MIDWAY ROAD IMPROVEMENTS

RIGHT OF WAY MAP

DESIGNED W.K	DRAWN R.G.B.	DATE MARCH, 1981	FILE		
APPROVED H.W.G	CHECKED A.G.F	SCALE 1" = 100'	SHEET 2 OF		

SUMMARY CONSTRUCTION SEQUENCE

(See Special Conditions 22 of Specifications for additional details)

1. Construct Detour A & B.
2. Construct 9'x5' box culvert and Detour C. This will also involve lowering of 16" water main and sanitary sewer relocation.
3. Construct storm sewer system on west side of centerline.
4. Excavate, lime and pave west 34-ft. section of roadway.
5. Switch the traffic to the new paving.
6. Construct the storm sewer system on the east side of centerline.
7. Excavate, lime and pave the east 34-ft. section of roadway.
8. Split the traffic and construct the median and left-turn lanes.
9. Complete remainder of the project as shown.
10. Drainage ditch improvement can commence at any time.

PLAN OF 9'x5' T.H.D. STD. SCNA BOX CULVERT

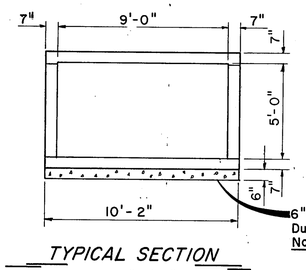
Conc. = 105.02 C.Y. / Remf. = 17,476 Lbs.

Scale : 3/16"= 1'0"

ELEVATION

Scale : 3/16"= 1'0"

Approx. Elev. Top Of 60" City Of Dallas Water Main 608.5. CONTRACOR TO VERIFY DEPTH AT EAST R.O.W. LINE PRIOR TO START OF CULVERT CONSTRUCTION



TYPICAL SECTION

Scale : 1/4"= 1'-0"

Note:

Subgrade material below 6" gravel base must be of a compactible nature. All undesirable material must be removed and replaced by dry embankment material compacted as directed by the Engineer. Cost of subgrade excavation to be considered subsidiary to cost of box culvert. Areas of concern fall within old channel both ends.

ESTIMATED QUANTITIES

Class A Concrete (Box Culvert)	109.1 C.Y.
Reinf. (Box Culvert)	19,016.0 Lbs.
Gravel Base (6")	35.0 C.Y.
Class A Concrete (Wingwalls)	16.1 C.Y.
Reinf. (Wingwalls)	1,810.0 Lbs.

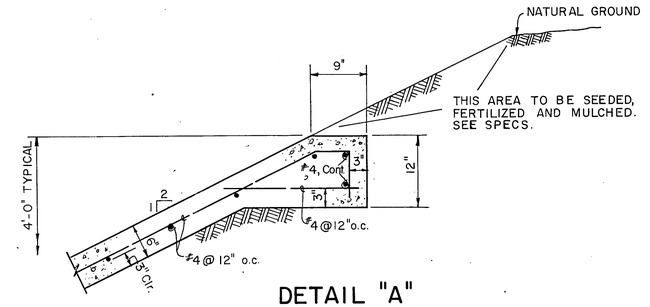
TYPICAL DITCH SECTIONS

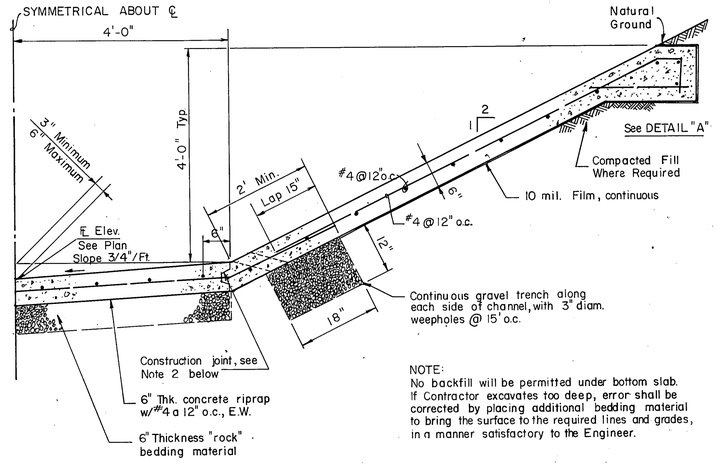
Scale: 1"= 10' Horiz, 1"= 5' Vert.

