• Comments: JIM: We are taking a last look at the various cities' candidate projects for the MCIP program. We have used your cost estimates to this point. We will appreciate it if you will examine the 4 attached Project Recap. sheets and fill in the missing values; for SUE, Inflation, Materials Testing, etc. . The values shown came from your submission. We are trying to wrap up in the next few days so we can proceed with the entire program. Your help is appreciated. Please call if there are questions.

MCIP Project Cost Estimates

MCIP Project Cost Estimation M...

Good Day All!

During our 2001 MCIP kick-off meeting earlier this year, we projected that the final selection of projects will take place on or around October 31st. However, due to some discrepancies between the project cost estimates you submitted and those that our staff came up with, we have decided to move that date to December 30th while we attempt to resolve these discrepancies.

lease find attached our project cost estimate methodology. We will be faxing out to you detailed cost estimate break-downs for each individual project by the end of the work day today. Please contact our Senior Design Engineer, Jack Hedge (214-653-6420), as soon as possible if you wish to set up a meeting to discuss these new estimates. If we do not hear from you by November 15, 2001, we'll proceed to use the new estimates in our final project evaluation and selection.

Thanks in advance for cooperation!

Edith B. Ngwa, Ph.D Senior Transportation Planner Dallas County Public Works 411 Elm Street, Suite # 400 Dallas, TX 75202

214-653-7/5/

3-6-02 Selections not made yet - commissioners are still trying to decide, Maybe by the end of March.

#### Dallas County MCIP Project Cost Estimation Methodology

| Pavement and Drainage <sup>1</sup> + Bridge <sup>2</sup> + Traffic Signals <sup>3</sup> + Street Lighting <sup>4</sup> + RR Crossing <sup>5</sup> = Subtotal (ST1) + Inflation (3%/yr ST1 for 6yrs) + Materials (2% ST1) = Construction Cost Total + Design cost <sup>6</sup> + ROW cost + SUE and Utility costs <sup>7</sup> = Subtotal (ST2) + Project Delivery cost(10% ST2) |  |
|---|--|
| = Total Project Cost  |  |

0 - 1 million =11% of construction cost 1 - 5 million = 9.5% of construction cost

\$5 - 25 million = 7% of construction cost

Includes pavement, subgrade, and storm drainage improvements. Bike lanes (two 5ft lanes), sidewalks, and handicap ramps are added if requested on application.

<sup>&</sup>lt;sup>2</sup> Bridge cost estimate is \$50/sq.ft.

<sup>&</sup>lt;sup>3</sup> Traffic Signal roadway reconfiguration is \$110,000 for a 6x6 lane intersection; \$99,000 for a 6x4 lane intersection; \$88,000 for a 6x2 lanc intersection. Estimates are for NEW traffic signals.

<sup>&</sup>lt;sup>4</sup> Street Lighting is \$3,520 per light per 200ft.

<sup>&</sup>lt;sup>5</sup> Railroad crossing is \$161,100 for a 4 lane divided roadway (15ft median); and \$246,300 for a 6 lane divided roadway (50ft median)

<sup>6</sup> Design cost:

<sup>&</sup>lt;sup>7</sup> SUE is @ 0 - 2% of construction cost, depending on the number of utilities. Utility cost as stated on application is added

#### Jim Pierce

From: Sent: Edith Ngwa [ENgwa@dallascounty.org] Thursday, August 09, 2001 3:06 PM

To:

Jpierce@ci.addison.tx.us

Subject:

Speed rating for intersection projects

#### Jim:

Last year to correct the problem of intersection projects scoring no points under the Speed Delay Rating, we had agreed to use the posted and operational speeds for the intersecting road with the higher speed. After talking to you, I went back to our MCIP application and realized that we had not edited the data entry space for operational and posted speeds as we were supposed to, to reflect this change. Which explains why you didn't provide this information. I'll appreciate it if you'll submit the posted and operational speeds for both the Beltline@Dallas Pkwy and the Dallas Pkwy@ Arapaho projects so we can determine the Speed Delay Rating for these projects.

