot to hold head of 5/16" sq. head bolt. The bolt shall be 1" long for metal signs and 13/4" long for plywood signs, with full threads, a medium washer, and galv. steel or aluminum self-locking hex head nut. The bolt head must not turn in slot.



Section X-X



Section Y-Y

Pipe Clamp Casting

Pipe clamp casting shall be ASTM B26 or B108 aluminum alloy A444.0-T4 or 356.0-F.

All sign mounting clamp parts not made from aluminum shall be galvanized steel in conformance with ASTM A153 Class A or stainless steel.

Dimensions for Mounting Clamp

Standard Pipe Size	A	B	C	D	E	F	G	K	L	R1	R2

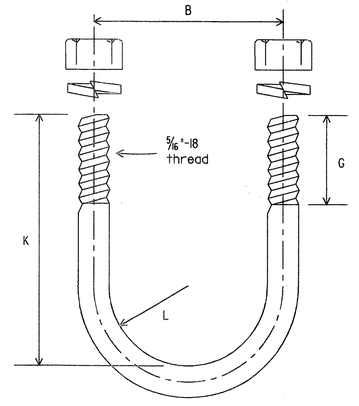
All dimensions shown are in inches.

MOUNTING CLAMP DETAILS

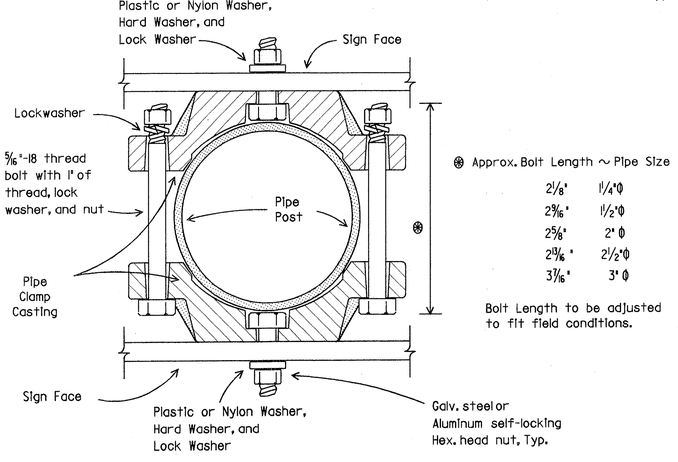


U-Bolt

U-Bolt to be made in accordance with standard manufacturing procedure. 9/32" dia. stock is permissible. American standard regular semi-finished hex. nuts and spring lockwashers.

GENERAL NOTES:

1. All clearances apply to both rural and urban locations, except as noted.
2. Where physical features of the roadway will permit, maximum lateral clearances are desirable. For frontage roads, ramps and other connecting roadways, lesser clearances may be used, but generally no less than six feet is recommended between the edge of the travelway and the edge of the sign. At intersections, signs should be positioned in the optimum location for viewing by traffic.
3. Where necessary, the minimum allowable clearance of two feet may be used in urban locations on conventional highways.
4. Where a sign is to be located behind guardrail, the allowable minimum clearance may be used, measured from the face of the guardrail to the near edge of the sign.
5. Lateral clearances of signs mounted on left side of roadway are the same as shown above where space will permit.



⊛ Approx. Bolt Length ~ Pipe Size

2 1/8"	1 1/4" ϕ
2 3/16"	1 1/2" ϕ
2 5/8"	2" ϕ
2 13/16"	2 1/2" ϕ
3 1/16"	3" ϕ

Bolt Length to be adjusted to fit field conditions.

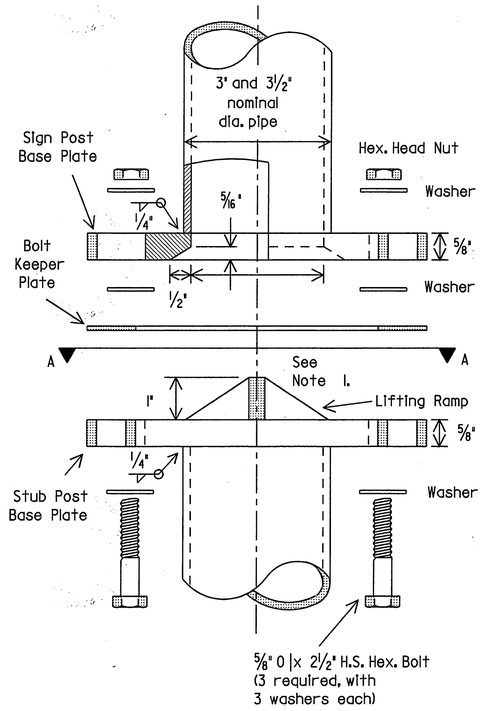
TRIANGULAR SLIP BASE DETAILS



SIGN POST & STUB POST ELEVATION

TRIANGULAR SLIP BASE NOTES:

1. The lifting device may consist of welded ramps or a conical shape formed into the center of the Stub Post Base Plate.
2. The Sign Post Base Plate of the Triangular Slip Base shall have the same exterior dimensions as the bottom plate. The lifting device shall be a part of the Stub Post Base Plate only. A hole equal to the inside diameter of the Sign Post shall be cut through the center of the Sign Post Base Plate with the hole edge beveled as detailed.
3. The Base Plates and lifting device shall conform with the requirements of ASTM A36 or A572 Grade 50.
4. All structural steel shall be galvanized in accordance with ASTM A123. The entire support shall be galvanized from the top down to a minimum depth of 6 inches into the foundation. All nuts, bolts and washers shall be galvanized in accordance with ASTM Designation: B695 Class 50 or A153 Class C or D.
5. All high strength bolts shall conform to ASTM A325 (ASTM A449 may be substituted for ASTM A325 provided proper bolt head, nut and/or washer clearances are maintained). All high strength nuts shall be of such capacity as to develop the bolt strength.

BOLTING PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

(1) Assemble Sign Post, Bolt Keeper Plate and Stub Post with bolts and three flat washers per bolt as shown.

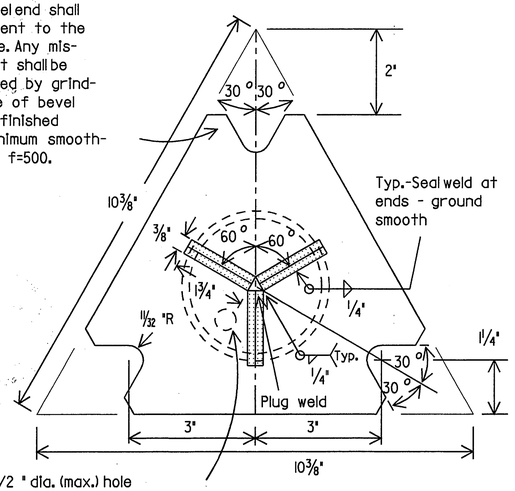
(2) Shim as required to plumb post.

(3) Tighten all bolts the maximum possible with a 12 to 15 inch wrench to clean bolt threads and to bed washers and shims.

(4) Loosen each bolt in sequence and retighten bolts in a systematic order to the prescribed torque of 440 to 450 inch pounds or 36 to 38 foot pounds. DO NOT OVERTIGHTEN.

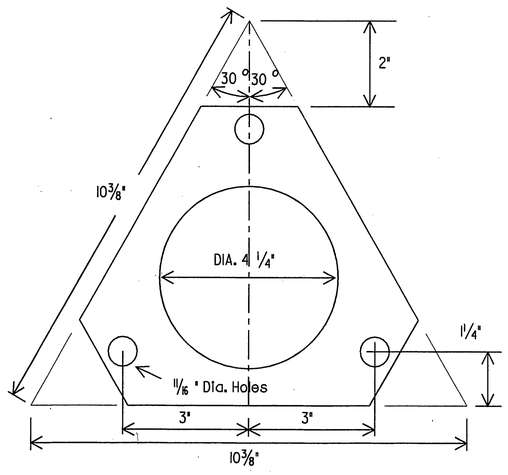
(5) To prevent nut loosening, burr threads of bolt at junction with nut using a center punch.

The bevel end shall be tangent to the bolt hole. Any misalignment shall be corrected by grinding. Face of bevel shall be finished to a minimum smoothness of f=500.



Provide 1/2" dia. (max.) hole in the Stub Post Base Plate within the inside radius of the stub post for galvanized drainage.

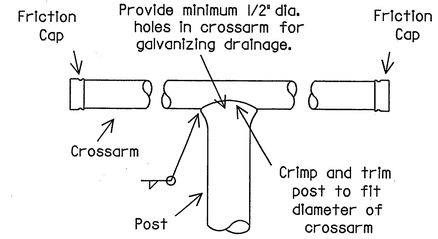
VIEW A-A



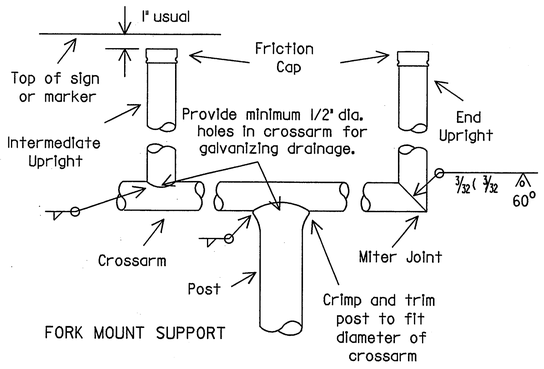
BOLT KEEPER PLATE

Bolt Keeper Plate shall be 30 gauge galvanized steel.

WELDED PIPE MOUNT DETAILS



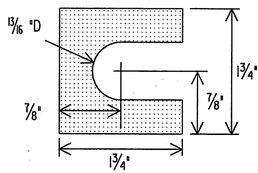
TEE MOUNT SUPPORT



FORK MOUNT SUPPORT

The contractor at his option may furnish standard weight pipe conforming to ASTM Specification A53 Grade B, A501 or any other standard weight steel pipe. Pipe may be of either electric resistance welded or seamless type, with a minimum yield strength of 35,000 PSI and a minimum elongation of 15 percent in 2 inches. Pipe shall have outside diameters and wall thicknesses which are equivalent to or better than those specified hereon.

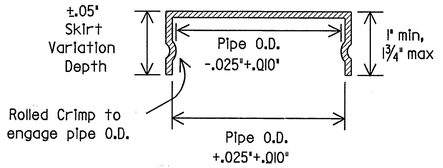
All pipes to be welded shall be of weldable quality.



SHIM

Furnish two .012"+ thick and two .032"+ thick shims per post. Shims shall be fabricated from brass shim stock or strip conforming to ASTM B36.

FRICTION CAP DETAIL



Friction caps may be manufactured from hot rolled or cold rolled steel sheets. The minimum sheet metal thickness shall be 24 guage for all cap sizes.

The rim edges shall be reasonably straight and smooth. Caps shall be sized and formed in such a manner as to produce a drive-on friction fit and have no tendency to rock when seated on the pipe. The depth shall be sufficient to give positive protection against entrance of rainwater. They shall be free of sharp creases or indentations and show no evidence of metal fracture.

Caps shall have an electrodeposited coating of zinc in accordance with the requirements of ASTM B633 Class FE/ZN 8.

GENERAL NOTES:

Support and design shall conform with AASHTO Standard Specifications for structural supports of Highway signs, luminaires and traffic signals with a design wind speed of 60 mph.

Steel pipe shall be galvanized in accordance to ASTM Designation A123.