1. CONCRETE SHALL ATTAIN A MINIMUM COMPESSIVE STRENGTH OF 3000 psi @ 28 DAYS.
2. CONSTRUCTION JOINTS WHERE BOTTOM SLOPE MEETS SIDE SLOPE IS OPTIONAL; MONOLITHIC CONSTRUCTION MAY BE USED.
3. USE A FLOAT FINISH ON BOTTOM AND SLOPED SURFACES (TO BE EXPOSED).
4. ALL REINF. STEEL SHALL BE #4 @ 12" o.c., E.W. UNLESS OTHERWISE NOTED.
5. PROVIDE TRANSVERSE EXPANSION JOINTS AT 80' o.c., TOOLED JOINTS AT 20' o.c.. CONSTRUCTION JOINTS MAY BE USED IN LIEU OF TOOLED JOINTS. JOINTS SHALL EXTEND UP SIDE SLOPES.
6. DESIGNATION OF TYPICAL SECTIONS BY STATIONS IS APPROXIMATE AND MAY BE MODIFIED AS FIELD CONDITIONS DICTATE.



DETAIL "A"

1"= 1'-0"



NOTE:
No backfill will be permitted under bottom slab. If Contractor excavates too deep, error shall be corrected by placing additional bedding material to bring the surface to the required lines and grades, in a manner satisfactory to the Engineer.

NOTE

1. Sanitary sewer shall be kept clear of broken concrete, dirt, or any other debris resulting from construction operations.
2. Pipe to be extended or replaced will be of the same type as the existing unless alternate type is approved by the Engineer.
3. Castings, covers or any other material parts which may be damaged or lost by the contractor's operations will be replaced at the contractor's expense with City standard appurtenances.
4. The adjusted facilities must be clean, fully operational and equal in quality with new construction at the time of final inspection of the project.