#### Thanks!

Edith Ngwa Senior Transportation Planner Dallas County Public Works

July 31, 2001

TO:

**Dallas County Cities** 

FROM:

Don Cranford

Assistant Director, Dallas County Public Works Department

RE:

Major Capital Improvement Program: Preliminary Evaluation Results

The Dallas County Public Works Department has completed a preliminary evaluation of all projects submitted under the 2001 Major Capital Improvement Program (MCIP). Please find attached, the evaluation results for the projects submitted by your city. As the results indicate, projects were scored on 10 technical criteria, a local cost participation multiplier, and 3 special case scenarios as outlined in our evaluation methodology paper: "Evaluation Methodology to Score and Rank Candidate Thoroughfare System Improvements." This paper was presented during our 2001 MCIP Kick-Off meeting held at the Dallas County Commissioners Courtroom on January 31, 2001, and is available, upon request, for your review. For quick reference, the evaluation criteria as abbreviated on the attached table are as follows:

FC:

Functional Classification Rating

SD:

Speed Delay Rating

TV:

Traffic Volume Rating

TVG:

Traffic Volume Growth Rating

TD:

Travel Desire Rating

BC:

Benefit Cost Ratio Rating

AR:

Accident Rating

AQ:

Air Quality/ Energy Conservation Rating

IMSM:

Intermodal / Multimodal / Social Mobility Rating

SDR:

Sustainable Development / Redevelopment / Smart Growth Rating

MULT:

Local Cost Participation Multiplier

Sc1:

Special Case # 1

Sc2:

Special Case # 2

Sc3:

Special Case #3

All ten criteria carried equal weight (10pts) in our evaluation. Please note that if a project scored no points for a given criteria, one of the following three scenarios is possible:

1) the project did not qualify for points (for example, proposed new roads do not qualify for accident rating points); or

- 2) the data necessary for determining a score was not made available to us (for example, projects for which we received no accident, posted and operational speed data, scored zero points for accident and speed delay ratings as appropriate): or,
- 3) the project simply recorded no benefit for the criteria in question.

We strongly encourage you to review these results carefully and contact Edith Ngwa, Ph.D, Senior Transportation Planner, if you would like further clarification on the scoring and evaluation methodology, or would like to provide data you omitted in the original project application.

The deadline for responding to this request is **August 16, 2001**. If we do not hear from you by this deadline, we will assume you agree with our assessment of your project(s) and proceed to use this information for our final evaluation and ranking of all projects by August 30, 2001. These final evaluation results would be presented in a similar format as the preliminary results with the exception of the addition of adjusted (for inflation and contingencies) project cost estimates.

Thank You.

Sincerely,

Don Cranford

FROM:

Don Cranford

Assistant Director, Dallas County Public Works Department

RE:

Major Capital Improvement Program: Preliminary Evaluation Results

The Dallas County Public Works Department has completed a preliminary evaluation of all projects submitted under the 2001 Major Capital Improvement Program (MCIP). Please find attached, the evaluation results for the projects submitted by your city. As the results indicate, projects were scored on 10 technical criteria, a local cost participation multiplier, and 3 special case scenarios as outlined in our evaluation methodology paper: "Evaluation Methodology to Score and Rank Candidate Thoroughfare System Improvements." This paper was presented during our 2001 MCIP Kick-Off meeting held at the Dallas County Commissioners Courtroom on January 31, 2001, and is available, upon request, for your review. For quick reference, the evaluation criteria as abbreviated on the attached table are as follows:

FC:

Functional Classification Rating

SD:

Speed Delay Rating Traffic Volume Rating

TV: TVG:

Traffic Volume Growth Rating

TD:

Travel Desire Rating

BC:

Benefit Cost Ratio Rating

AR:

Accident Rating

AQ:

Air Quality/ Energy Conservation Rating

TMSM:

Intermodal / Multimodal / Social Mobility Rating

SDR:

Sustainable Development / Redevelopment / Smart Growth Rating

MULT:

Local Cost Participation Multiplier

Sc1:

Special Case # 1

Sc2:

Special Case # 2

Sc3:

Special Case # 3

All ten criteria carried equal weight (10pts) in our evaluation. Please note that if a project scored no points for a given criteria, one of the following three scenarios is possible:

1) the project did not qualify for points (for example, proposed new roads do not qualify for accident rating points); or

- 2) the data necessary for determining a score was not made available to us (for example, projects for which we received no accident, posted and operational speed data, scored zero points for accident and speed delay ratings as appropriate): or,
- 3) the project simply recorded no benefit for the criteria in question.

We strongly encourage you to review these results carefully and contact Edith Ngwa, Ph.D, Senior Transportation Planner, if you would like further clarification on the scoring and evaluation methodology, or would like to provide data you omitted in the original project application.