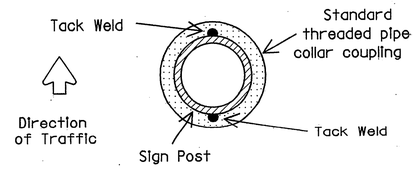
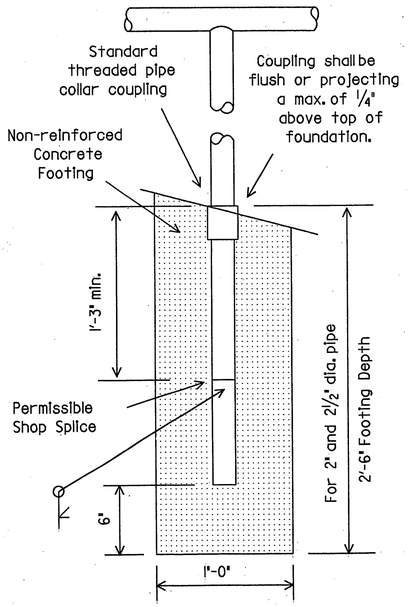
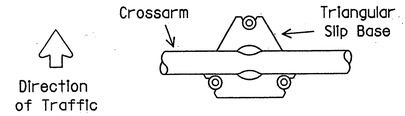
BREAKAWAY PIPE COLLAR COUPLING



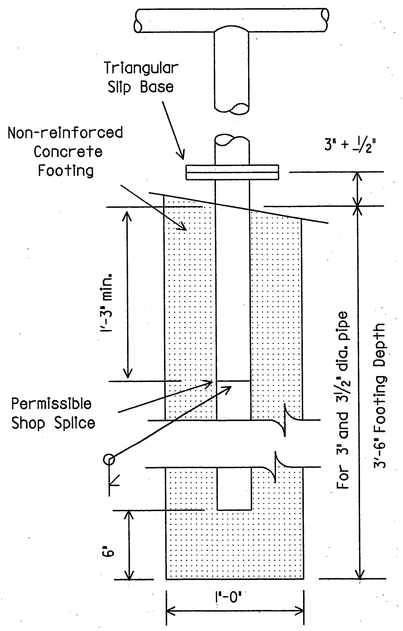


Pipe collar coupling shall be used for all signs supported on 2" and 2 1/2 " diameter pipe post.

TRIANGULAR SLIP BASE



Triangular slip base shall be used for 3" and larger pipe posts. The crossarm should be parallel to one side of the triangular slip base.



Triangular Slip Base shall be used for signs supported on 3" diameter and larger pipe posts.

GENERAL NOTES:

Support and design shall conform with AASHTO Standard Specifications for structural supports of highway signs, luminaires and traffic signals with a design wind speed of 60 mph.

Steel pipe shall be galvanized in accordance to ASTM Designation A123.

Where solid rock is encountered at ground level, the foundation shall be a minimum depth of 18 inches. When solid rock is encountered below ground level, the foundation shall extend into the solid rock a minimum depth of 18 inches or provide a minimum foundation depth of 30 inches. △

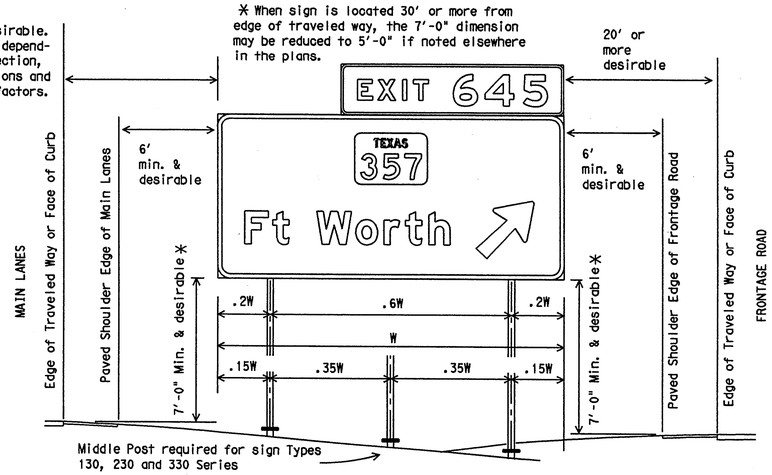
	Two Posts (220)			Three Posts (230)			
Sign Width (W)	4' thru 16'	17'	18'	19' thru 24'	25'	26'	27'	28'
Max. Wind Beam Spacing	4'-0"	3'-9"	3'-6"	4'-0"	3'-9"	3'-6"	3'-3"	3'-0"

ZONE 3 (Types 300)

	Two Posts (320)	Three Posts (330)
Sign Width (W)	4' thru 18'	19' thru 28'
Max. Wind Beam Spacing	4'-0"	4'-0"

30' or more desirable. May be reduced depending on cross section, viewing conditions and other related factors.

* When sign is located 30' or more from edge of traveled way, the 7'-0" dimension may be reduced to 5'-0" if noted elsewhere in the plans.



TYPICAL SIGN INSTALLATION AND LOCATION

LATERAL CLEARANCE NOTES:

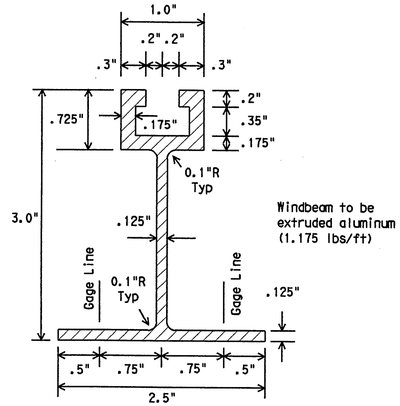
Lateral clearances of signs mounted on median side of main lanes are the same as shown above where space will permit.

Where a sign is to be located behind guardrail, an allowable minimum clearance of two feet may be used, measured from the face of the guardrail to the near edge of sign.

POST SPACING NOTES:

Post spacing on a two post sign may vary a maximum of plus or minus 10% of total sign width to fit field conditions.

Post spacing on a three post sign may vary a maximum of plus 5% of total sign width to fit field conditions.



WINDBEAM CROSS SECTION

SPECIFICATION REFERENCE TABLE
MATERIALS AND TESTS DIVISION SPECIFICATIONS
SIGN HARDWARE D-9-7120

GENERAL NOTES:

1. Design conforms with AASHTO Specifications for the design and construction of structural supports for highway signs.
2. Materials and fabrication shall conform to the requirements of the Department material specifications.
3. Structural steel shall conform to the Item, "METAL FOR STRUCTURES."
4. Parts shall be saw cut either before galvanizing and the galvanized cut cleaned of zinc build-up, or saw cut after galvanizing and the cut surface treated with zinc-based solder or zinc-rich paint in accordance with ASTM A780. (Cut surface will not be treated until plate is installed and all bolts fully tightened.)
5. Exit number panel shall be mounted to the right hand side of the parent sign for right exits and to the left for left hand exits. The number panel shall be mounted with two uprights so its right edge is even with the right edge of the parent sign or vice-versa for left hand exits.

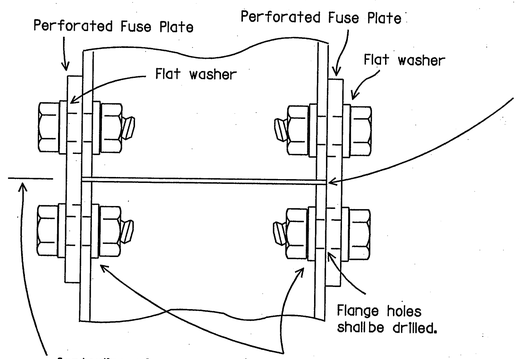
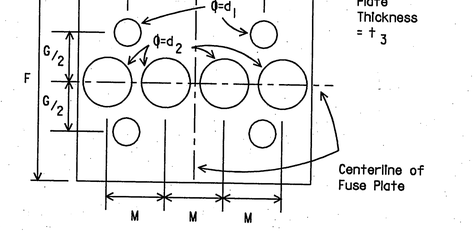
SECTION B-B

SIGN POST AND STUB POST
(For S4x7.7 and S3x5.7)



DETAIL "A"

Parts shall be saw cut either before galvanizing and the galvanized cut cleaned of zinc build-up, or saw cut after galvanizing and the cut surface treated with zinc-based solder or zinc-rich paint in accordance with ASTM A780. (Cut surface will not be treated until plate is installed and all bolts fully tightened.)



PERFORATED FUSE PLATE DETAIL

Use H.S. hex head bolts, hex head nut and bevel or flat washer (where req'd) under nut. All holes shall be drilled. All plate cuts shall preferably be saw cuts. However; flame cutting will be permitted provided all edges are ground. Metal projecting beyond the plane of the plate face will not be permitted. Steel fuse plates shall conform to the requirements of ASTM A36. ASTM A572 Grade 50 or ASTM A588 may be substituted for A36 at the option of the fabricator. Mill test reports shall be submitted for Fuse Plates. Steel used shall have an ultimate tensile strength not to exceed 80 KSI.

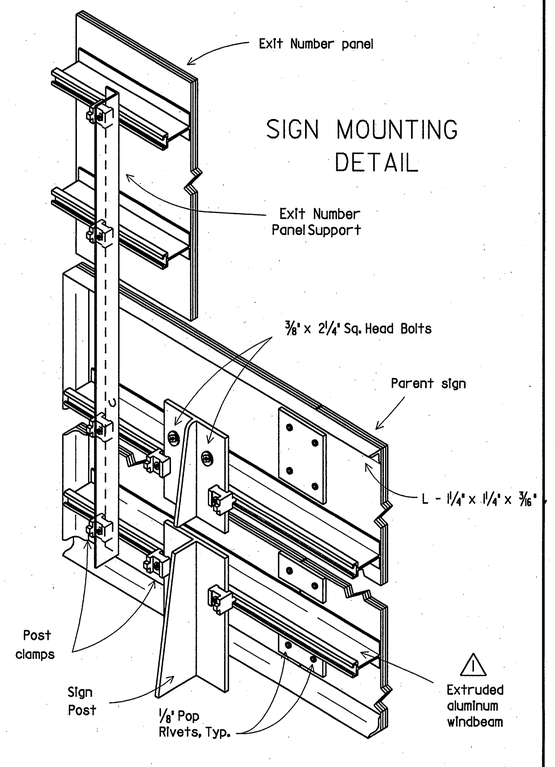
3" Windbeam

EXIT NUMBER PANEL SUPPORT



NOTES:

1. Exit number panel shall be mounted to the right hand side of the parent sign for right exits and to the left for left hand exits. The number panel shall be mounted with two uprights so its right edge is even with the right edge of the parent sign or vice-versa for left hand exits.
2. Exit number panel support shall be symmetrical about number panel centerline.
3. Exit number panel support shall be of ASTM A36 structural steel galvanized after fabrication, or ASTM B221 aluminum alloy 6061-T6.
4. All bolts, nuts, washers and pop rivets shall be galvanized per ASTM Designation: B695 Class 50, or A153 Class C or D.
5. When splice bars are required to fabricate the number panel, the splice bar detail as shown for the parent sign is to be used. Splice bars on number panel need not align with those on parent sign.
6. Posts, parent sign panels and exit number panels shall comply with notes on sheets SMD(2-1)(MOD.) and SMD(2-2).
7. Signs (such as exit number panels) attached above a parent sign shall be made of the same type material as the parent sign.
8. Exit number panel support and other connection hardware required to fasten exit number panel to parent sign shall be subsidiary to the sign blank.

NOTES:

1. A tolerance of plus or minus 1/4 inch will be permitted in the plan dimensions for fabrication of each single increment sign panel when necessary for squaring. A tolerance of plus or minus 1/4 inch will be permitted for each increment of a multi-increment sign panel where necessary to secure square, tight-fitting joints.

2. Splices shall be kept to a minimum. Panels 4'x8' or larger shall be used to the maximum extent possible in the fabrication of any sign. Signs or sign sections which cannot be fabricated from at least a 4'x8' panel shall be of one piece construction.