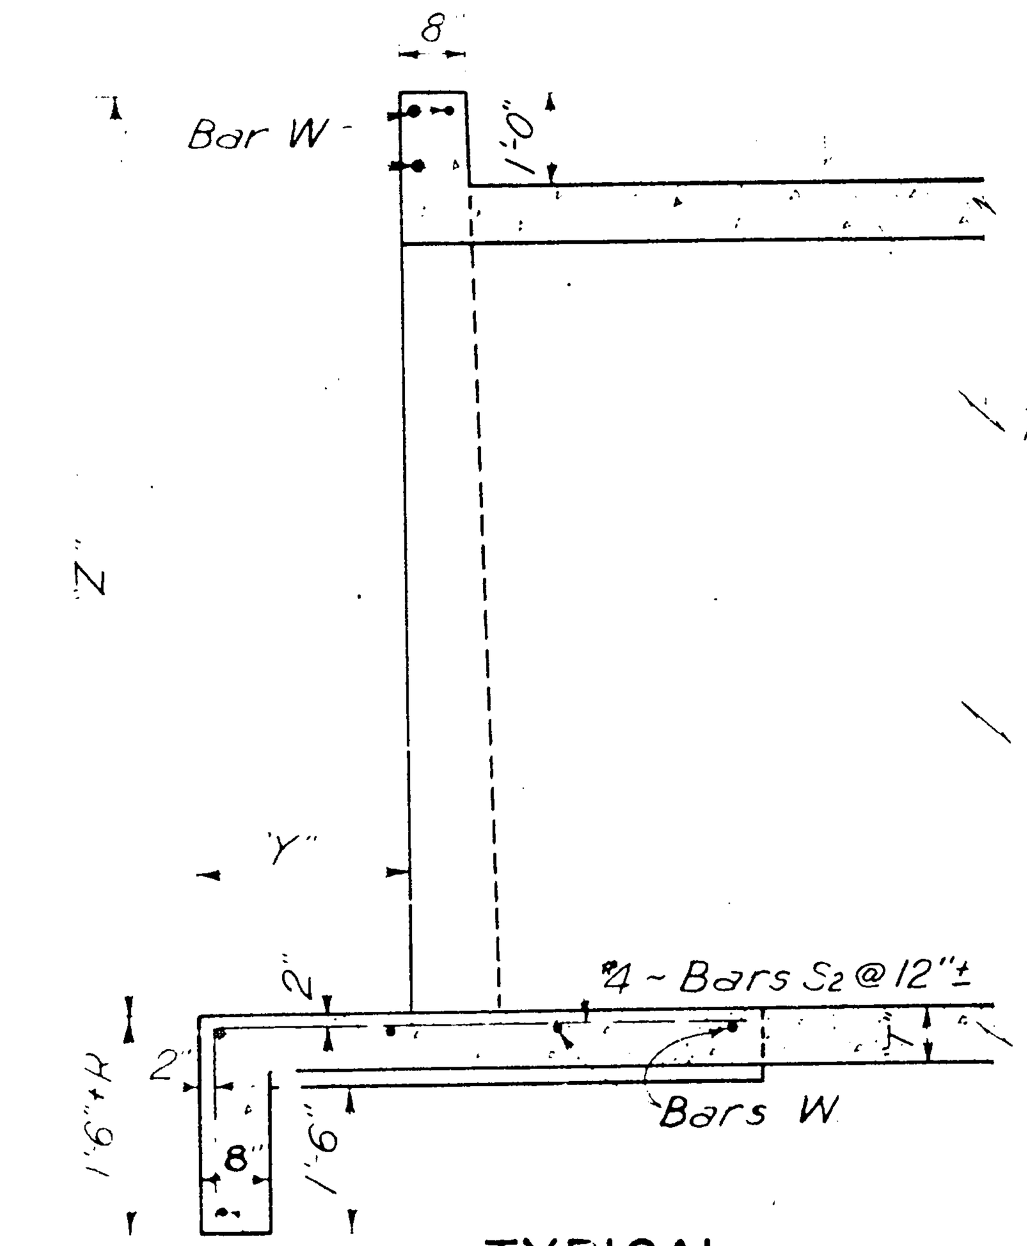
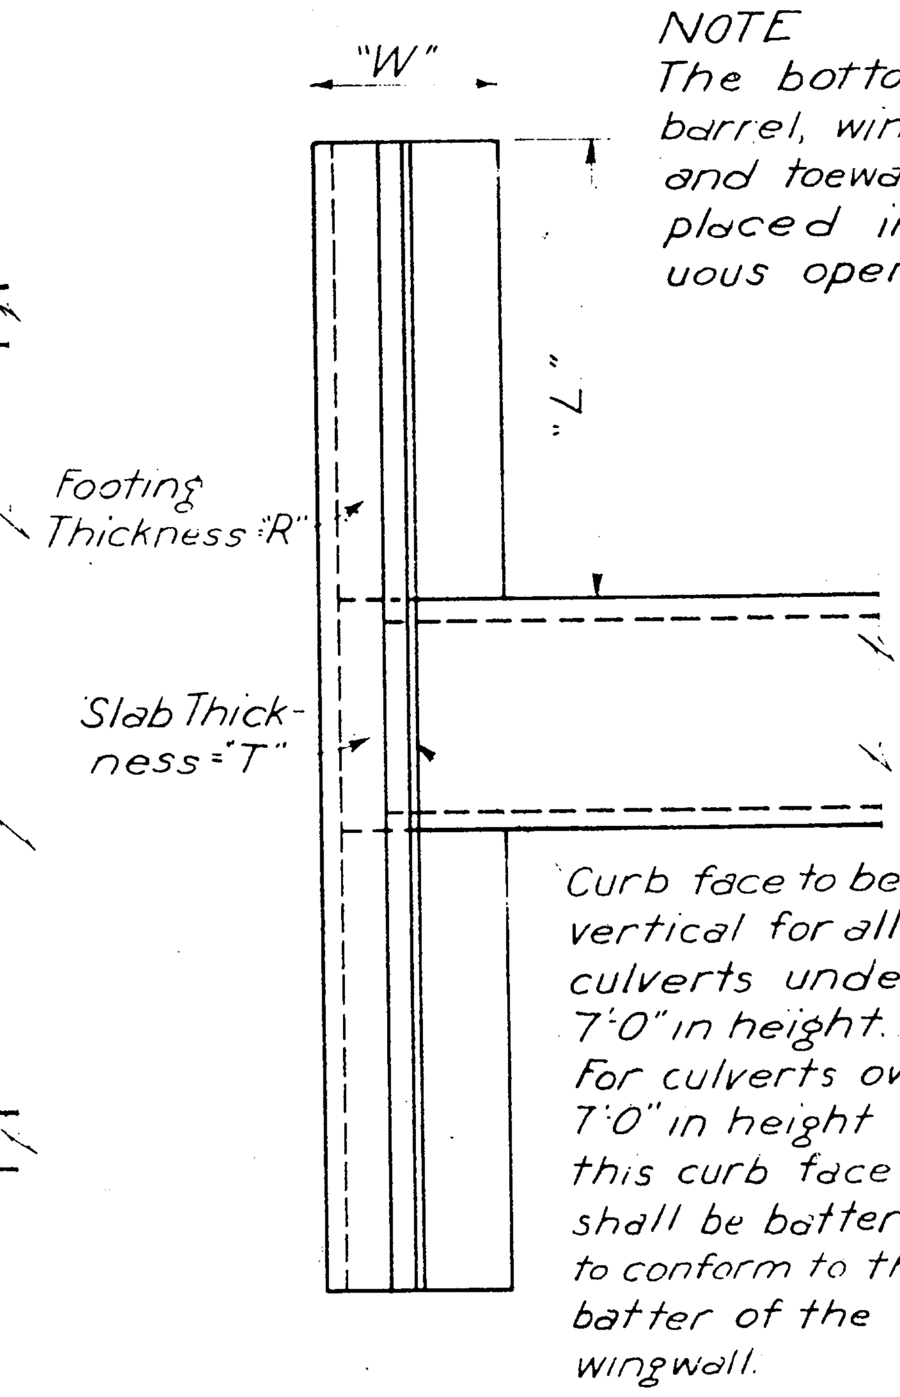
NOTE
The bottom slab of the barrel, wing footings and toewalls shall be placed in one continuous operation.