The deadline for responding to this request is August 16, 2001. If we do not hear from you by this deadline, we will assume you agree with our assessment of your project(s) and proceed to use this information for our final evaluation and ranking of all projects by August 30, 2001. These final evaluation results would be presented in a similar format as the preliminary results with the exception of the addition of adjusted (for inflation and contingencies) project cost estimates.

Thank You.

Sincerely, Don Cranford

#### PUBLIC WORKS DEPARTMENT

(972) 450-2871

Post Office Box 9010 Addison, Texas 75001-9010

16801 Westgrove

April 25, 2001

Mr. Donald L Holzwarth, P.E. Dallas County Director of Public Works 411 Elm Street, 4<sup>th</sup> Floor Dallas, TX 75202

Re: 2001 Call For Projects

Dear Mr. Holzwarth:

The Town of Addison is pleased to submit the following Application Information for five projects, in response to your 2001 Call For Projects.

Belt Line Road/Dallas Parkway Single Point Urban Interchange

Southbound to Northbound U-turn on Dallas Parkway at Arapaho Road

Keller Springs/Addison Road Intersection

Signals Upgrade and Re-timing, Belt Line Rd. from Quorum Dr. to Marsh Lane

The Town Council passed a resolution authorizing filing the applications at their meeting on April 25, 2001. A copy of the resolution will be forwarded as soon as it is signed by the Mayor.

We appreciate the opportunity to submit these applications. If you have any questions, please contact Jim Pierce, P.E., Assistant City Engineer at 972-450-2879.

Very truly yours,

Michael E. Murphy, P.E.

Acting Director of Public Works

Cc: Chris Terry, Assistant City Manager

Jim Pierce, P.E., Assistant City Engineer

April 12, 2001

#### **MEMORANDUM**

To: Chris Terry, Assistant City Manager

Through: Michael Murphy, P.E., Acting Director of Public Works

From: Jim Pierce, P.E., Assistant City Engineer

Subject: 2001 Dallas County Call For Projects

Dallas County Public Works is soliciting nominations from cities for projects to be funded through the Dallas County Major Capital Improvement Fund Thoroughfare Program. In lieu of a traditional bond program, Dallas County has created the Major Capital Improvement Fund, a "pay-as-you-go" funding mechanism for financing infrastructure improvements. The County anticipates an annual call for projects.

Under this new funding mechanism, approximately \$15 million dollars will be available in both FY 2004 and 2005, with \$20 million being available annually in FY 2006 and beyond. The County is currently seeking nominations for projects to be funded for construction in FY 2005. \$3.75 million will be available for funding in our District in 2005. Applications are due at Dallas County for this call on April 27, 2001.

Each project's score is multiplied by a factor that gives credit to local cost participation. For example, if an applicant pledges a local match of 50%, the multiplier is 1.50. An 80% local match gives the project the highest multiplier possible.

The Town was successful in receiving grants for two projects last year – Belt Line Road/Dallas Parkway Single Point Urban Interchange (SPUI), and Signals Upgrade and Re-Timing, Midway Road from Spring Valley to Dooley Road.

Staff has selected four projects to be submitted to the County under this program this year. Three of the four projects were submitted last year and are being resubmitted this year. The new project being submitted this year is the Keller Springs/Addison Road Intersection. All projects are being submitted with an 80% local share as follows:

Belt Line Road/Dallas Parkway Single Point Urban Interchange
Town Share - \$2,000,000 County Share - \$500,000
Southbound to Northbound U-turn on Dallas Parkway at Arapaho Road
Town Share - \$600,000 County Share - \$150,000
Signals Upgrade and Re-timing, Belt Line Rd. from Quorum Dr. to Marsh Lane
Town Share - \$560,000 County Share - \$140,000
Keller Springs/Addison Road Intersection
Town Share - \$198,400 County Share - \$49,600

Staff recommends Council authorize the City Manager to submit applications for the projects listed above to Dallas County for their 2001 Call for Projects.

SWE Park-4 PROJECT COST INFORMATION

Total Project Cost: \$248,000 Right-of-way Cost: \$ 72,000 Engineering/Design Cost: \$ 3,000

**Utility Cost:** 

\$ 173,000 **Construction Cost:** 

**Local Cost Contribution:** 

80% in percent of total cost:

#### Supporting Comments Regarding Cost:

{Use this section to justify project cost estimate.} This project was bid in late 1999 but was never awarded because of lack of Right- of-way. The total amount bid was \$147,560. The bid price has been adjusted upward by 6% for inflation, and 5% has been added to that for contingencies. Engineering Costs are for rebidding the project and bid phase services. Right-of way cost figured at \$8.00/square foot for 9000 Square feet.