1 Extruded aluminum wind beams shall be continuous with no splices. (see sheet SMD(2-1)

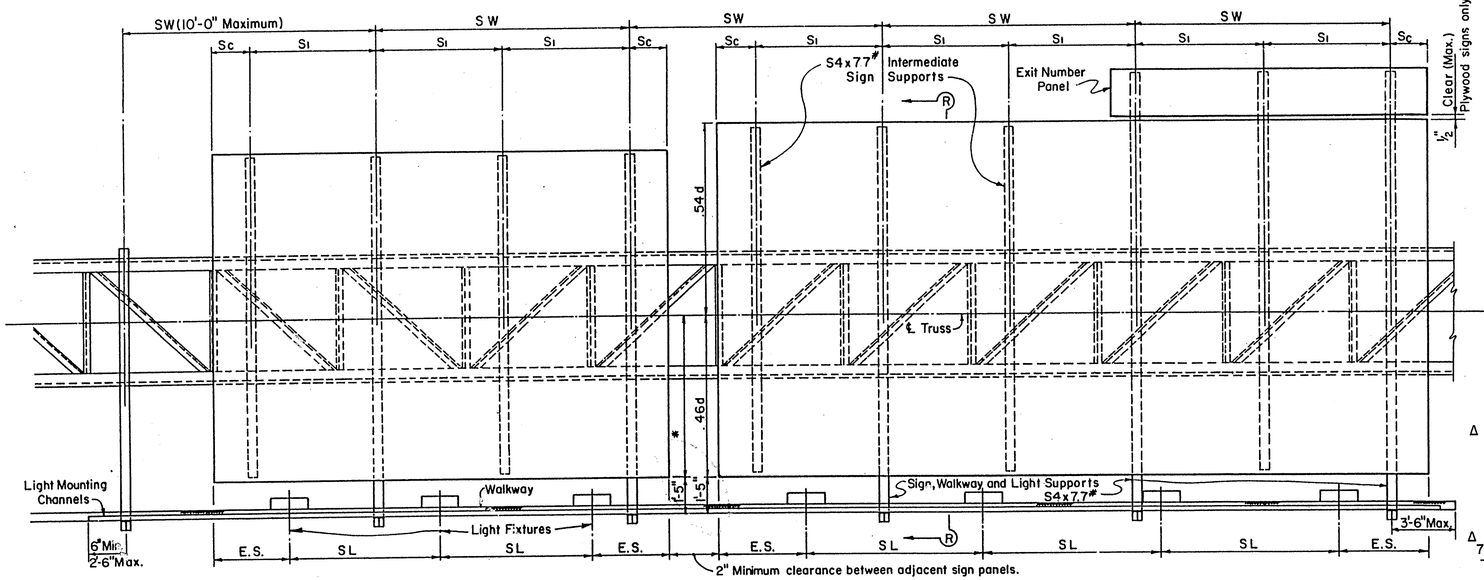
Sc = 6" Min. and .25 S1 Max.

PART PLAN

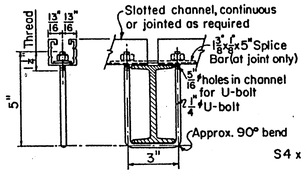
(Showing Truss, Signs, Walkways and Lights)



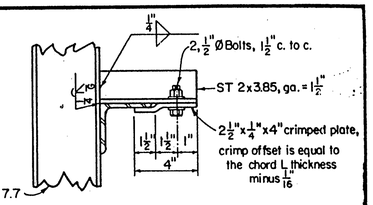
PART ELEVATION

* Where signs of different depths are used, the bottom edges of all signs may be placed in line. Where this is done, all signs should be so positioned that the bottom edges are approximately 0.46 of the depth of the deepest sign below the ℄ of the truss. When signs are spaced thusly, S1 is determined by the deepest sign.

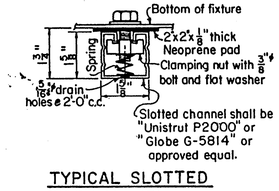
Δ See Sheet SMD(P-1)(MOD.) for Sign Details & Max. Spa. for S1. Sc = 6" Minimum, .25 S1 Maximum.



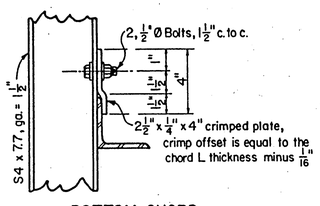
SECTION A-A



TOP CHORD



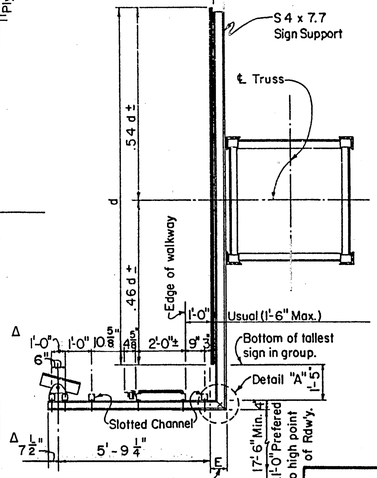
TYPICAL SLOTTED CHANNEL CONNECTED TO LIGHTING FIXTURE



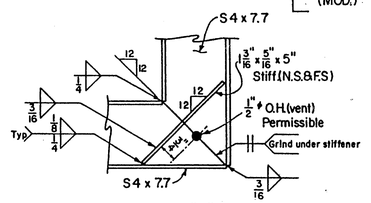
BOTTOM CHORD

SUPPORT TO TRUSS CONNECTION

NOTE: Exit Panel may be supported by sign support brackets as shown hereon, or may be supported as shown on sheet SMD(P-1)(MOD.) Regardless of method used spacing of supports shall not exceed S1.



SECTION R-R



DETAIL "A"

GENERAL NOTES:

Design conforms to the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals.

Materials, Fabrication, Construction and Erection shall conform with the requirements of specifications for Interstate Signing and Delineation Projects and Texas Department of Highways and Public Transportation Standard Specifications for Construction of Highways, Streets and Bridges. Structural Steel shall conform with A.S.T.M. Specification A36 unless noted otherwise.

Bolts shall have Hexagon Heads and Nuts and conform with A.S.T.M. Specification A307.

All parts shall be galvanized after fabrication

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

GENERAL NOTES

1. MINOR OPERATION is defined as those activities that will require traffic control devices to warn or direct traffic during daytime conditions. At the end of each work day, all traffic control devices should be removed from the view of motorists and no unusual conditions or potential hazards should exist that require advance warning.
2. MAJOR OPERATION is defined as those activities that may effect traffic during daytime and nighttime conditions. Work activities on high speed, high volume roadways may also be considered a major operation.
3. Additional details may be provided in the plans concerning sign size, type of channelization devices, sequence of work details, and required measures needed to control traffic during changes in the sequence of work.
4. All distance and spacing shown on the TCP Standards are approximate.
5. All traffic control devices used during nighttime shall be reflectorized, illuminated from within or externally illuminated.
6. Additional information for fabrication, erection and usage of the following traffic control devices is found in the "Texas Manual on Uniform Traffic Control Devices"(TMUTCD) and Barricade and Construction (BC) Standards:

BARRICADES	BC(2) and BC(3)
CONES	BC(3)
DELINEATION	WZ (BD)
DRUMS	BC(3)
PAVEMENT MARKINGS	BC(8) and BC(9) WZ (STPM) or TCP(7-1) if applicable
SIGNS	BC(4), BC(5), BC(6), BC(7)

SIGNS

1. Selection of sign size should be based on Table I.
2. Flashing warning lights, channelizing devices and/or flags may be required to call attention to the advance warning signs.
3. The words UTILITY, SIGNAL, BRIDGE, LIGHTING, SIGN, STREET or RAMP may be substituted for ROAD in all signs where applicable.
4. Advisory speed plaques, if used in conjunction with warning signs, speeds shall be determined in the field by the Engineer.
5. Regulatory signs shall be mounted at 5 foot minimum mounting height for rural areas and 7 foot minimum mounting height for urban areas.
6. Warning signs may be mounted on three types of supports at the minimum mounting heights as stated on BC(4):

Portable	(1 foot)
Temporary	(3 feet)
Fixed	(5 feet rural, 7 feet urban)

The illustrated sign spacing (X) and distance message (500 FT, 1000 FT, 1500 FT) are based on 55 mph 85th percentile speed with distance rounded to the nearest 500 feet. For slower speeds or minor operations, the word "AHEAD" may be used in lieu of the distance message.

CHANNELIZING DEVICES

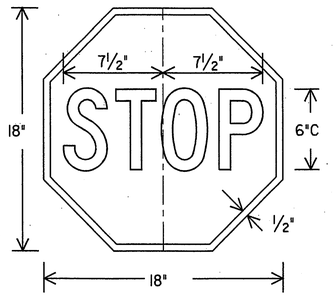
1. The maximum spacing between channelizing devices in a taper should be approximately equal in feet to the speed limit (S).
2. When channelizing devices are used to direct traffic across existing lane line or edge lines the spacing between channelizing devices shall be reduced by as much as 50%.
3. Channelizing device spacing should be reduced when placed on curves, hills or next to potential hazards. At least three channelizing devices should be in view at all times.
4. Lane closure taper length is equal to "L". Shifting taper length is equal to "1/2 L" Shoulder closure taper length is equal to "1/2 L".
5. Tapers downstream from the work area are optional and when used should be 50'-100' long.
6. Tapers shall be 50 feet minimum length when placed downstream of a flagger, YIELD sign or STOP sign.
7. The selection of channelizing devices should be based on degree of hazard associated with the work area. The selection priority of channelizing devices, in the order of increasing hazard recognition are:

   portable mounted delineators
   28" cones
   36" or more tubular cones
   portable mounted vertical panels
   36" cones
   Type I Barricade
   Type II Barricade
   plastic drums
   MBGF, fixed or barrel mounted
   concrete traffic barrier

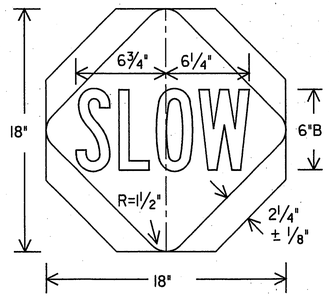
8. Flashing arrow panels used on two-way, two-lane roadways should flash in the caution mode.

FLAGGER CONTROL

1. Flagger shall wear orange safety vests. Flaggers should wear saftey hats to provide a professional image to the motorist and to protect the head from flying objects.
2. STOP/SLOW paddles shall be used as the primary method to control traffic by flaggers. The STOP/SLOW paddle minimum size is 18" x 18". Paddles may be attached to a 60 inch staff for easier handling. The larger size (24" x 24") should be attached to a 60 inch staff.
3. Flags are only used to control traffic for emergency situations and the STOP/SLOW paddles are not available.
4. Flaggers may carry hand held air horns to alert workers of an emergency condition.
5. For one lane two-way traffic control, one or more flaggers should be used where traffic density, road conditions or motorists' sight distance justify their use. If flaggers are used, the taper should be reduced to 50 feet minimum. When flaggers are used to control traffic, the FLAGGER symbol sign (FCW20-7a) shall be used. When flaggers are used, the BE PREPARED TO STOP sign (FCW21-8) should be used. Proper spacing between signs should be maintained.
6. When flaggers are used to draw attention to traffic control devices, the FLAGGER symbol sign should be used. Proper spacing should be maintained.
7. When more than one flagger is used, a chief flagger should be assigned the responsibility of making decisions concerning traffic control.



Background - Red
Legend & Border - White



Background - Orange
Legend & Border - Black

24" STOP-SLOW PADDLE

WORKER SAFETY

1. Workers exposed to traffic should wear orange safety vests.
2. Work vehicles within 30 feet of the traveled way should have strobe lights or rotating beacons in use.
3. When work vehicles are used to shadow the work area, the vehicle should be parked 30 feet or more from the work area, transmission in gear (or set in PARK), emergency brake set on, and front wheels turned away from work area.
4. Inactive work vehicles, including workers' private vehicles, should be parked away from the work area and as close to the right-of-way line as possible.

Table I

TYPICAL CONSTRUCTION WARNING SIGN SIZE AND SPACING [1,5,6]

Roadway Classification	Posted Speed	Sign Spacing ▲	Major Construction Or Major Maintenance Approach Warning Signs — CW 20n Series And CW 22-1 Sign		Minor Construction Or Minor Maintenance Approach Warning Signs — CW 21 Series		Other Warning Signs
	MPH	Ft. (Apprx.)	Standard Inches	Minimum [4] Inches	Standard Inches [7]	Minimum [4] Inches [7]	Standard Inches [7]
Conven.	30	80	48X48	36X36	30X30 or 36x36	24X24 or 30x30	30X30 or 36x36
	35	120					
	40	160					
	45	240		Use Standard Size		Use Standard Size	
	50	320					
	55	500 [2]					
Exp or Frwy	55	500 [3]			48X48 *	48X48 *	48X48 *
	65	750 [3]					

▲ Minimum distance from work area to First Advance Warning sign and/or distance between each additional sign.