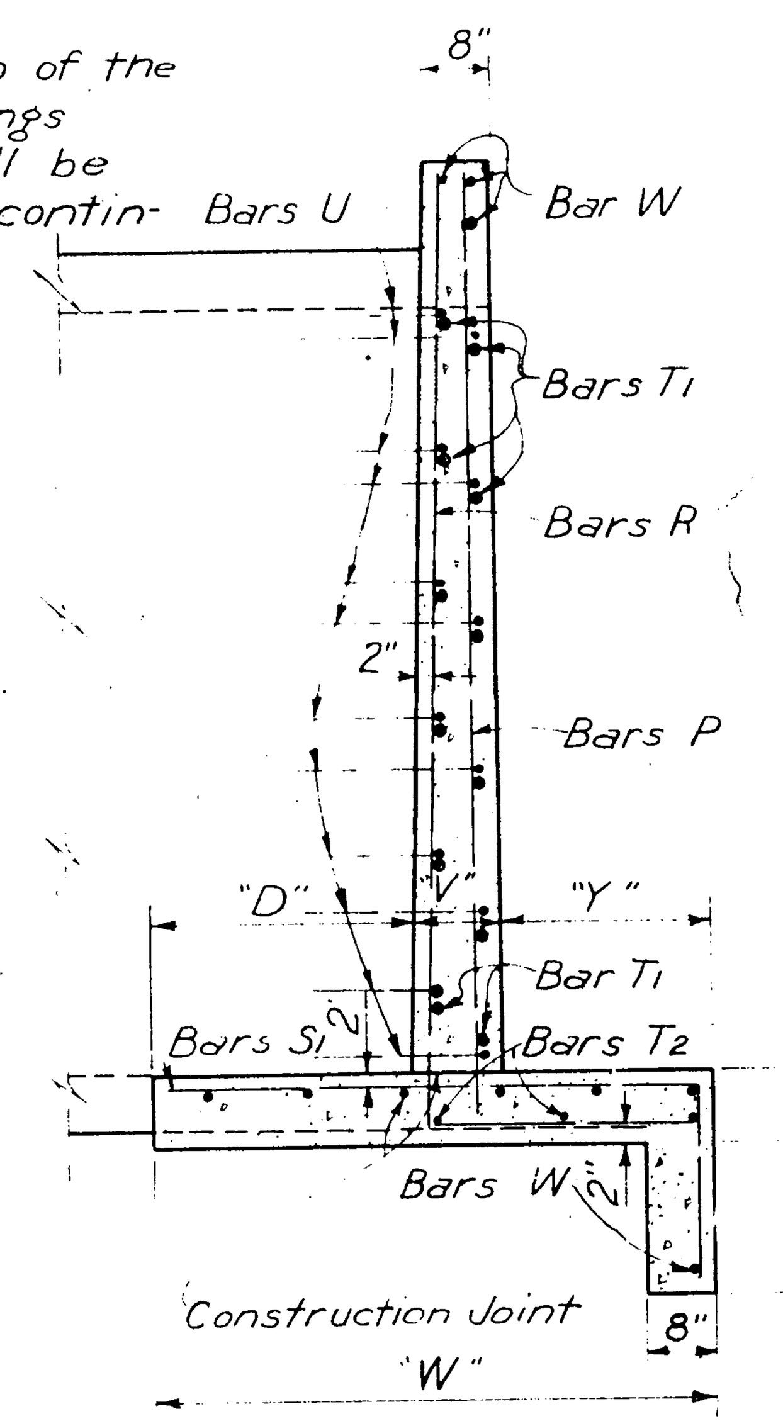


TYPICAL LONGITUDINAL SECTION THRU BOX SHOWING DETAIL OF APRON