Subject: 2001 Dallas Co. Call for Projects

#### Mr Pierce:

Is the Town of Addison planning to resubmit the BeltLine Road/ Dallas Parkway Intersection project for this year's MCIP program. I wanted to remind you that projects not selected in a previous year can be resubmitted for funding. I read the article about the project on the March 30th issue of the Dallas Morning news and wanted to remind you of this possibility.

#### Thanks.

Subject: Re: Dallas County 2001 Call for Projects

#### Mr. Pierce:

The County is looking at a total of \$20 Million. Although this amount is a significant increase from last year's \$15million, it is still considerably small when divied up equally (\$5million each) amongst all 4 districts. The funds will be available as the project progresses through the phases starting from 2002/03 when funding for the design phase becomes available.

I hope I adequately answered your questions. If you have additional questions, do not hesitate to call me.

#### Thanks!

Edith B. Ngwa, Ph.D Senior Transportation Planner Dallas County Public Works 411 Elm Street, Ste 400 Dallas, TX 75202 (214) 653-6522

>>> >>> <jpierce@ci.addison.tx.us> 04/06 1:19 PM >>>
Edith: Several questions:

- 1. When will funds be available for the projects approved in this call?
  - 2. What amount will be available county wide?
  - 3. How much money will be available in District 1?