* Smaller sign sizes may be used where sign designs have not been included in the "Standard Highway Sign Design for Texas" publication.

General Notes:

1. Special or larger size signs may be used as may be necessary.
2. Distance between signs should be increased as required to have 1500' advance warning.
3. Distance between signs should be increased as required to have 1/2 mile or more advance warning.
4. For use only on secondary roads or city streets where speeds are low.
5. Only diamond shaped warning signs are indicated.
6. See sign listing in TMUTCD, Appendix A for complete list of all available sign design sizes.
7. Where two sizes are listed, see sign listing in TMUTCD, Appendix A for proper size.

HB Zachry wishes to enter into an agreement with HDR Engineering to perform the following services:
Review the alternate designs of Teckwall at DS Type retaining walls. HDR Engineering has agreed to this arrangement for a price not to exceed $8,478.61.
Review of shop drawings for alternate design at DS Type retaining walls.
Geotechnical assistance associated with the alternate design of DS walls.
All parties agree that this is a "Value Engineering" change and will result in no cost to Texas Turnpike Authority. HDR will invoice Texas Turnpike Authority and the same shall be deducted from monies due HB Zachry. The net cost to Texas Turnpike Authority will be $0.00.
Total charges to H.B. Zachry will not exceed $8,478.61.

This supplemental agreement is necessary to reroute 20" discharge pipe from the tunnel sump to prevent the shut down of Longshots Sports Bar. The original location would have required additional easements that are not now available. Line must be lowered to a depth of 15' to clear utilities

46' added 20" bore @ 430.50/LF =	$19,803.00
80' additional depth (now located in rock) @ 72.45 =	$5,796.00
Additional depth for shoring for bore & receiving pits =	$7,350.00
All work necessary to connect line from bored pipe in receiving pit to junction box including & replacing sidewalk, asphalt pavement, curbs, all pipe, fittings etc. to complete the connection. Also includes protection of existing utilities. Contractor makes no guarantee that the tree roots in the area will not be damaged. =	$26,829.39
Restock of unused 20" PVC pipe =	$518.00
Total Added Costs =	$60,296.39
Deduct Item 15302-6 - 20" PVC pump discharge pipe 157 LF @ 96.00 =	($15,072.00)
Total this Agreement =	$45,224.39

PROJECT: Addison Airport Tunnel

DATE: 6/18/98 — SUPPLEMENTAL AGREEMENT NO. 18

SHEET NO. 1 OF 2 — CONTRACT NO: DNT-260

H B Zachry Company (CONTRACTOR) — PO Box 531558, Grand Prairie, TX 75053 (ADDRESS)

I AGREEMENT SHALL PERTAIN TO ONLY ONE CONTRACT AND SHALL BE NUMBERED CONSECUTIVELY FOR EACH CONTRACT.
AUTHORIZATION IS HEREBY REQUEST FOR THE PERFORMANCE OF EXTRA WORK UNDER THE ABOVE CONTRACT
DESCRIBED AS FOLLOWS (ATTACH DRAWING OR SKETCHES WHERE APPLICABLE) (EXPLAIN BELOW IF REQUIRED)

It has been found necessary to alter the concrete paving designs to (1) install jointed reinforced concrete pavement in lieu of continuous reinforced paving with sawed joints for the paving outside the tunnel area Design now calls for #3 rebar on 2'-0" centers - both ways with Dowell baskets spaced at 20' centers (3/4" dowels at 15" centers in basket); (2) inside tunnel, place 10" continuous reinforced paving, and eliminate transverse sawed joints. Price reduction as follows:

ITEM	QUANTITY	UNIT	UNIT $	TOTAL $
Concrete Pavement as bid	(12.362)	SY	$28.00	($346,136.00)
* Concrete Pavement, Jointed Reinforced	12.362	SY	$27.25	$336,100.70
10" Paving as bid	(4.593)	SY	$35.00	($160,755.00)
* 10" Concrete Paving Cont. Reinf.	4.593	SY	$34.33	$157,677.69
Net this change				($11,112.61)

* New Prices for these concrete paving items

There is conflict between water line "W-3" and Wall Panel #11 drilled shaft. It will be necessary to add an additional drilled shaft of 12.5 LF to correct the conflict. Using existing bid item add:

Item 416 18" Drilled shaft	12.50	LF	$20.00	$250.00

In order to reduce the lane closures on Addison Road from 2 lanes to one lane, and to protect existing trees along Addison Road, the direction of the 8" bored line need to be changed, and the tie in to the thrust block. Total additional work not covered by bid items is $2,104.96

TOTAL PRICE THIS SUPPLEMENTAL AGREEMENT ($8,757.65)

Water line W-4 alignment change to avoid ripping up Addison Road and extensive traffic control. The 20" water main is located further out in Addison Road than shown on the plans. Therefore, it is proposed to bore the 8" line over the existing 20" line and make the tap on the eastside as shown on the attached drawing. This will allow a one lane closure on Addison Road.

ITEM	QUANTITY	UNIT	UNIT $	TOTAL $
Additional fittings and trust blocks	1	LS	$2,105.00	$2,105.00
Additional 8" bored hole PVC water pipe (Item 2660-4) (Bid Item 2660-4)	25	LF	$400.00	$10,000.00
Reduction 8" cut-and-cover PVC water pipe (Bid Item 2660-3)	(50)	LF	$32.00	($1,600.00)
SUBTOTAL				$10,505.00

Geotechnical instrumentation installations at night and on weekend near airport runway. (NTTA accepted Disputes Review Board recommendation - Heaning Dispute No. 1)

ITEM	QUANTITY	UNIT	UNIT $	TOTAL $
Install multi-position borehole extensometers BEX-1 and BEX-1 additional costs	1	LS	$5,332.00	$5,332.00
Contractor's mark up	1	LS	$1,333.00	$1,333.00
SUBTOTAL				$6,665.00

Drainage improvement on concourse Plaza parking lot (SW corner Addison and Keller Spring Roads). A portion of the existing parking lot, which was to remain in place, will not drain. That portion of the parking lot is to be removed and replaced as shown. Attached sketch shows area to be removed and replaced.

ITEM	QUANTITY	UNIT	UNIT $	TOTAL $
Additional cutting and replacing paving (Bid item - 400)	41	SY	$80.00	$3,660.00

In the area of the rock slides, it has been deemed necessary to reinforce the existing rock slope by placing additional rock bolts, welded wire fabric, reinforcing steel and concrete. This necessitates a different method of placing NE Walls 22, 23, &24. The total cost of this is as follows:

Repair of Rock Slide and Erection of NE Walls 22, 23, & 24

Dowel & place welded wire fabric at rock face			$21,340.89	
Dowel & set rebar & fill area			$42,311.40	
Spice and extend rock anchors			$11,007.37	
Furnish and set FW wall panels			$37,931.91	
Install underdrain			$865.79	
Form and place leveling pad			$1,630.94	
Spice/Extend Ty 503 Bars and install Miraft Filter material			$21,859.56	
Brace and shore FW panels			$9,556.72	
Install water stop and water proofing			$9,235.41	
Place mass concrete in fill area (5 pa/US lifts)			$76,713.84	
Reform bottom footing for LW2 walls and pour concrete			$5,822.54	
Additional work materials installed as backfill on LW2 walls			$10,622.64	
Deduct 2470 SF of FW Walls	(2,470.00)	SF	$24.00	($59,280.00)

TOTAL PRICE THIS SUPPLEMENTAL AGREEMENT $189,617.41

SUPPLEMENTAL AGREEMENT FOR EXTRA WORK
22

PROJECT: Addison Airport Tunnel

DATE: 8/27/98 — SUPPLEMENTAL AGREEMENT NO. 22

SHEET NO. 1 OF 2 — CONTRACT NO: DNT-260

H B Zachry Company (CONTRACTOR) — PO Box 531558, Grand Prairie, TX 75053 (ADDRESS)

I AGREEMENT SHALL PERTAIN TO ONLY ONE CONTRACT AND SHALL BE NUMBERED CONSECUTIVELY FOR EACH CONTRACT.
AUTHORIZATION IS HEREBY REQUEST FOR THE PERFORMANCE OF EXTRA WORK UNDER THE ABOVE CONTRACT
DESCRIBED AS FOLLOWS (ATTACH DRAWING OR SKETCHES WHERE APPLICABLE) (EXPLAIN BELOW IF REQUIRED)

It is desirable to alter the tunnel walkway from a solid floor reinforced concrete structure to a structure with a meshed T-501 rail on the street side of the concrete footings, and a 6" precast sidewalk supported by steel angles on the back of the T-501 and the face of the tunnel lining. This forms a "crawl space" that will carry the utilities (water and electrical) through the tunnel. These details are shown on the plans submitted by H. B. Zachry (with revisions) dated 6/8/98.

Total Lump Sum price for this addition is $28,250.00 C

3008.SP Expansion Joints are needed between the concrete footing and the 10" concrete pavement. These longitudinal expansion joints will be 3/4" preformed fiber board, and the top of the joint routed and sealed with hot poured rubber joint sealing compound.

Total Lump Sum price for this change is $12,367.59 b

Fall out repair at approximately Sta 20+95 to 21+55 and add extra tunnel support.

Total Lump Sum price for this change is $60,620.68 C

The plans and specifications were unclear as to the amount of steel fibers in the footing block along the edges of the tunnel. An agreed-upon price has been established for this work.

Extra fibers in footing block $27,770.00 d

The specifications require that the concrete used in the tunnel liner be placed at not more than 80 degrees F. Due to the delay caused by utility adjustments in the early stages of the work, the placing of the liner was delayed by approximately two (2) months. This moved the schedule of liner placement into the warmer months and necessitated the addition of ice and chilled water to the concrete in order to meet the temperature specifications. The change for this for the two months is as follows:

Ice and chilled water for temperature control $101,850.00 C

Substitute reinforcing steel hangers that would provide a better seal in the tunnel liner. These hangers were patented, and cost more than the hangers that the contractor originally wanted to use. As agreed-upon price has been established for the difference in material costs.

Total price change for hangers	$26,182.00
Subtotal	$265,040.47
Bond at 1%	$2,650.40
TOTAL PRICE THIS SUPPLEMENTAL AGREEMENT	$267,690.87

	SUBTOTAL				$263,845.24

In order to provide drainage from behind the retaining wall from approximate Sta 29+50 to 34+02, it is necessary to add some 5' wide Ty A Flumes, approximately 150 LF of 15" storm sewer pipe, and approximately 175 LF 21" pipe. Also, two Type F inlets will be needed. The prices for these items are as follows:

Approximately 150 LF of 15" CI #II pipe @ $50.27/LF =	$7,540.50
Approximately 175 LF of 21" CI #II pipe @ $66.35 =	$11,436.25
Approximately 453 LF of Ty A Flume w/ curb @ $ 39.75 =	$18,006.75
2 each Ty F inlets @ $ 850.00 =	$1,700.00
	$38,683.50

It was determined that temperature control was necessary for the concrete used for the deck pours at the cut and cover section near Station 10+00. Payment for this item previously approved by NTTA. The cost of adding ice and chilled water is as follows:

Chilled Water and Ice	CY	252.00	$25.94	$6,538.88

DNT-260 Supplemental Agreement No. 25 — Page 3 of 3

In the design of the side repair 4 sacks per cubic yard concrete was to be used for the fill by design. This necessitated the extension of the Type 503 reinforcing bars on the N. E. Retaining wall. Zachry proposed to place 5 Sk (300 LB) concrete in order to be able to complete the work at an earlier date. Since 5 Sk. Concrete was used for this, the need for the extension of the bars became unnecessary. Therefore, a credit is due to NTTA for this change. The credit is as follows:

Eliminate extension of Type 503 bars	LS	1.00	(8,000.82)	($8,000.82)
TOTAL THIS SUPPLEMENTAL AGREEMENT				$298,064.80

NTTA has requested the contractor to construct the footing as per plans furnished for the communications tower and erect owner furnished tower on the footing at a site adjacent to the tunnel at the CC and Tower MEP room. Contractor assumes no responsibility of the operations of said tower, since it is owner furnished. Total cost is as follow:

Antenna Footing	LS			$7,041.00
Erection of Tower				$1,635.00
TOTAL				$8,676.00

Addendum No 1 changed the fuel for the emergency generators from diesel to natural gas. There were no provisions to connect the natural gas supply to the generators. Cost to install the meter and plumbing is as follows

Natural Gas Supply installation for Emergency Generators LS TOTAL $6,208.29

The City of Addison fire department required a change in the Tunnel Fire Protection Equipment. The cabinets were ordered to be changed to stainless steel cabinets and 150 LF of fire hose per cabinet. Net change after receiving credit for the already purchased equipment is as follows:

9 each. Fire Cabinets with specified hose and nozzles $717.33 ea. $33,445.97

If left alone, serious erosion would occur between the headwalls of Culverts 2 & 3 headwalls. It was decided to place a rip rap channel between these two headwalls. Total price for this approximately 113

Contractor proposes to install a directional arrow using reflective markers near the east bound exit. Total price for this work including traffic control is as follows:

Install Directional Arrow $437.50

An electrical change is needed to accommodate the removal of the east & west sump for maintenance
Total cost of this change is as follows

Electrical work for the disconnect/connect of the pumps at the east & west sump areas $3,240.27

Additional equipment (strainers and regulators) is needed to connect the emergency generators to the natural gas pipeline. Total cost for this installation is $2,146.05

The sign foundation for overhead sign #1 had to be reworked in order to miss water line W-1, and electrical cables. This involved re-working the steel for the drilled shaft, and furnishing a sonalute for the top of the drilled pier.
Total cost of this operation is $2,370.62

The material supplier, TXI, in error, put fly ash in approximately 54 CY of concrete on Keller Springs, eastbound lane, south side near Addison Road. The strength of the concrete averaged 496.25 instead of 555 as required. A deduction of 30% will be made as per item 420.25 as follows

ITEM #	DESCRIPTION	PER	QUANTITY	COST	TOTAL
	360 Concrete Pavement CP 8"	SY	(225.42)	$27.35	($5,165.24)
	360 Concrete Pavement CP 9"	SY	225.42	$19.15	$4,316.79
					($1,848.44)

Upon completion of the driveway at Concourse Plaza West, there was water trapped on the small apron west of the driveway. It was decided to add a small apron and an inlet directly into the top of the 30" storm sewer line.
Total cost of this apron, curb, and inlets is as follows:

ITEM #	DESCRIPTION	PER	QUANTITY	COST	TOTAL
4658SP	Special inlet and appurtenances	LS	1	$1,737.50	$1,737.50

Page 2 Of 3

DNT-260 Supplemental Agreement No. 29

NTTA requested a concrete pad & posts to protect the Photoelectric cells on the north side of the electrical room
Total price for this item is as follows:

Labor $443.38
Materials $69.75
$513.13

While laying Storm Sewer Line B, a sanitary sewer line was encountered that required the flow line to be raised. Eleven ponts of 60" pipe had to be removed and relaid at the higher elevation. Total cost is as follows

Equipment $1,664.56
Labor $3,548.20
Material $547.46
Field Engineer $808.43
Total $6,568.65

Contractor was asked to extend the 2 1/2" coated metal conduit. to the toll plaza from the tunnel plan termination
Total lump sum cost for this item is as follows

Extend 2 1/2" conduit to toll plaza $17,600.00

Several items of electrical work were increased to facilitate construction. Contractor has agreed to furnish these over-runs at the original bid price as follows

Extend 1 1/2" PVC coated conduit from plan termination to accommodate roadway lighting
140 LF @ $13.50/LF= $1,890.00

Install pull & junction box to accommodate road lighting $3,400.00

Extra 4" PVC coated conduit to accommodate change from electrical room to generators
440 LF @ $44.00/LF $19,360.00

Total this Supplemental Agreement $57,413.28

There were no provisions for panic release bar on the inside of the door to the MEP room. The cost of this installed is as follows:

Material $252.45
Labor & Burden $193.75
Total this change $446.20

The shotcrete wall near the east portal has been replaced with a keystone retaining wall. This necessitated additional excavation for the Type A flume. Also, riprap needs to be added on both sides of the flume, also requiring additional excavation. This added excavation is in hard Austin Chalk, and has very limited access to the usual excavating equipment. Some removal of the shotcrete wall is also necessary for the riprap. Cost of this item is as follows:

Extra Rebar & Extra Excavation with rented backhoe $5,348.71
417.87 SY Riprap (Bid price) @ 41.00 $17,124.47
Total this change $22,473.18

Water is seeping into the electrical box located at the east portal facia wall. Contractor proposes to raise the box and construct a curb around the box. Total lump sum price for this change is $471.50

The fence contractor reduced the size of the post holes, thereby reducing the amount of concrete necessary to set the fence posts. We feel that with the rock encountered, and the mow strip poured around the posts, the fence, as installed meets the intent of the specifications. However, NTTA requires a reduction in costs to offset the saving to the contractor. Total credit for concrete not used is as follows:

Credit for reducing amount of concrete is ($1,650.00)

DESCRIBED AS FOLLOWS (ATTACH DRAWING OR SKETCHES WHERE APPLICABLE) (EXPLAIN BELOW IF REQUIRED)

In January, 1998, a rock slide occurred near the east portal of the Addison Airport Tunnel. At the time, the amount of clean up was difficult to determine, and it was decided to do the clean up by Force Account. All repair work has been paid by agreed upon prices. The amount of time added to the contract has now been established as 27 calendar days. This is the time that the completion of the contract was actually delayed by the rock slide. Even though the clean up occurred over several weeks, other work was being accomplished at the same time. Charges for project overhead have been gathered and are summarized below. Charges for the clean up items are also summarized. Paid invoices have been delivered to substantiate these charges, and are on file in the project records. Payroll records are a part of these proofs of expenditures. The summaries are as listed:

Overhead for 27 calendar days:

Labor	$32,148.24
Equipment	$8,769.60
Misc., Project office overhead	$7,787.90
Subtotal	$48,655.74
.0625 Home office Overhead	$3,042.86
Subtotal	$51,728.60
Profit @ 5.33%	$2,757.13
Total Overhead	$54,485.73

Force Account work for removal of Slide debris:

	Direct cost	Addn'l OH	Profit	Total
Labor	$16,162.32	$1,618.23	$2,666.78	$20,445.33

The plans provide for cast iron grates over the trench drains. These were installed, and have proven to be undesirable due to excess breakage. NTTA requests that steel grates be installed in lieu of the cast iron grates.
The cost of this is as follows:

Labor	Lump Sum	$2,791.95
Supplies	Lump Sum	$1,029.31
* Equipment	(per shift)	$1,730.00
Materials	Lump Sum	$3,965.00
Estimated Total		$9,516.28

* If more than one shift is required, an additional price of $1730.00 will be paid to the contractor for equipment.

The Town of Addison has requested covers over the fire connections inside the tunnel. Cost to add 9 covers is as follows:

Materials & Supplies	$18,667.51
Labor & Equipment $1755.90 per shift	
* Estimate 3 shifts	$5,267.70
Estimated Total	$23,935.21

* Number of shifts to be paid are the actual number of shifts that it takes to do the work.

Estimated Total, This Supplemental Agreement $33,471.47

ZACHRY-MONTEREY — REQUEST FOR INFORMATION — ADDISON AIRPORT TUNNEL - JOB #9080.01 — 111

MAY 16 1997 — HB2 # 111 — RFI No.: 005 — Date 05/12/97

Subcontractor (if applicable): _____

Subject: Membrane Lining - Inspection of wire strands
Drw/Spec. No.: Special Spec 4103-3.1.D.

Reply Req'd By: D. Hubenak
Distribution List:
Jim Roskie - Monterey
Job 9080.01 - 005

Problem:

The above referenced section requires "inspection of the shotcrete lining and bend all wire strands which protrude so that they are parallel to the shotcrete surface and will not damage or puncture the synthetic membrane." Experience with this method is that it is theoretical but not practical. The rough and piercing texture of the fiber shotcrete does not provide adequate protection of the membrane liner.

Possible rework or extra work involved with this RFI? Y N
Delays in project execution involved with this RFI? Y N
Estimate of time spent evaluating, finding alternate solution to RFI? Engineering: 0.5 Hrs
Surveying Crew: Hrs
Other: Hrs

Proposed Solution by Contractor By: |Date: |Reviewed By:

We recommend placing a thin coat of fiberless shotcrete over the fiber shotcrete to protect the membrane from tears and punctures. Cost to place fiberless shotcrete will be per cubic yard of fiberless shotcrete. Please request issuance of a change order for fiberless shotcrete for membrane protection.

Response by Construction Management:

Solution By: |Date: |Reviewed by: |Date:

Proposed Solution by Contractor By: |Date: |Reviewed By:

We propose to overexcavate 2" to 4" to allow for placing an additional 1" of fiberless shotcrete. The additional excavation and concrete for the tunnel liner will be at no cost to the owner. The additional 1" of fiberless shotcrete will require approximately 525 CY @ $235.00/CY = $123,375.00
Please request issuance of a change order for fiberless shotcrete for membrane protection.

Response by Construction Management:

Solution By: |Date: |Reviewed by: |Date:

ZACHRY-MONTEREY — REQUEST FOR INFORMATION — ADDISON AIRPORT TUNNEL - JOB #9080.01 — 110

HB2 # 110 — RFI No.: 004 — Date 05/12/97

Subcontractor (if applicable): _____

Subject: Membrane Lining - Rebar Reinforcement
Drw/Spec. No.: Special Spec 4103-3.3.1.

Reply Req'd By: D. Hubenak
Distribution List:
Jim Roskie - Monterey
Job 9080.01 - 004

Problem:

The above referenced section specifies rebar reinforcement to be supported by the liner. Recent discussions with the manufacturer indicate this design is "not adequate to support the rebar reinforcement." This design has been implemented, without success, on other tunnel projects supplied by the manufacturer.

Possible rework or extra work involved with this RFI? Y N
Delays in project execution involved with this RFI? Y N
Estimate of time spent evaluating, finding alternate solution to RFI? Engineering: 0.5 Hrs
Surveying Crew: Hrs
Other: Hrs

Proposed Solution by Contractor By: |Date: |Reviewed By:

We recommend using epoxy rock anchors as shown in the attached drawing. This system has been implemented successfully on other tunnel projects and a similar system was utilized on the DART tunnel. There will be no cost to implement this rock anchor system. Please request issuance of a change order for the recommended system.

Response by Construction Management: INSUFFICIENT DATA PROVIDED. AGAINST ORIGINAL SEALED ENGINEERING AND CONTRACTUAL DOCS & CONCEPTS. ORIGINAL DESIGN AS INCLUDED BOLTING WITH EMBEDMENT AND ATTACHMENT AND SEALING MEETS THE INTENT OF ENGINEERING SPECS AND CONTRACT DOCS. ANY ALTERNATE SPECS MUST BE SUBMITTED, REVIEWED AND APPROVED BEFORE IMPLEMENTATION. ANY ADDITIONAL EXCAVATION, SHOTCRETE, REBAR, ANCHORS, ETC. REQUIRED TO IMPLEMENT ANY ALTERNATE SYSTEM WILL BE AT NO ADDITIONAL COST TO OWNER. THAT MUST ASSIST US IN EXPEDITIOUSLY ASSESSING THE PROPOSED SOLUTION.

Proposed Solution by Contractor By: Jim Gardner |Date: 5/13/97 |Reviewed By: Majed Limam

Attached are two alternatives:
1. H. B Zachry believes this option would be safer and simpler because it requires a shallow ditch.
2. Requires a deep trench. This solution still is acceptable to H. B. Zachry Co.

Both options should allow for the construction of our utilities.

Thomas Kelley
Majed Limam
Renaissance

Problem:

No existing telephone line is shown on the western side of Dooley Road on sheet C33 (Existing Utilities). In actuality, a telephone line is located on that particular area of the project (just off of existing west side curb). This RFI is to request that the line be relocated as soon as possible so that yard utilities construction can proceed without any further delays. This phone line was encountered on Saturday 5/10/97 by a Renaissance crew, and we are currently waiting for any damage assessment by Southwestern Bell Telephone. Your prompt attention to this matter is greatly appreciated.