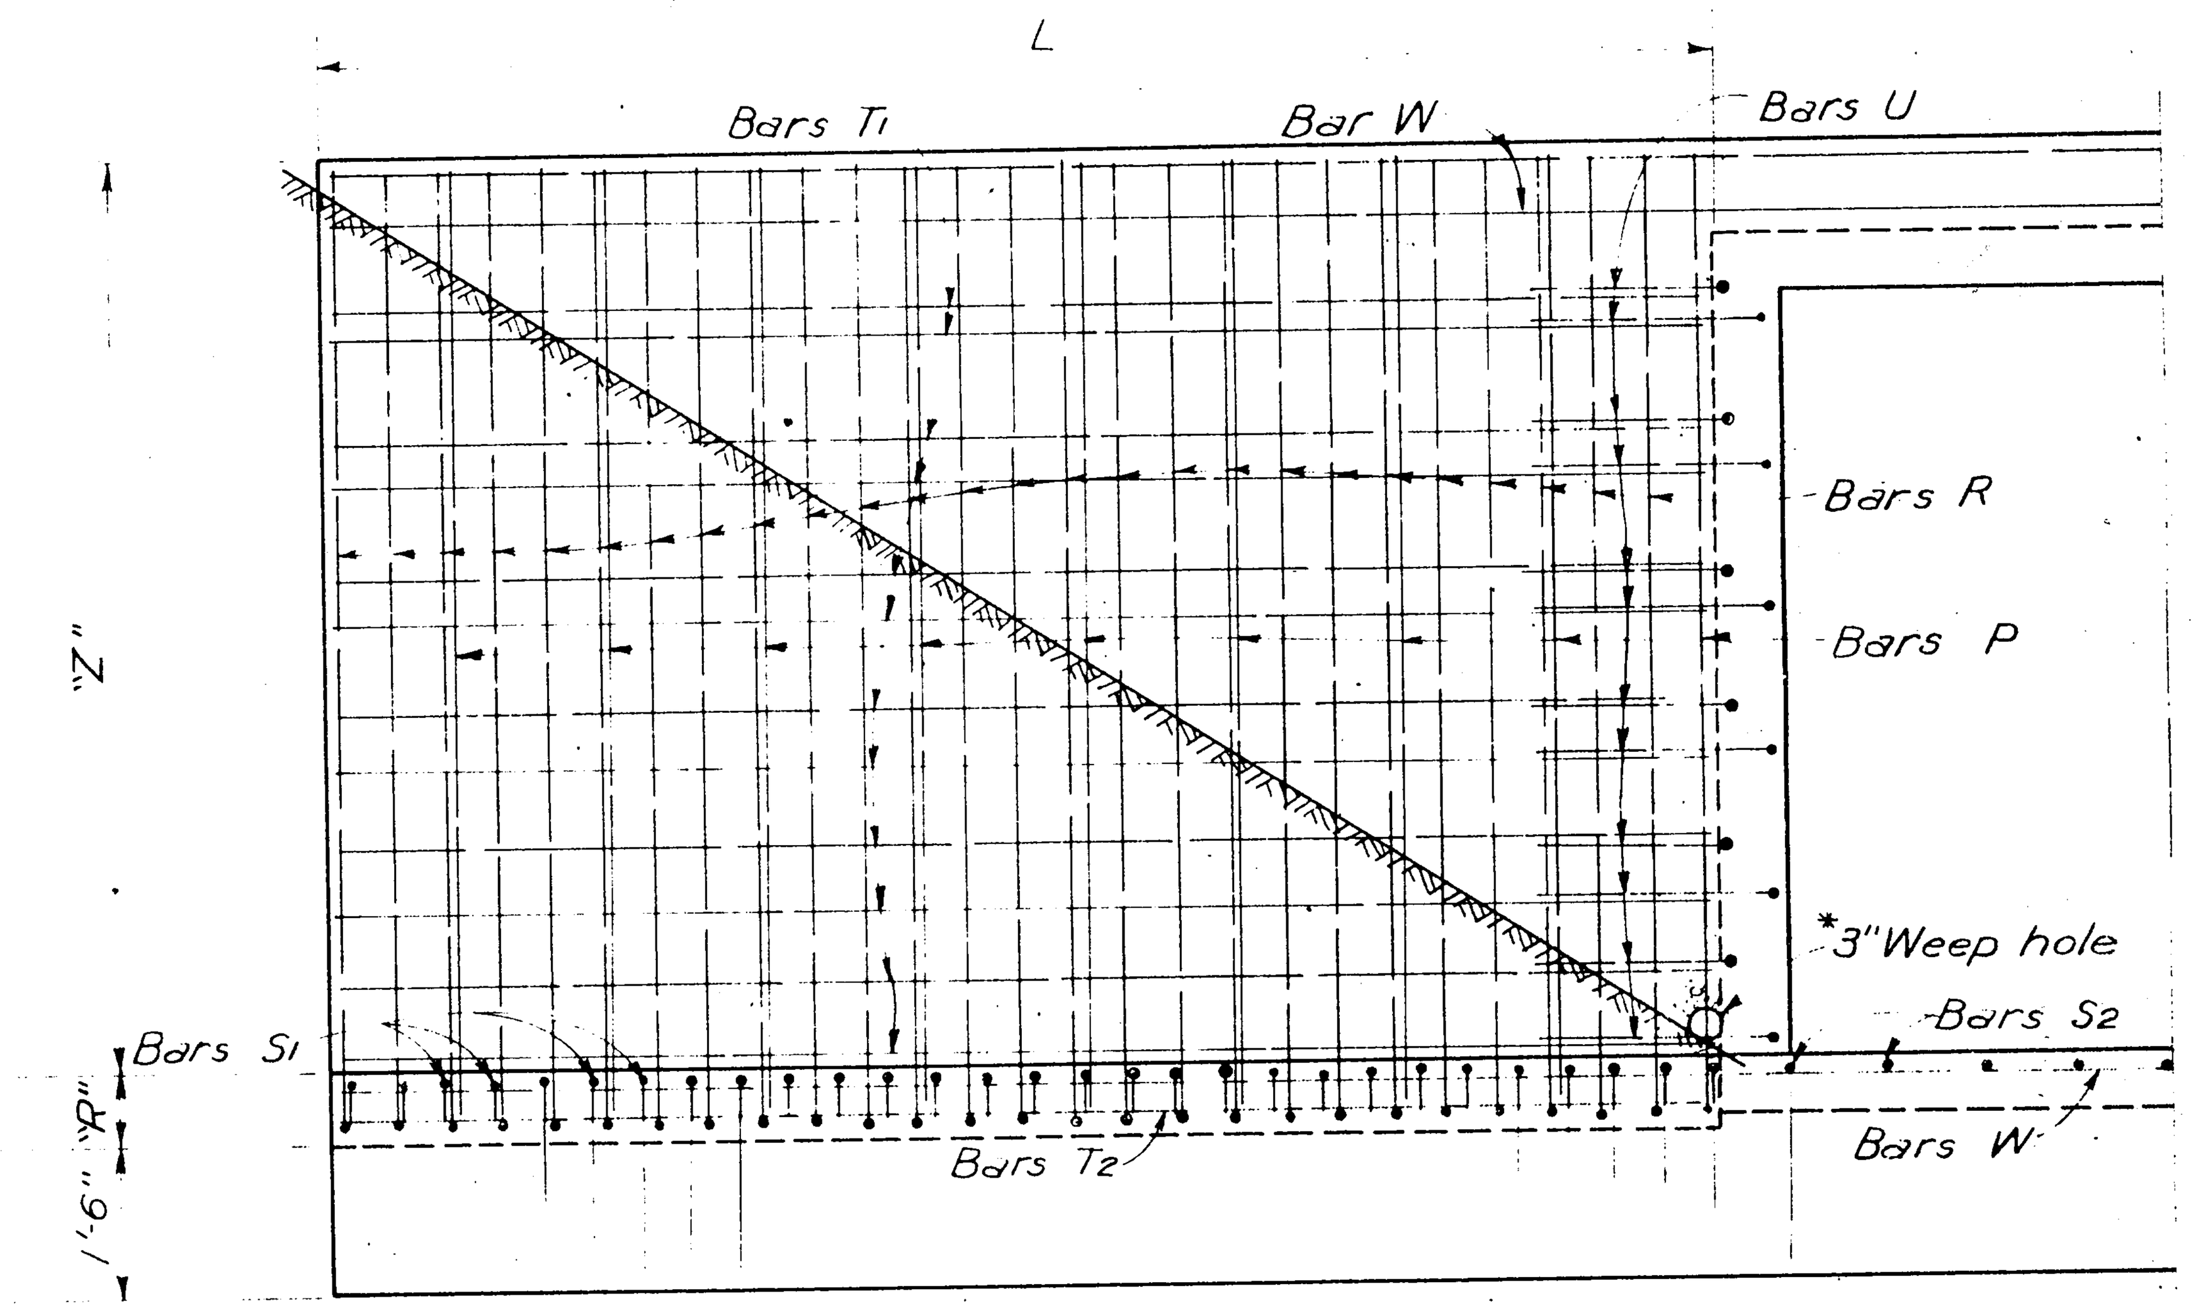
Curb face to be vertical for all culverts under 7'-0" in height. For culverts over 7'-0" in height this curb face shall be battered to conform to the batter of the wingwall.