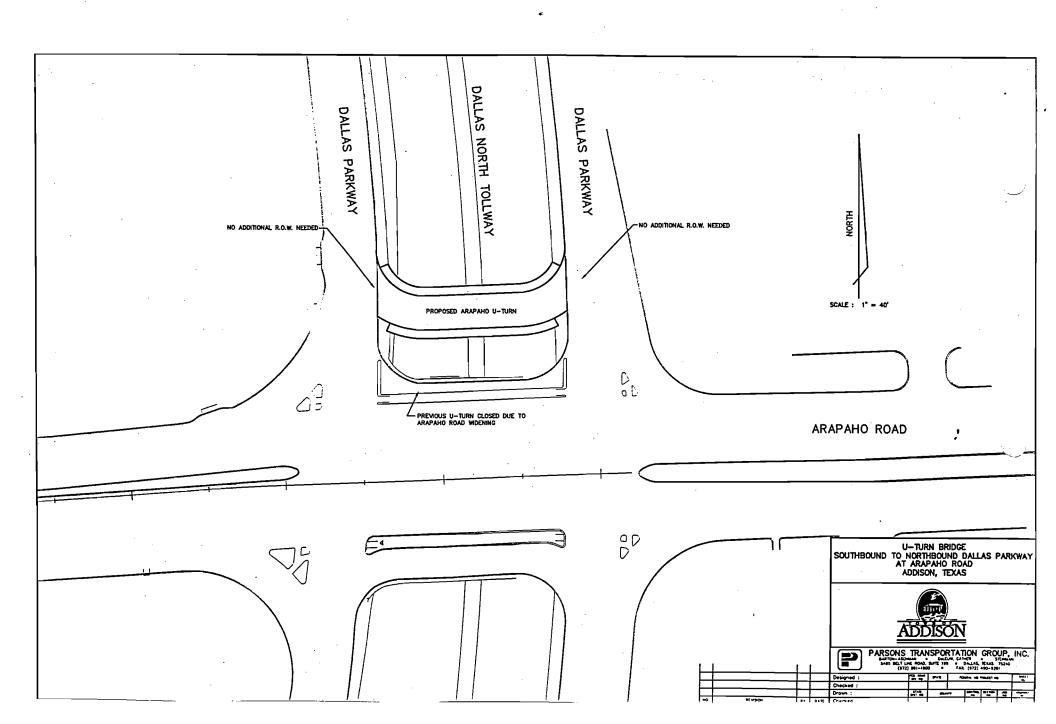

#### Thanks,

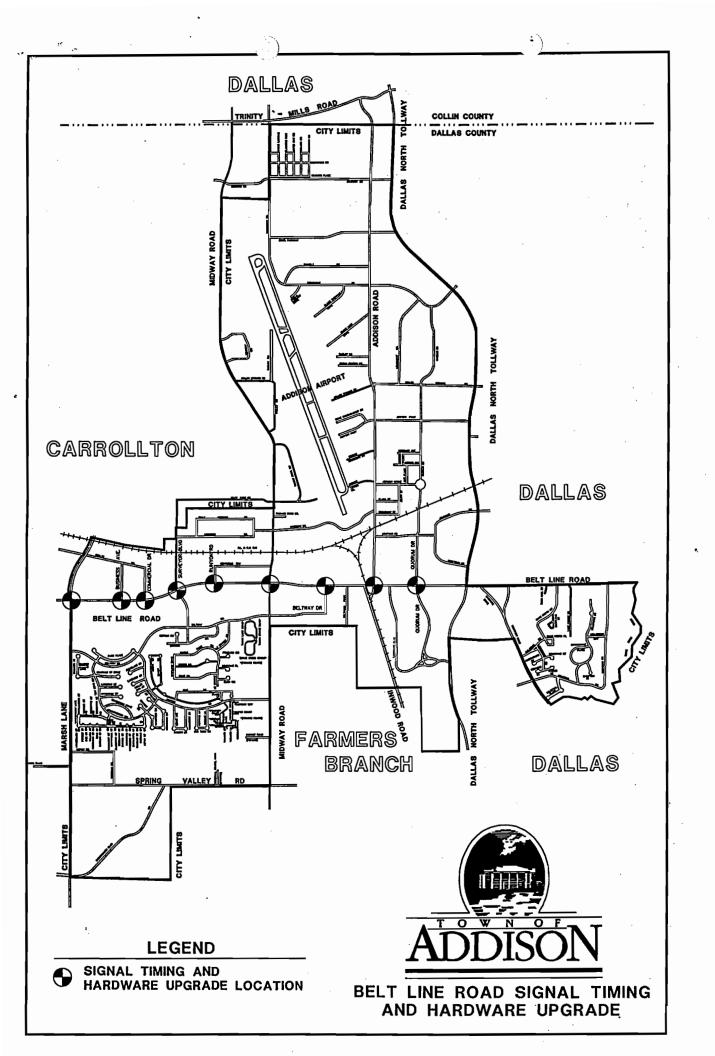

Jim Pierce, P.E. Assistant Public Works Director PO Box 9010 Addison, TX 75001-9010 972-450-2879 Arepahr-Accident 3-13-00

## February 15, 2000

#### **MEMORANDUM**

To:

Chris Terry, Assistant City Manager

Through:

Michael Murphy, P.E., Acting Director of Public Works

From:

Jim Pierce, P.E., Assistant City Engineer

Subject:

2000 Dallas County Call For Projects

Dallas County Public Works is soliciting nominations from cities for projects to be funded through the Dallas County Major Capital Improvement Fund Thoroughfare Program. In lieu of a traditional bond program, Dallas County has created the Major Capital Improvement Fund, a "pay-as-you-go" funding mechanism for financing infrastructure improvements. The County anticipates an annual call for projects.

Under this new funding mechanism, approximately \$15 million dollars will be available in both FY 2004 and 2005, with \$20 million being available annually in FY 2006 and beyond. The County is currently seeking nominations for projects to be funded for construction in FY 2004. \$3.75 million will be available for funding in our District in 2004. Applications are due at Dallas County for this call on March 13, 2000.

The County will evaluate the projects submitted using complicated formulas to assign points in the following categories:

Roadway Functional Classification Rating (10 points)

Speed Delay Rating (10 points)

Traffic Volume Rating (10 points)

Traffic Volume Growth Rating (10 points)

Travel Desire Rating (10 points)

Benefit-Cost Ratio (10 points)

Accident Rate Rating (10 points)

Air Quality/Energy Conservation Rating (10 points)

Sustainable Development/Redevelopment/"Smart Growth" Rating (10 points)

Intermodal/Multimodal/Social Mobility Rating (10 points)

Each project's score is multiplied by a factor that gives credit to local cost participation. For example, if an applicant pledges a local match of 50%, the multiplier is 1.50.

Staff has selected five projects to be submitted to the County under this program (with % local share and cost distribution shown):

Belt Line Road/Dallas Parkway Single Point Urban Interchange (75%)
Town Share - \$1,875,000 County Share - \$625,000
Southbound to Northbound U-turn on Dallas Parkway at Arapaho Road (75%)
Town Share - \$562,500 County Share - \$187,500
Arapaho Road, Phase III, Surveyor Boulevard to Addison Road (90%)
Town Share - \$12,895,300 County Share - \$1,432,800

Signals Upgrade and Re-timing, Belt Line Rd. from Quorum Dr. to Marsh Lane (50%)

Town Share - \$350,000 County Share - \$350,000 Signals Upgrade and Re-timing, Midway Rd. from Spring Valley to Dooley Rd (50%) Town Share - \$196,000 County Share - \$196,000

Draft copies of the 2000 Dallas County Call For Projects Applications are attached. They will be finalized once accident data is received from the City Of Dallas Police Department for the Belt

Staff recommends Council authorize the City Manager to submit applications for the projects listed above to Dallas County for their 2000 Call for Projects.