Proposed Solution by Contractor By: J. Gardner |Date: 05/12/9 |Reviewed By: C.Terrana

In the area adjacent to the parking lot, we propose to locate the T.U. electric poles approximately 1 foot from the back of the parking lot curb. As per the attached drawings, we also propose to move the gas and water lines closer to the curb to avoid the footings. We will return to the original utility locations (see RFI 103) in the area once space allows.

Problem:

The above referenced section specifies a design strength for the shotcrete of 3,500 psi. Section 1.2.D.7.j.ii., Section 1.2.D.7.j.i. and Section 3.1.A.8.a. reference 28 day strength of 4,000 psi. Please advise.

Possible rework or extra work involved with this RFI? Y (N)
Delays in project execution involved with this RFI? Y (N)
Estimate of time spent evaluating, finding alternate solution to RFI? Engineering: 0.25 Hrs
Surveying Crew: Hrs
Other: Hrs

Proposed Solution by Contractor By: |Date: |Reviewed By:

Response by Construction Management:

Under section 1.2.D.7.j.i ~~the~~ is a remark which states the 28 day strength differs from the design strength due to more lenient conditions under preconstruction Testing this coupled with section 1.1.C. tells me that the design strength is as stated in the special specification @ 4,000 psi and the 28 day strength is 4,000psi

This should clear up any questions you may have. I have verbally notified Majed at H. B. Zachry at no holiday weather no visit inlet agreed

Proposed Solution by Contractor By: Carlina J. Terrana |Date: 04/21/97 |Reviewed By: James Gardner

This Proposal suggests that after the closing day of each month, H.B. Zachry representatives and Brown & Root representatives will review the monthly estimate and submit for payment to the Texas Tollway Authority by Friday of the next week. The Texas Tollway Authority will then have 15 days to pay H.B. Zachry Company for the work completed and submitted in the monthly estimate. The preferred method of payment to H. B. Zachry Company is a direct deposit transaction which can be set up upon approval of this RFI.

Subject: Interfrence between pipe encasement at Line B and Dooley Road

Drw/Spec. No.: C28, T108A

Problem:

There are two discrepancies associated with the pipe support footing at line B.
1. The top of encasement elevation at the southern end of the structure protrudes into the lime @ CTB at Dooley Road. As shown on the drawing attached, the elevation of the southern edge is at around 634.32. The top of asphalt elevation at Dooley is 634.92, into 7 1/4" higher. Dooley calls for 6" of lime, 6" of CTB and 4 1/4" of Asphalt. The bottom of subgrade at that location would be around 633.37.
2. The station and elevation (Flow line of 60" RCP) are off. The pipe alignment intersects the CL of tunnel alignment at sta. 4+15.4 at a FL elevation of 626.5± (not 628.40)

Proposed Solution by Contractor By: Renaissance/ Ross Navarete Date: 6/13/97 Reviewed By: J. Gardner

In this area, there is adequate distance (> 12 ft.) between the sanitary line and the proposed water line to move the sanitary line closer to the water line and avoid having to run directly beneath the existing ductbank. By crossing the ductbank at the north and relocating the sanitary line about 2 feet to the west, the problem can probably be avoided. Field dimensions will be recorded and incorporated in the final 'As-builts'

Response by Construction Management: HDR HAS REVIEWED CONTRACTOR'S PROPOSAL TO MOVE SANITARY WITH WATER DISTANCE AND CROSSES WITH MINIMUM SPACING. THEREFORE, IF WATER LINE AND EQUIPMENT CAN BE WORKED AROUND THESE OBSTRUCTIONS, THEN WE DO NOT HAVE A SANITARY SEWER WITH SPACING IN QUESTION. CONTRACTOR TO USE SDR-26 PVCP. AUTH TO PROCEED GRANTED AS BUILTS WILL BE REQUIRED. CONTRACTOR TO PROCEED ALONG CONSIDERED AS BUILTS

Subject: Control of Materials

Drw/Spec. No.: Special Provision to Item 6 and Item 5.5

Problem:

Section 6.2. of the above referenced Special Provision states "Design, sampling, and testing, including professional quality control efforts in general, will be performed by engineering testing laboratories. Such services will be provided at the direction and expense of the Authority, except as may be specified for Item 441 and SP, "Steel Structures". An exception to the above is the requirement that the Contractor develop all Portland cement concrete and hot mix asphaltic concrete designs and prepare and analyze trial and hot bin batches of the different designs as appropriate, as directed by the Engineer, entirely at its expense." Item 5.5 of the TxDOT Blue Book states "...plans shall govern over standard and special specifications, and special provisions shall govern over both standard and special specifications and plans.
It has been brought to our attention that the shotcrete testing during construction is the responsibility of the Contractor. The above referenced Special Provision and General Requirement indicate to us that the required design and trial testing is the expense of the Contractor and the required testing during construction is the expense of the Authority, therefore, we plan to use Mas-Tek Engineering & Associates to provide the design and trial tests at our expense and expect the construction testing to be at the Authority's expense.

Subject: Conflict in location of San. Sewer 'A' manholes & Gas line

Drw/Spec. No.: Sheet 35A

Problem:
In the area where Sanitary Sewer 'A' and the proposed third party Gas line both pass beneath future Dooley Rd., the two sanitary manholes on either side of Dooley will be built against the outside wall of the gas conduit.
At the time the manholes will apparently be built, this gas line will be active.

Possible rework or extra work involved with this RFI? N
Delays in project execution involved with this RFI? N
"imate of time spent evaluating, finding alternate solution to RFI? Engineering: Hrs
Surveying Crew: Hrs
Other: Hrs

Proposed Solution by Contractor By: J. Gardner Date: 5/22/97 Reviewed By: J. Gardner

In this area, where the gas line, sanitary line and water line are all 'squeezed' into a narrow slot, there appears to be room to move the two sanitary manholes on either side of new Dooley Rd. directly to the North. Moving the manholes (and the connecting sewer pipe) 4 feet to the north would eliminate having to build the 4' diameter manholes directly alongside an active gas line later. This short distance would change the slope of the sanitary pipe slope so slightly, that adjusting manhole elevations probably would not be necessary. Also, there appears to be adequate room for the sanitary line to still pass under the storm sewer in this same area, if moved.

Proposed Solution by Contractor By: Date: Reviewed By:

We recommend using a volumetric batching plant. The plant we propose to use is a Model RPM3-18.
Attached is a description and layout of the plant and past projects where this type of plant has been used. The actual plant we propose to use was used on the Super Collider project in Waxahachie, Texas and on a UDOT project.
Reasons for using a volumetric plant are as follows:
1. We will batch 4-5 CY per shift during a 24 hour period. Commercial plants will not dedicate a plant for night work because of the small demand and DOT driver restrictions.
2. The plant will be used for batching only. A mixer truck will be provided to mix and transport the shotcrete.
3. This plant will be used for fiber shotcrete only. All other non-fibered shotcrete will be supplied from a commercial plant and placed only during the day shift.
4. The small size of the plant will allow us to locate the plant and materials nearer to the tunnel in lieu of a larger site required for a weighted plant.
5. The location of the plant's close proximity to the tunnel will provide security in case of emergency.

Subject: Rock bolts on PW walls — Reply Req'd By: 26-Aug-97
Dwg/Spec. No.: S86 — Distribution List: Jim Gardner; Spike Hubenak; Ross Navarette

Problem:
RFI 139 concerned the borehole diameters, whether the 6" on the plans or the 1.5" diameter needed for the approved rock bolt/resin anchorage combination would be used. The RFI also asked if the rock bolts are to be post-tensioned or are simply dowels. Sheet S86 of the plans shows a plate to be positioned 9" off the excavated rock face for embedment within the closure pour. Tensioning of the anchor would require the plate to be directly against the face of rock.

Subject: Manhole location on sanitary line C, interfere with slope — Reply Req'd By: ASAP
Dwg/Spec. No.: C13, C16A — Distribution List: Ross Navarette; Jim Gardner; Renaissance

Problem:
Sheet C13 calls for the 4" top soil coating/sodding slope to be at a 2 to 1 slope. The bottom of the slope starts 2' from the edge of the type A gutter, the top of the slope is at 5' from the ROW line. Manhole on sanitary sewer line C (C6439, S4 RT) is also shown to be at the top of the slope on sheet C16A. As laid out in the field, in order to achieve the 2 to 1 slope, the top of the slope will be located much further than shown in the contract drawings (towards the south). That will be a problem because the manhole will be located right on the middle of the slope, and will be protruding in the air. In order to keep the top of slope line as shown in the drawings, we will have to go with a 2 to 1 slope instead. That slope may be too steep for maintaining the grass at a later date.

Dwg/Spec. No.: T136,T130 — Distribution List: Jim Gardner; Spike Hubenak; Ross Navarette

Problem:
Instrument I5, SRP7, and I6 were installed as shown on the construct drawings. Please look at attached drawing showing the interference between the east portal retaining wall footing and these three instruments. The worse case discrepancy is with the I6 located at sta. 26+15, 28' right of CL of Tunnel (6 in right at the edge of the footing. Existing ground elevation at this location is around 636.5' I5 and SRP7 are also too close to the footing (4', 5' respectively). The bottom elevation of the footing is at 629.22, that will generate a 7 to 8 ft excavation to build the footing. Sloping will be required on this excavation due to the nature of the ground at that location. The two instruments will interfere with the sloping and excavation of the footing. Please advise.

Proposed Solution by Contractor By: Date: Reviewed By:
1. Allow barrels to be used instead of traffic barrier. During the culvert construction, the barriers will only be a added obstruction that hinders installation.
2. Allow the box culvert to be built in one phase like the pipe culvert being built across the same road further to the west. Even if built in two phases, the box culvert joints would have to extend past the Phase 1 pavement into the existing road, disrupting traffic for a day. The entire culvert crossing could be done in one day--with better final results.

RFI No.: 127
Date 08-Jul-97
Subcontractor (if applicable): _____ Originator: Majed Limam
Subject: Conflict between 60" storm sewer B and existing 8" sanitary — Reply Req'd By: 08-Jul-97 (ASAP)
Dwg/Spec. No.: Sheet C40, C41 — Distribution List: Rene; Jim Gardner; Renaissance

Problem:
Pipe crew encountered existing sanitary sewer (8") conflicting with the 60" storm sewer line B. As shown on the two pictures attached, the 8" sanitary is crossing the 60" and protrudes in the way of the connection between the existing 60" and line B.
The flow line of line B at the location shown on the picture (about 25' from the sanitary) is 623.61'. At the connection area, the flow line of the 60" old RCP is 620.97'. The top elevation of the sanitary at the intersection with line B at closest is 622.07. Line B will have to go up (counter the flow) by 0.90' in order to avoid the sanitary sewer.

Subject: ROW at Keller Springs - Addison intersection
Drw/Spec. No.: C31, P149

Problem:
On Sheet C31, at the northwest corner of the intersection of Keller Springs and Addison Roads, the existing right of way runs north-south, and then runs eastward towards the intersection. This leaves a section of area which falls within neither the existing right of way limits or the new right of way limits. The pump discharge pipe crosses this area on Sheet P149.
Also need clarification on the exact location and meaning of "Existing Right of Way". Is it a ROW that TTA has already purchased? Can H. B. Zachry perform work in that area? The pump discharge would run through a parking lot area belonging to an existing business. It will also close access to the parking lot from the north driveway.

Entered As Built Sht 93 TG

Subject: Constructibility Problem on the FW Retaining Walls
Drw/Spec. No.: S85, S86

Problem:
The bottom row rock bolts, on the FW type wall (NB RW), cause a constructibility problem. The elevations of the bottom row rock bolts, shown on sheet S85, are lower than the elevations of the top of line rubgrade in that area in front of the FW wall. The worst cases occur on panels 23, 24, 25, and 29. The difference in elevation between the top of subgrade and the bottom rock bolts in these panels vary from 2.12' to 2.80'. In order to drill short bolts, H. B. Zachry will have to over excavate in front of the wall by as much as 8 to 10 feet in order to provide enough room for the drilling machine to drill a horizontal bolt.