PLAN VIEW OF WING WALL



SECTION

DETAIL OF WING WALL



HALF ELEVATION

*Place one weep hole per wing at approximate earth line as shown. Fill around inlet of drains with broken stone or coarse gravel to permit free passage of water. Weep holes required for Z = 6'-6" and greater.

GENERAL NOTES
All concrete shall be Class C. Chamfer all exposed corners ¾" unless specified otherwise.
All dimensions relating to reinforcing steel are to centers of bars.

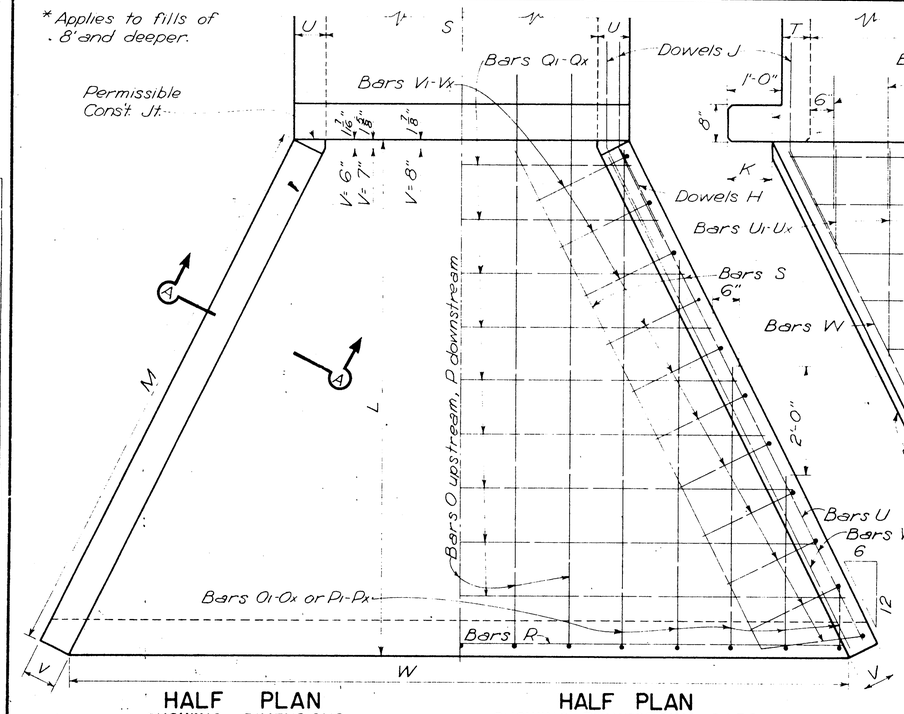
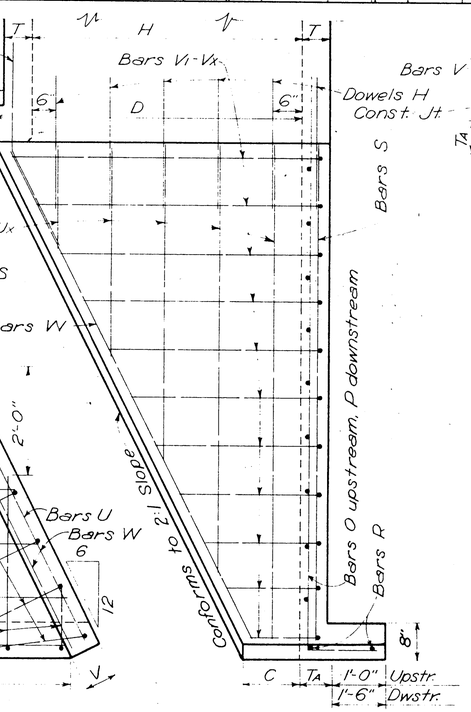
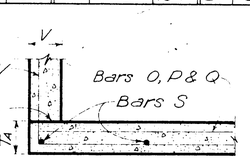
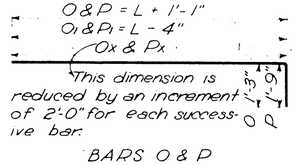
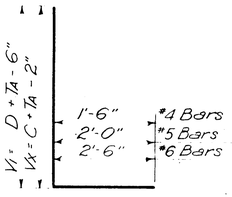
* Applies to fills of 8' and deeper.

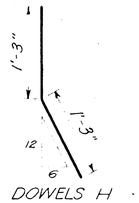


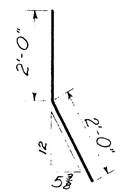












GENERAL NOTES:

All concrete shall be Class C.

Dimensions relating to reinforcing steel are to centers of bars.

Steel cover to be 2" from center of outside layer of steel to face of concrete.

Chamfer exposed corners ¾" except as otherwise noted.

M & N Bars @ Spacing Shown for End. Sec.

*Bars A in top Slab only

Bars M & N replace Bars C & D when shown.
Bars F6, F7, F16 & F17 are not used in bottom slab when Bars M & N are used. When only 1-Bar E is shown it shall be placed in wall at end of barrel.

F BARS IN ANGLE SEC.

GENERAL NOTES:
This Design is adopted from Texas Highway Department Standard for Lengthening Details Single Box Culverts SCL. Refer to this Standard for details not shown on this sheet.
Chamfer exposed corners ¾".
Refer to Standard SCL for straight sections of culvert.
All dimensions relating to reinforcing steel are to centers of bars.