Line Road and Arapaho Road intersections with Dallas Parkway. (These intersections are in the

City Of Dallas).

# A QUICK GUIDE TO THE CAPACITY ANALYSIS WORKSHEET, VERSIONS 3.2 AND 4.0

### WHAT'S NEW IN VERSION 3.2

1. New signal penalty equation. The signal penalty equation used in all versions including 3.1 was a simple linear approximation of the signal tables used in a 1988 Florida DOT methodology for determining Level of Service, as well as other studies pertaining to signals and capacity. In Version 3.2, the linear equation is abandoned for a series a ranges the same as the ranges of each of the Florida DOT tables. Thus, the new methodology is a much closer approximation of the Florida tables.

It should be noted that the linear penalty, 4.5% of capacity per signal per mile, tended to underpenalize low signal frequency facilities and overpenalize high signal frequency facilities. The methodology employed in Version 4.0 corrects this deficiency.

2. All other aspects of Version 3.2 are fundamentally the same as Version 3.1.

### WHAT'S NEW IN VERSION 4.0

1. New signal penalty equation. The signal penalty equation used in all versions including 3.1 was a simple linear approximation of the signal tables used in a 1988 Florida DOT methodology for determining Level of Service, as well as other studies pertaining to signals and capacity. In Version 4.0, the linear equation is abandoned for a series a ranges the same as the ranges of each of the Florida DOT tables. Thus, the new methodology is a much closer approximation of the Florida tables.

It should be noted that the linear penalty, 4.5% of capacity per signal per mile, tended to underpenalize low signal frequency facilities and overpenalize high signal frequency facilities. The methodology employed in Version 4.0 corrects this deficiency.

- 2. Elimination of inverse ratings. In all versions prior to 4.0, the ratings provided for V/C, Accidents, and Total Quality, were inverse ratings, that is, the lower the rating, the better. In 4.0, ratings are direct, meaning that the higher the rating, the better the performance.
- 3. Elimination of ratings indexes. In 4.0, the ratings index letters for all three ratings have been eliminated.
- 4. Change of Total Quality Rating scale. In 4.0, the Total Quality Rating scale has been changed to 0-100.

### SYNOPSIS OF SPREADSHEET METHODOLOGY

This spreadsheet is an amalgamation of several different methodologies to evaluate capacity on a non-freeway facility. Users familiar with the Highway Capacity Manual know that for a particular facility, there are several different ways to evaluate Level of Service, yielding different, but correct results. For example, a multilane facility with signals could be evaluated under the signalized intersection method, the arterial method, or the multilane facility method, depending on the preference of the evaluator, with each method yielding a different value. In some cases, a facility that yields a low LOS using one method may yield a high LOS using a different method. The dilemma, then, is which value to use, as both are "correct." The purpose of this spreadsheet, then, is to attempt to take into account all of the various methods of evaluation in one simple method. It should be noted, however, that, for the sake of simplicity, not every single factor affecting capacity, such as the percentage of heavy vehicles or grades, has been included. However, those that will provide a quick snapshot of the operation of the facility -- signal frequency, presence of medians and left-turn bays, one-way operation, lane width, accident rate, and lateral distance to the nearest obstruction--have.

## DATA ENTRY REQUIREMENTS

- 1. Basic identification. This consists of the facility name and limits, including the length of the corridor in miles.
- 2. Facility type. As this spreadsheet was intended for non-freeway facilities, the user is given the choice of four types of functionally classified non-freeway facilities. NOTE: As capacity on local streets should not be of concern, evaluation of a local street is not given as an option.
  - The values given for each facility type are very general "rule-of-thumb" values assigned to the TRANPLAN models for Springfield, Illinois, and Little Rock, Arkansas.
- 3. Number of lanes. The number of through lanes. Does not include auxiliary lanes such as turn lanes or accel/decel lanes
- 4. Number of signals. The number of signals in the corridor, including signals at the termini if the facility being analyzed would have the right-of-way if the terminal intersection were unsignalized.
- 5. Typical lane width. As the narrowest lane will dictate the capacity of the facility, if the lanes are of varying width, the narrowest width should be used.