Extend As Built Sht 93 TG

Possible rework or extra work involved with this RFI? Y
Delays in project execution involved with this RFI? Y
Estimate of time spent evaluating, finding alternate solution to RFI? Engineering: 2 Hrs; Surveying Crew: 1 Hrs; Other: Hrs

Proposed Solution by Contractor By: Majed Limam Date: Reviewed By:
In order to circumvent the problem, H. B. Zachry proposes to install these bolts (just the bottom row) at a 30 degree angle. That will allow the drill to operate without major over excavation of the subgrade. The structural excavation for the leveling pad will allow for the drilling of these bottom bolts at that angle. See attached sketch for details.
Please respond ASAP, H. B. Zachry is starting drilling the rock anchors on the NE RW starting 9/15/97.

THE SECOND OPTION IS TO EXCAVATE TO MEDIUM BROWN ORGANIC SOILS AND DRILL HOLES HORIZONTALLY, AND IN ADDITION, WITH STRUCTURAL CONCRETE. — A DAY RDEN

Response by Construction Management: HDR CONCURS WITH PROPOSED SOLUTION TO DRILL THE BOTTOM ROW OF ANCHOR TO INCLUDE ANGLE OF 30 DEGREES AS ATTACHED SKETCH. JUST IN THE ABOVE NOTED HOWEVER NOTE.

Subject: LW2 drainage mechanism into gravel drain
Drw/Spec. No.: S93

Problem:
H. B. Zachry proposes to do away with the drainage nut shown on sheet S93, and extend the weep holes to drain directly into the gravel drain behind the FW panels. It is important to note that H. B. Zachry had to undercut the slope of the LW2 footing due to the location of the face of rock cut in the FW panels undercuts. Please look at attached sketch for better understanding of the situation.
H. B. Zachry believes using the weep holes draining directly to the gravel drain will improve the overall drainage system and the construction of the wall. The drainage nut will deteriorate with time and will be damaged by the weight of the footing on top. That will cause drainage problems and will not allow the proper drainage of the water into the gravel.

Subject: Inadequate drainage into Y inlet and grate inlet on Line A Stores Sewer
Drw/Spec No.: C19, C40

Problem:
Based upon field observations during rains (approx 2-3 inches) the last two days, it appears the provisions shown in the plans are inadequate for draining the 'Access Easement' (around Sta. 7+10, Centerline Project) into the 'Y' inlet (4+05, line A) and the 36"X36" grate inlet (PCL Sta. 7+42). The heavy flow of water, coming from the parking lots, open fields, and Midway Rd. is collecting and then traveling down the access road at a relatively high velocity. It appears this flow cannot be diverted into these inlet(s) (located 30 ft. to either side of the access road) with just a 6" curb at the end of the road. We have built a trench and a 3 ft. high temporary 'diversion-berm' which, for the time being, is able to hold the rainwater from pouring into the tunnel entrance ramp while the 'Y' inlet drains. The grate inlet to the east of the access road does not help this road drainage since it is higher than the existing road. Please see attached sheet for access road elevations. If left as shown in the plans, we feel there will be a chronic problem with erosion of the slope between the end of the road and the ramp below. The eroded dirt and grass will end up in the sump pits.

Problem:
Sheet C9 of contract drawings shows the island to extend all the way to station 6+15.01 on the roadway pavement section.
Also, sheet C9 shows no 8" slope (1/2"/ft) top soil up to station 6+15.01, it but shows a 2" rounding.
Sheet C19, on the other hand, shows no island from station 3+60 going east. It does show the 8" slope (1/2"/ft) starting at around station 6+50.
Plase advise on the correct pavement section to use from sta. 3+50 to 6+15.

Proposed Solution by Contractor By: Date: Reviewed By:

Install a TxDOT T-501 rail modified to the height of the walkway shown on the plans. Backfill with gravel and top with a 4" concrete sidewalk reinforced with welded wire mesh. The T-501 rail reinforcement will be attached and its stirrups embedded in the footer block. The stirrups will have a 12" spacing for the length of the rail and should provide shear protection.
Since steel reinforcement will be installed in the T-501 rail and the sidewalk, we propose to eliminate the steel fibers in this concrete. A sketch is attached for this proposal.

Response by Construction Management:
HDR (Lemon) - Agree
Apply for change

HDR's fax of 3/2 has not been written. Original Addis. Air. 51 1978 Contract) in Trinity County at Stroud's Store?

Status By: [illegible] Date: 03/11/99 Reviewed by: Date:

We are returning the above-referenced RFI. The RFI concerned H.B. Zachry's request for a change in the concept of the walkway areas of the tunnel. The concept is for a change in the concept of the walkway areas of the tunnel. The concept is acceptable to HDR, however, the final design will have to address the following considerations:

- Add extra #5 stirrup, as shown in red on Exhibit No "A," every 12 inches.
- Reinforced sidewalk to be 4 inches thick, precast in approximately 5' sections. Design sidewalk and its supports for a live load of 150 pounds per square foot. Where manhole frames/covers are noted, cast manhole frame into precast sections and centered as shown on Exhibit "A."
- Provide 2 inch weepholes on 25 foot centers through T-501 rail as shown on Exhibit "A."
- Develop revised details for walkway ladder recess and tunnel handrail anchorage.
- Area between sidewalk and footer to be used as electrical and communication chaseway. No pea gravel will be required, as noted on Exhibit "A."
- Four inch fire line riser to be ductile iron, class 52, flanged ends as shown on Sketch.
- B. Section at Fire Hose Valve, Volume III, Page P150" and included as Exhibit "B."
- Manhole frame and cover with locking lugs to be Neenah R-1741, or equal (catalog page attached). The lugs/ears are submitted as Exhibit "C." The ¼" thick diamond pattern steel plate and appurtenances, as shown on Vol. II, Sheet T127, Detail 1, will not be required. Aforementioned manhole frame and cover to be used in lieu of steel plate cover. However, the recess in the top of the footer at all inlet locations is also required (as shown in Section A, Sheet T126).
- 3-4" conduits for crossovers as shown on Exhibit "D," at Stations 10+60 and 24+85. Encase in concrete as shown in section and make sure conduits do not interfere with utilities or drainage.

This detailed information is for the walkways on both sides of the tunnel. This design to be completed and sealed by a registered Texas P.E. and submitted for approval. The aforementioned considerations that HDR has included in this letter are for a guide only. It will be the responsibility of the contractor to ensure that all areas affected by this change are reviewed and any necessary changes are made.

Subject: Water Line W-4 Bore beneath Addison Road
Drwg/Spec No.: Dwg. C-954 & C-956

Problem:

To tie into the existing 20" water main beneath Addison with proposed line W-4, will require extensive traffic control and the possibility of night work. As an option, Renaissance has proposed closing only the outside lane of northbound Addison Rd. to excavate a receiving pit. The bore would then extend beyond the existing 20" pipe, passing over it. The tap would then be made from the eastside of the water main and the 8" line would then connect from the east. See attached sketch. While requiring a few more fittings and some different trench shoring, this would create much less traffic disturbance. By boring the pipe from the corner at an 'angle' the receiving pit could be built north of the actual intersection of Addison and Keller Springs creating fewer traffic problems. By boring from the intersection, this shouldn't affect trees along west side of Addison Rd. Bore distance would increase somewhat.

Subject: Security Fence @ Airport Taxiway by Fault
Drwg/Spec. No.: NA

Problem:

Due to the fault fallure, H. B. Zachry Co. had to remove a portion of the security chain link fence and relocate the storm water drainage ditch further to the north. H. B. Zachry placed a safety fence inside the ditch, supported by steel posts. The fence had to be lowered at the airport's management request.
It transpired from the Project Progress Meeting of the 3/18/98 that the Addison Airport Management is requesting for the fence to be supported by flexible plastic post with lights. A flexible plastic pipe may not support a safety fence.
Please explain & clarify. Before proceeding, Zachry needs to know the exact details about the procedures to be followed when working close to the Taxiway, and the exact location and type of fencing and protection needed.

Possible rework or extra work involved with this RFI? Y N
Delays in project execution involved with this RFI? Y N
Estimate of time spent evaluating, finding alternate solution to RFI? Engineering: Hrs
Surveying Crew: Hrs
Other: 3 Hrs

Proposed Solution by Contractor By: Date: Reviewed By:

In response to H. B. Zachry's RFI-167 dated 18 March 1998, Brown & Root recommends the following course of action to resolve the conflicting airport and construction safety issues:

a. Place the temporary security fence in the drainage ditch, which is above the rock side area.
b. Substitute the current No. 6 reinforcing bars supporting the orange safety fabric with 2-inch diameter PVC pipe.
c. Place one night flashing traffic light on the PVC pipe vertical or on another type of stanchion, at a point that is closest to Taxiway Tango.
d. Keep the fabric, its supports and the light at the lowest practical safety height.
e. Place a sign on the airport side stating "Do Not Cross over Security Fence".

This recommendation should resolve Addison Airport of Texas, Inc. – ATTI's concern, i.e., low wing aircraft striking the metal supports of the security fence. This recommendation should resolve H. B. Zachry concern, i.e., the public wondering too close to the edge of the rock side area.

Besides this area H. B. Zachry should identify and secure other more critical areas from the general public. Some of the areas discussed in the past were the tunnel and the edge of the southeast shotcreted wall.

Since security and safety of the Project remains a H. B. Zachry responsibility, Brown & Root considers our recommendation, if implemented, as part of the Contract or the indirect costs to any supplemental agreement.

Response by Construction Management:
SEE ATTACHED RESPONSE BY LEMON AND ASSOCIATES FOR AGENCY

We have reviewed RFI No: 164 and find that the proposed joint configuration between the arch and the footer block is an acceptable alternative to that shown on the contract drawings. Please note that the horizontal dimension of 4.00 feet shown on HB2's sketch will vary from 3.80 feet to 4.02 feet depending upon which side of the tunnel and the amount of superelevation of the roadway.

However, considering the benefits of reduced shrinkage cracking in fiber reinforced concrete, we will waive the 50-foot maximum spacing on construction joints for the footer block and walkway pours. The contractor shall select the number and location of construction joints for the footer block and walkway concrete to suit his method of placement. All construction joints in the footer block and walkway concrete shall be normal to roadway grade and have a nominal 6 inch wide by 1 inch deep keyway.

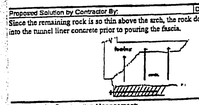
Proposed Solution by Contractor By: Date: 1/20/98 Reviewed By:

Since the remaining rock is so thin above the arch, the rock dowels, or equivalent strength rebars, could be cast into the tunnel liner concrete prior to pouring the fascia.



Response by Construction Management:
We have reviewed RFI No: 159 and have the following comments. This RFI deals with only two (2) rock dowels, one each located either side of centerline of tunnel at the east portal. The current location of these two dowels is shown as 6-inches beyond excavation neat line for the tunnel arch.
To provide 1-foot of clearance from the excavation neat line, move the two dowels 5.5-inches radially outward from the location shown on the contract drawing and look the dowels up slightly. This should provide the contactor with sufficient construction tolerance for potential overbreak in this area.

Subject: Fiber fabric at Retaining Wall Backfill
Drwg/Spec N/A:

Problem:
There is nothing to prevent the granular backfill material behind the retaining walls from percolating into the gravel material beneath it. Although the pipe underdrain contained within the gravel material is wrapped with filter fabric, the gravel itself, is an open-graded material. Over time, the potential exists for fines from the granular backfill, which is in direct contact with the gravel, to enter the spaces between the gravel and begin "packing" – actually impeding the migration of water to the underdrain pipe.

Subject: Construction Joint @ Cut & Cover Deck
Reply Req'd By: ASAP
Drw/Spec. No.: T-115
Distribution List: George James, Jessie Alaniz, James Gardner

Problem:

As discussed in RFI 182, Zachry is requesting the use of a construction joint at the tie in between the cut & cover and the tunnel liner. The remaining pour at the deck will be done monolithically with the last liner pour.
This RFI provides a solution for preventing water to seep through possible cracks between the cut & cover structure and concrete liner.