- 6. Lateral distance to nearest obstruction. The minimum distance to any obstruction in the corridor, either in the median or on the side, should be used. Note that curbed inlets and non-mountable barrier curbs are obstructions.
- 7. One-way operation. One-way facilities are assigned a 20% bonus.
- 8. Raised median. A YES should be encoded if the facility has a raised median of any width, or a flush median, either paved or turf, at least 10' in width. Note that if the raised median has a non-mountable curb, and that curb is less than 6 feet from the marked driving surface, then the lateral distance penalty applies.
- Left Turn Bay. A marked or delineated left turn storage area. NOTE: Flush paved medians do not, in and of themselves, constitute a left turn bay.

## SPREADSHEET COMPUTATIONS

- Unadjusted capacity. Derived from TRANPLAN models.
   Expressway/Parkway = 8000 vehicles per day per lane (vpdpl)
   Principal Arterial = 7000 vpdpl
   Minor Arterial = 6000 vpdpl
   Collector = 5000 vpdpl
- 2. Peak Hour Volume = 10% of unadjusted capacity. This value is a general "rule of thumb" used by traffic engineers for calculating peak hour volumes.
- 3. Lane width penalty = 5% per foot below 12 feet. This value is a linear approximation of the values given in the Highway Capacity Manual.
- 4. Lateral clearance penalty = 1.67% per foot less than 6 feet. This value is a linear approximation of the values given in the Highway Capacity Manual.
- 5. One-Way Operation. A 20% bonus is given for one-way streets.
- 6. Raised Medians. A 5% penalty is given for facilities without medians.
- 7. Left-turn Bays. a 15% penalty is given for facilities without left turn bays.
- 8. Signal penalty. For Version 3.1 or earlier, a 4.5% penalty is assigned for each signal per mile. For Version 4.0, the penalty is either 0%, 18%, 37%, or 39%, depending on signal frequency.

#### VOLUME/CAPACITY Ratio and Rating

### **ACCIDENT Rate and Rating**

| V/C Ratio=            | 1.440                     | # of Accidents =    | 59.66667 Year = | avg     |
|-----------------------|---------------------------|---------------------|-----------------|---------|
| V/C Quality Rating    | 0                         | Accident Rate       | 9.059 Accidents | per MVM |
| (V.Q.R. = 100 - (V/C) | * 100), to zero sig figs) | Acc. Quality Rating | 91              |         |

(A.Q.R. = 100 - Acc Rate, rounded to zero sig figs)

(Both the V.Q.R. and A.Q.R. have a range from 0 to 100, with 0 the worst rating)

Total Quality Rating = 45 (T.Q.R. = Avg. of the V.Q.R. and A.Q.R., to zero sig figs)

(The T.Q.R. has a range from 0 to 100, with 0 being the worst rating)

Dear Dallas County Partner:

Welcome to the Dallas County Major Capital Improvement Program (MCIP) Application Process. In this diskette / package, you will find four documents and/or forms that will be of use to you as you go through the process of selecting and submitting potential thoroughfare projects for Dallas County Major Capital Improvement funding.

The documents /forms contained in this application file / package are as follows:

- I. Capacity Spreadsheet
- II. Quickcap
- III. RISK ANALYSIS sheet
- IV. MCIP Application

You are NOT required to turn in (I) and (II) above, however, you do need to turn in (III) and (IV).

## FORM(S) YOU ARE NOT REQUIRED TO TURN IN TO DALLAS COUNTY:

- The Capacity Spreadsheet (I.): This spreadsheet is provided as a tool to assist you in determining the overall operational quality of potential projects to be submitted for MCIP funding. It requires that you input raw data (existing traffic volume, project length, number of accidents, etc. etc.) in the appropriate cells of the spreadsheet and the spreadsheet automatically calculates the current operational capacity of the roadway. The operational capacity (Total Quality Rating) is rated on a scale of 0-100. The lower the score (closer to zero), the lower the operational quality of the roadway, and therefore the greater the need for the proposed improvement. We recommend that you use this spreadsheet program as a preliminary evaluation tool to narrow down the potential number of projects you submit for Dallas County funding.
- II) Quickcap (II.) is your instruction guide on how to use the Capacity Spreadsheet (I.).