Possible rework or extra work involved with this RFI? N
Delays in project execution involved with this RFI? Y
Estimate of time spent evaluating, finding alternate solution to RFI? Engineering: Hrs, Surveying Crew: Hrs, Other: Hrs

Proposed Solution by Contractor By: Date: Reviewed By:

Solution: See fig. # 1. Water barrier shown on original configuration will still be provided, by means of welding to membrane liner. 10.5" long key way provided at the construction joint of the deck, along with a waterstop as shown on drawing.
Zachry plans to pump fast concrete liner pour. Disturbance to the water barrier would be minimum as the concrete slowly fills in the area between/around form and membrane liner. That type D waterstop will go around the arch of the tunnel, as radial for as the plans. Extra precaution will be taken during the pour to ensure that waterbarrier stays horizontal.

Subject: Substitution of Porous Asphalt for 6" of Coarse Concrete Aggregate in tunnel

Dwg./Spec.No. Sheet C12

Problem

The stability of the proposed 17 inch (average) thick layer of coarse aggregate below the concrete paving inside the tunnel is questionable. Sheet C12 shows the cross-section detail design. The narrow available width inside the tunnel will force loaded ready mix trucks to pass within a couple feet of the set paving forms while placing paving concrete. There may be a tendency for the gravel to 'shove' or displace under repeated and heavy, moving tire load. Additionally, the vibration and bouncing-action of the Clary-type screed has also been mentioned as a factor that could lead to grade-problems with the paving forms sitting on crushed gravel.

Possible rework or extra work involved with this RFI? N
Delays in project execution involved with this RFI? N
Estimate of time spent evaluating, finding alternate solution to RFI? Engineering 2 Hrs; Surveying Crew Hrs; Other 3 Hrs

Proposed Solution by Contractor By: HBZ Date: 10/27/98 Reviewed By: J. Garber

The top 5-6 inches of coarse aggregate should be replaced with either CTB or an asphalt base. This would still leave 11-12 inches (average) of coarse rock below the asphalt/CTB for any water to percolate through to the underdrain system. If trapped water between the bottom of pavement and the CTB/asphalt is a foreseable problem, porous asphalt (Ty G) asphalt mix should be used instead of CTB or Ty Basphalt. Either would provide a much better base from which to work off of while paving , ultimately creating a better finished pavement.

Brown & Root

16610 Dallas Parkway, Suite 2200 / Dallas, TX 75248

194

December 18, 1998

LETTER NO.: HBZ 260-552
SUBJECT FILE CODE: 765.10

H. B. Zachry Company
PO Box 1004
Addison, Texas 75001-1004

REF: Addison Airport Toll Tunnel
DNT-260

Attention: Mr. James Gardner

SUBJECT: Underdrain along Southeast "Shotcreted" Retaining Wall (RFI-194, EAR-26)

Dear Mr. Gardner:

In formal response to H. B. Zachry's RFI-194 dated 7 December 1998, Brown & Root instructs you to install pipe underdrains along the Southeast "Shotcreted" Retaining Wall according to the attached plan and section sketches. Brown & Root has considered the possible conflict of a future "fascia-wall" footing, the lighting power line (Signing, Pavement Marking, and Illumination Plans (DNT-305) Contract Drawing Sheets 21 22, & 23), the inplace video communications conduits (Contract Drawing Sheet E156 – Note 1-3), and the pavement curb (Contract Drawing Sheets C-24 & C-25). Therefore, place the underdrains as close as possible to the shotcreted wall. Install the underdrains according to the instructions in RFI-157 and Pipe Underdrains Special Provision Item 556. Backfill with Cement Treated Base as shown on the section sketch between the wall and the pavement curb only.

The North Texas Tollway Authority intends not to issue revised Contract Drawing Sheets C-24 & C-25. Therefore, H. B. Zachry shall make the pipe underdrain additions to their as-built Contract Drawings.

Brown & Root considers that the pipe underdrain additions and the cement treated base usage to be a quantity increase change to the Contract. If acceptable to H. B. Zachry, the added underdrains will be paid at the Pipe Underdrain Item 556 & SP bid prices for 6-in. pipe roadway and slope underdrains. The cement treated base will be paid at the Cement Treated Base Item 276 bid price for 6-in. thickness times two, for the two lifts of 6-in. cement treated base.

Contractor / Subcontractor : H.B. Zachry — RFI No. BAR 908 — Date: 22JUN98

Subject: WATER MAIN INSTALLATION BETWEEN C.J.P. & THE CANAL WALL — Originator: YUAN KAN — Reply Req'd By: 6-25-98

DrwgSpec. No.: T-124 # 166 — Distribution List: Tommy Kelley (BAR)

Problem:
SECTIONS A & B call for vertical waterstop in between NW wall and west wall of pump station and at valves (sheet S-80) NW wall and west wall of valve box. Also section D calls for another vertical waterstop in between NW wall and west wall of valve box. Please advise if waterstop is required in these locations.
Dwg S-67 DS wall typical 8" thick. If we knock back to apply waterproofing and PANEL #12 is installed as per S-67, is there any problem with the waterstop being installed between panel #12 and the wall? Is there a need for a construction joint between panel #12 and the wall?
How/the waterstop designed to be installed between) case-in-place wall & P/C section? And precast panels?

Possible rework or extra work involved with this RFI? N Y — Delays in project execution involved with this RFI? N (Y) — Estimate of time spent evaluating, finding alternate solution to RFI? n/a Engineering: Hrs; Surveying Crew: Hrs; Other: Hrs

RFI No.: B&R 924
Contractor / Subcontractor : H.B. Zachry
Date: 01-26-99
Originator: JERRY ROWAN
Subject: Clarification for Location of Sod & Hydro Mulch
Reply Req'd By: ASAP
Drw/Spec. No.: DNT 260, C18, 19, 20, 23, 24 & 25, C28 — ITEM 162 - ITEM 164
Distribution List: B+R MOFC

Problem: Need Clarification For Sod and Hydro Mulch, need Clarification Between STA. 0+07 to STA. 2+20 Behind North Curb, Clarify Area Around Parking lot at The South East Corner of Midway & Keller Springs. What Type of Treatment goes between The Top of Slopes and The Row Line Throughout The Project. Clarify Area between The North Curb And The Existing Parking Lot, between STA. 34+77 To STA. 35+88
DOES ANY TREATMENT GO ALONG DOOLEY ROAD - BOTH SIDE? HOW WERE SY AREA DETAILED ON SHEET C-4. IF A FIELD PROBLEM, WHAT WAS HDR'S LOGIC?

Possible rework or extra work involved with this RFI? N (Y)
Delays in project execution involved with this RFI? (N) Y
Estimate of time spent evaluating, finding alternate solution to RFI? Engineering: N/A Hrs Surveying Crew: N/A Hrs Other: N/A Hrs

Proposed Solution by Construction Manager: W.D. LEECH Date: 26 JAN 99 Authorized By: [signature]
SOD SLOPES GREATER THAN OR EQUAL TO 1:3. HYDRO SEED SLOPES LESS THAN 1:3 AND FLAT AREAS TO FENCE LINES. DO NOT KNOW WHAT TO BEYOND FENCE LINES. PLEASE PROVIDE GUIDANCE.

Response by Designer or other Organization: 3:1 SLOPE OR GREATER, USE SODDING, [illegible] USE HYDROMULCH. QUANTITIES ON SHT. C4. CANNOT DO ANY SODDING EXCEPT BETWEEN MARCH 1 & OCTOBER 1, UNLESS DIRECTED BY ENGINEER.

REQUEST FOR INFORMATION
ADDISON AIRPORT TUNNEL - PROJECT (DNT-260) — 925

RECEIVED JAN 28 1999 Brown & Root

RFI No.: B&R 925
Contractor / Subcontractor : H.B. Zachry
Date: 28 JAN 99
Originator: TOM GRAY
Subject: CONCRETE GUTTER (TY "A")
Reply Req'd By: ASAP / 5 FEB 99
Drw/Spec. No.: C-45; C-23; C-24 — STA 26+25 To 30+60 RT. SIDE
Distribution List: ~~HDR~~ - HBZ -

Problem: THE PLANS INDICATE A 5 FT WIDE GUTTER (GUTTER "C") FROM STA 26+25 TO STA 30+60 ON SHEET C-45. ON SHEETS C-23 & C-24 THE PLANS CALL FOR A 3 FT WIDE GUTTER FOR THE SAME STATIONS. ALSO THERE IS NO BID ITEM LISTING FOR A 5 FT WIDE GUTTER.
PLEASE CLARIFY WHICH SIZE OF GUTTER IS REQUIRED. 3 FT OR 5 FT WIDTH

ADDISON AIRPORT TUNNEL - PROJECT (DNT-260) — 926A

RFI No.: B&R 926A
Contractor / Subcontractor : H.B. Zachry
Date: 8 MAR 99
Originator: W. LEECH
Subject: SAFETY DOOR
Reply Req'd By: 15 MAR 99
Drw/Spec. No.: DRAWING SHEET T-110
Distribution List: B+R, HBZ

Problem: THE DOOR TO THE OUTSIDE OF THE ELECTRICAL MEP ROOM DOES NOT HAVE PANIC RELEASE DOOR HARDWARE INSIDE. THE EXIT SIGNS ABOVE THE TUNNEL WALKWAY STAIRS ROUTE PERSONS INTO THE MEP ROOM. SHOULD THERE BE A QUICK RELEASE DOOR TO THE OUTSIDE FROM THE MEP ROOM TO ROUTE PERSONS OUTSIDE?

Possible rework or extra work involved with this RFI? N (Y)
Delays in project execution involved with this RFI? (N) Y
Estimate of time spent evaluating, finding alternate solution to RFI? Engineering: Hrs Surveying Crew: Hrs Other: Hrs

Proposed Solution by Construction Manager: WDL Date: 8 MAR 99 Authorized By: [signature]
INSTALL PANIC RELEASE HARDWARE ON INSIDE OF DOOR

RECEIVED MAR 18 1999 Brown & Root, Inc.

Response by Designer or other Organization:
FAX → HDR (DETERMINATION)
CC → B+R (INPUT)
INSTALL PANIC RELEASE HARDWARE.
PLEASE PROVIDE B+R A SPECIFICATION ON HARDWARE. - WDL

REQUEST FOR INFORMATION
ADDISON AIRPORT TUNNEL - PROJECT (DNT-260) — 927

RFI No.: B&R 927
Contractor / Subcontractor : H.B. Zachry / ZACHRY-MONTEREY
Date: 11 MAR 99
Originator: W. LEECH
Subject: ELECTRICAL PLAN QUANTITIES
Reply Req'd By: 25 MAR 99
Drw/Spec. No.: E-153 THRU E-166A, C-18, C-25, S-66, S-67, S-68, T-129, T-130, AND BASE BID
Distribution List: B+R MAIN OFC

Problem:
+ ZACHRY-MONTEREY, H.B. ZACHRY'S ELECTRICAL SUBCONTRACTOR, BELIEVES THERE MAY BE OVERRUNS IN THE PLAN QUANTITIES FOR BID ITEMS 618 (BASE BID SHEETS 9 AND 10) AND BID ITEMS 8100 SERIES (BASE BID SHEETS 18 THRU 22). SEE MARKED BID ITEMS ON BASE BID THAT MAY HAVE QUANTITY OVERRUNS.
+ PLEASE PROVIDE BROWN + ROOT THE MATERIALS TAKE-OFF CALCULATIONS TO DETERMINE THESE BID QUANTITIES.

Possible rework or extra work involved with this RFI? (N) Y
Delays in project execution involved with this RFI? N (Y)
Estimate of time spent evaluating, finding alternate solution to RFI? N/A Engineering: Hrs Surveying Crew: Hrs Other: Hrs

Proposed Solution by Construction Manager: W. LEECH Date: 11 MAR 99 Authorized By: [signature]
NOT APPLICABLE

Response by Designer or other Organization:
FAX → HDR (PROVIDE INFO)
CC → B+R
OVERRUNS MAY HAVE BEEN CAUSED DUE TO ROUTING SELECTION OF CONDUITS BY THE CONTRACTOR AS WELL AS BY THE ADDITION OF CONDUITS FOR SECURITY/COMM. SYSTEMS BY AGUIRRE ARCHITECTS. RECOMMEND FOR THE CONTRACTOR TO PROVIDE A TAKE-OFF BASED ON AGUIRRE'S DWGS AND COMPARE OUTPUT TO OVERRUNS.