It is up to you whether you choose to use item (I) above. It is a scientific roadway operational analysis tool that may or may not be needed by your city in deciding which projects are of greater need for improvement and therefore should be submitted for improvement. We will not be collecting any information from (I).

#### FORMS TO BE TURNED IN TO DALLAS COUNTY:

- III) The RISK ANALYSIS sheet (III) and
- IV) The MCIP Application (IV) are the two forms that are required for submittal. The MCIP application (IV) is the actual application form for proposed improvement funding while the risk analysis sheet is a supplement to the application form and a new addition to this year's application process. The latter is a written request for your overall physical assessment (ROW, utilities, and other structural issues) of the project being submitted. These two forms (paper or electronic copy), should be completed and mailed to:

Edith Ngwa, Ph.D Senior Transportation Planner Dallas County 411 Elm Street, 4<sup>th</sup> Floor Dallas, TX 75202

You may also email the application forms to <a href="mailto:engwa@dallascounty.org">engwa@dallascounty.org</a> or fax to 214-653-6416.

## The deadline for application submittal is April 27, 2001 at 4pm.

If you have any questions on the application process, you may contact Edith Ngwa at 214-653-6522 or Isela Rodriguez at 214-653-6417.

We look forward to working with you on Dallas County 2001 MCIP Call for Projects!

SPUI approved)

## 2000 Dallas County Call For Projects

#### APPLICATION INFORMATION

**Submitting Agency:** 

Town of Addison

**Contact Person:** 

Jim Pierce, P.E., Assistant City Engineer

Address:

P.O. Box 9010

Addison

TX

75001-9010

Telephone:

972/450-2879

**Facsimile:** 

972/450-2834

e-mail address:

jpierce@ci.addison.tx.us

#### PROJECT INFORMATION

Location:

**Belt Line Road** 

Beginning:

Dallas Parkway (Dallas North Tollway)

**Ending:** 

MAPSCO: Project Length: 0.00

14D

N/A (Intersection)

Avg. Posted Speed: N/A

Avg. Operating Speed: N/A

Traffic Volume: 58,103 - Belt Line Rd.

31,804 - Dallas Pkwy. Traffic Volume Source: Count 8/99

# of Correctable Accidents: - 22

Functional Classification: F

(over past 3 years)

Proposed

Belt Line - 3, Dallas Pkwy - 3

Belt Line - 2, Dallas Pkwy - 2

Belt Line - 1, Dallas Pkwy - 1

Belt Line - Y, Dallas Pkwy - Y Belt Line - 0, Dallas Pkwy - 0

**Description of Proposed Improvement(s):** 

Sidewalks - Belt Line - S, Dallas Pkwy - 0

Bicycle lanes - Belt Line - 0, Dallas Pkwy - 0

Through lanes - Belt Line - 3, Dallas Pkwy - 3 Left turn lanes - Belt Line - 1, Dallas Pkwy - 1

Right turn lanes - Belt Line - 1, Dallas Pkwy - 1

The project will allow the simultaneous operation of left turn lanes for east/west traffic and for north/south traffic. Efficiency of the intersection will be improved by 15 to 20%. The project consists of the removal of existing pavement, medians and bridge parapet walls, installation of concrete drill shafts and cantilever bridge bents, reconstruction of existing retaining walls, construction of additional bridge deck and parapet walls, construction of right-turn lanes, construction of dual left-turn lanes and installation of new traffic signals. Traffic signals will be timed with other signals on Belt Line Road which are covered by another project. Associated work includes traffic control during construction, pavement markings and signing. Even though this project is located in the City of Dallas, Addison is willing to fund the project as it will improve traffic flow on Belt Line Road within the Town. It will also benefit the Dallas North Tollway by improving traffic flow on Dallas Parkway. DART busses will benefit from this project as well. This project is an example of regional cooperation where one Town is willing to fund a project of regional significance (see attached drawing). The two projects that were approved for funding under TEA-21, on Belt Line Road west of Dallas Parkway, underscore the need for this project. For this intersection, we have had 112 accidents over the past 3 years. We estimate with this project, accidents will be reduced by 20%. This is our number 1 priority project for this program.

## PROJECT COST INFORMATION

**Total Project Cost:** \$2,500,000 Right-of-way Cost: \$ 170,000 **Engineering/Design Cost:** \$ 240,000 **Utility Cost:** 30,000 **Construction Cost:** \$2,060,000

**Local Cost Contribution:** 

\$
